Progressing national SDGs implementation:

An independent assessment of the voluntary national review reports submitted to the United Nations High-level Political Forum on Sustainable Development in 2017

The Second Edition in annual series commissioned by civil society organizations
Annex 1. VNR reports reviewed

All VNR reports are available through the United Nations Sustainable Development Knowledge Platform.

Table A1. Provides an overview of the countries reviewed. Aruba, Curaçao, Sint Maarten and the Netherlands submitted a joint report, making the number of countries reporting at the 2017 HLPF 45. Of these countries, six are low-income, ten lower-middle-income, 11 upper-middle-income and 18 are high-income countries – according to World Bank country classifications.

An equal number of the countries reviewed are from Asia and Latin America and the Caribbean\(^1\) with 14 each according to United Nations classifications. Countries from Europe make up the next largest share at ten, while the seven African countries reporting are from sub-Saharan Africa.

---

\(^1\) Three of the 14 Latin America and Caribbean countries are from the Caribbean.

1  According to UN classifications.
2  According to UN classifications.
3  According to World Bank classifications for the 2018 fiscal year.
Annex 2. Methodology

A2.1 Research team
The research was led by Shannon Kindornay, Independent Consultant and Adjunct Research Professor at Carleton University. Ms. Kindornay developed the framework for analysis, building on the pillars of analysis in the 2016 review. More specifically, this second edition builds on the eight pillars of analysis from the first edition by adding two more that focus on partnerships to realise Agenda 2030 and the means of implementation. It also provides an annex (Annex 3) of two-page profiles for the country VNR reports reviewed. She reviewed 31 of the English language reports, managed contributions from other members of the research team and carried out the analysis that informs this review.

Javier Surasky, Governance for Development Research Area Coordinator from the Centro de Pensamiento Estratégico Internacional, CEPEI reviewed 11 reports for Latin America and the Caribbean3 (all Spanish reports with the exception of Belize and Brazil), provided written inputs to the review, including best practice case studies for the region and country profiles, and commented on a draft version of the report. Nathalie Risse, Thematic expert on the 2030 Agenda for Sustainable Development of the International Institute for Sustainable Development (IISD), reviewed the French reports for Benin, Luxembourg, and Monaco, prepared the country profiles and provided comments on a draft version of the report.

A2.2. Research approach
With the exception of Belarus, the research team examined all VNR reports to the HLPF in 2017, according to the framework outlined in Table A2.1. The framework includes ten pillars of analysis:

1. Incorporation of the 2030 Agenda into National Frameworks and Policies
2. Leadership, Governance and Institutional Mechanisms
3. Baseline or Gap Analysis
4. Integration and Policy Coherence
5. Leave No One Behind
6. Raising Awareness and Creating Ownership of the 2030 Agenda
7. Stakeholder Engagement in the Development of National Priorities and Follow-up and Review Processes
8. Implementing the 2030 Agenda
9. Partnership to Realise the SDGs
10. Measurement and Reporting

---

2 Cutter, 2016.
3 Argentina, Belize, Brazil, Chile, Costa Rica, El Salvador, Guatemala, Honduras, Panama, Peru, and Uruguay.
In addition to these pillars, the framework includes an assessment of the extent to which countries followed the Secretary General’s common reporting guidelines. The framework was initially tested against four VNR reports. Minor revisions where then made to the framework, largely in the form of options for set-answer questions and the addition of more components of analysis. For open ended components of the analysis (instances in which researchers could not provide a set answer such as yes or no), text was drawn directly from the VNR reports to ensure the highest level of accuracy. In some cases, researchers paraphrased information when the text from VNR reports was more than 200 words. In addition, information from available civil society reports was also included in the framework. For set answer components, relevant information was listed in a ‘notes’ section of the framework. For open ended components, text from civil society reports is available directly following the text from VNR reports. To ensure consistency in the analysis, all data was reviewed by the lead researcher and clarifications were sought from the research team where necessary.

**A2.3 Data sources**

All reports are available through the United Nations Sustainable Development Knowledge Platform. The analysis presented in this review is based solely on official VNR reports and where available, civil society reports. Secondary literature was used in a limited number of instances to show consistency between the analysis in the review and those carried out by others. No additional research was conducted to verify the accuracy and confirm the validity of the information governments included in their reports. This is a clear limitation of the findings.

Civil society reports are available for 18 of the countries reviewed in 2017. Reports for Argentina, Bangladesh, Brazil, Chile, Czech Republic, India, Japan, Kenya, Luxembourg, Malaysia, Nepal, Nigeria, Thailand, The Netherlands, Togo, and Zimbabwe can be found on the Action for Sustainable Development website. In some cases, more than one organisation responded to the survey prepared by Action for Sustainable Development on 2030 Agenda implementation and the VNR or an additional shadow report was prepared. India and Nepal have two reports each as a result. Spotlight reports were prepared for Bangladesh, Brazil and Kenya available on the website. In addition, Cyprus and Denmark included a civil society report in the annex of their VNRs reports, while Slovenia included a chapter in its report written by the National Youth Council of Slovenia, outlining youth priorities for the SDGs. Nigeria’s VNR report included a CSO validation statement as an annex.

Annex 3. Country Profiles

A3.1 Overview of country profiles
The review provides an aggregate analysis of the key findings for the 45 countries examined. As such, with the exception of the best practice case studies, there are limited references to individual country progress against the pillars of analysis that make up the review.

This annex presents two-page profiles for all 45 countries according to the pillars of analysis of the review. As much as possible, the information presented in the profiles is drawn directly from country VNR reports with edits made for readability, and information summarised where necessary to limit the profiles to two pages. The country profiles necessarily provide only a summary of where countries stand vis-à-vis the pillars. The information presented is selective and used to illustrate, as much as possible, the overall state of 2030 Agenda implementation as outlined in the VNR report, as well as best practice. Where available, country profiles include civil society validity check statements, which have been used selectively to indicate instances where information diverges from government and civil society reports.

A3.2 The traffic light system
Each country profile includes a traffic light that indicates the extent to which the country followed the Secretary General’s common reporting guidelines. All countries were rated according to the following system for each of the 14 components in the guidelines:

- The report addresses this component as instructed in the guidelines
- The report addresses this component to some extent in this or another section of the report but does not fulfil the brief as laid out in the guidelines
- The report does not address this component

- Green indicates that the country included 11 or more of the 14 components set out in the guidelines, and half or more of the components were fully met as per the guidelines.
- This rating drops to yellow for countries that included 11 or more components, but met less than half fully. Yellow is reserved for countries that included between eight and ten of the components, with more than half of those included fully met.
- This rating drops to red for countries that included between eight and ten components, but met less than half fully. Red indicates that the country included seven (or half) of the components or less.
Afghanistan – Green

In 2017, Afghanistan submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
The government reported that it has incorporated the Sustainable Development Goals (SDGs) into national policies through the Afghanistan National Peace and Development Framework. The framework outlines immediate and long-term development priorities, key reforms and priority investments needed to achieve the SDGs. Generally, the government’s policy is to align what it calls Afghanistan-SDGs’ targets and indicators with national policies, strategies and development plans. There are 10 National Priority Programmes. The VNR report does not mention the principles of universality, a human rights-based approach or leaving no one behind.

Leadership, governance and institutions
Under the president’s leadership, Afghanistan is making use of an existing council, the High Council of Ministers, to oversee the SDG nationalisation, alignment and implementation process. The SDGs Secretariat, which was established within the Ministry of Economy, prepares national documentation, coordinates development efforts across sectors and reports on these efforts semi-annually and annually to the High Council of Ministers and Cabinet. Commissions and technical working groups have been formed to support implementation. An Executive Committee on the SDGs will be established within the Office of the Chief Executive to issue recommendations and practical solutions to the Economic Committee of the High Council of Ministers, which is chaired by the Ministry of Economy. The High Council of Ministers is expected to engage with non-state actors. Representatives of non-state actors are included in technical working groups.

Baseline or gap analysis
The High Council of Ministers tasked all government budget entities and stakeholder technical committees to review the SDG targets and indicators and adjust them to the national context and development priorities. Afghanistan has 125 national targets and 190 national indicators.
Integration and policy coherence
The VNR report reviews a limited set of SDGs by focusing on the High-level Political Forum theme "Eradicating poverty and promoting prosperity in a changing world" goals (SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure and SDG 17 on partnerships for the goals) and excludes SDG 14 on life below water (Afghanistan is landlocked). The report provides a detailed assessment of the goals, but makes limited references to the linkages between them and has a limited focus on the environmental dimension compared to the economic and social dimensions of sustainable development. Policy coherence for sustainable development is not mentioned, but the report notes that the government is working on the formulation of standard concepts, mechanisms and strategies to ensure policy coherence and the integration of the SDGs into development plans.

Leave no one behind
Although it does not mention leaving no one behind, the report notes that special priority will be given to ensuring that girls and women, people with disabilities, young people, ethnic minorities and people affected by conflict and crisis are enjoying well-being and not suffering from extreme poverty. The report mentions the launch of a whole-of-government policy to create a favourable environment for the sustainable realisation of Afghanistan’s constitution and thus enable the government to deliver on the rights and obligations befitting the equal citizens of a democratic polity.

Raising awareness, creating ownership
The report mentions that the Ministry of Economy conducted a series of constructive consultation and awareness-raising programmes for provincial departments and influential stakeholders at the sub-national level and will continue to do so. During the nationalisation process, the government divided the 17 SDGs into eight socio-economic sectors (security, education, health, governance, infrastructure, social protection, agriculture and rural development, economic) to simplify planning and implementation processes for relevant institutions. Although efforts have been largely at the national level, the report notes that national targets and indicators will be adjusted at the provincial level.

Stakeholder engagement
To develop national targets and indicators and prepare the VNR report, the report states that a series of national consultation conferences, seminars, meetings and workshops were held. Government institutions, experts, local governments, parliament, academia, civil society organisations and the business community took part. The report notes that strong engagement of stakeholders led vibrant awareness-raising campaigns and needs to be continued going forward.

Implementing the 2030 Agenda
The report notes a number of challenges for SDG implementation, including financing, formalising cross-sector partnerships, localising the SDGs, data availability and management, and monitoring and evaluation. The Afghanistan-SDGs will be incorporated into the budget planning process at the national and sub-national levels for annual development projects. Afghanistan is a donor-dependent country with 95% of its development budget coming from donors. There is a need for the government and development partners to make more progress on following globally agreed principles for aid effectiveness.

Partnership to realise the SDGs
The report recognises the importance of partnerships and notes that the government supports funding modalities that foster stronger collaboration among civil society, academia, youth, groups promoting gender equality, the business sector, development partners, United Nations agencies and other relevant institutions. However, it does not lay out specific initiatives and partnerships with different sectors to realise the SDGs, aside from awareness-raising events with universities and youth organisations.

Measurement and reporting
The report does not provide an indication of the availability of data but notes that generating accurate data is challenging due to a lack of technical capacity, inadequate resources and insecurity in the country. Efforts have been made to improve coordination in the national statistical system and the accuracy of data.

Government institutions will report their SDG efforts to the Ministry of Economy, which will then prepare standard progress reports annually and semi-annually for the High Council of Ministers, Cabinet and United Nations. The government plans to establish a SDG repository and web-based data system. In doing so, the existing results-based monitoring and evaluation system and Millennium Development Goal data repository within the Ministry of Economy will be fully utilised.
In 2017, Argentina submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government has made significant progress on aligning the Sustainable Development Goals (SDGs) with its national priorities, institutionalising them and monitoring their progress. The president’s political will is highlighted as a key asset. Although Argentina has no national development plan, the SDGs are aligned with eight government priorities: macroeconomic stability, establishment of a national productivity agreement, development of infrastructure, sustainable human development, the fight against drug trafficking and improvement of security, institutional strengthening, modernisation of the government, and intelligent participation in the world.

The report considers human rights as a main issue in the SDG adaptation and implementation processes. The report also highlights that, while the 2030 Agenda for Sustainable Development includes the SDGs, it is important not to lose sight of the vision, principles and means of implementation set forth in the Declaration.

**Leadership, governance and institutions**
The National Council for the Coordination of Social Policies, under the office of the president, was created in 2002. It led the national Millennium Development Goal implementation process and was appointed the main institution for leading SDG implementation and localisation at the national level. The council receives inputs from non-state actors such as civil society, academia and the private sector.

**Baseline or gap analysis**
According to the report, the government carried out an assessment for some SDGs and established baselines for their follow-up. The procedures followed to establish baselines are not fully explained in the report, which refers to them in a broad way.

**Integration and policy coherence**
Even though it mentions the economic, social and environmental dimensions of sustainable development and their inter-linkages, the report does not provide details on how they were taken into account in the process of defining national goals and targets.
The government recognises the value of policy coherence for SDG implementation and considers the fight against poverty to be a cross-cutting issue around which policy coherence must be built.

The report does not include an assessment of the impact of domestic or foreign policies on SDG outcomes but reflects on how the 2008 global financial crisis has affected Latin America generally and Argentina specifically. South-South cooperation is considered a way to support partners’ efforts to implement the SDGs.

Leave no one behind
The report mentions leaving no one behind in a few places but does not go into detail on existing inclusive approaches or how the principle might be achieved in SDG implementation at the national level. It offers only very general data on the current status of vulnerable and marginalised groups in the country. To ensure that no one is left behind, the report notes that implementation must incorporate the 2030 Agenda’s preamble, vision, shared principles and commitments, means of implementation, and follow-up and review.

Raising awareness, creating ownership
The report includes references to different meetings organised by the government to raise awareness about the SDGs and the 2030 Agenda in partnership with civil society, academia, the private sector and local governments. The country is undertaking a process of defining national goals, targets and indicators that involves all ministries, working together in six clusters: education; science and technology; sustainable agricultural production; housing, habitat, urban development and infrastructure; labour and employment; and social protection. Each cluster is responsible for proposing national versions of a predefined set of global SDGs and possible national indicators. At the same time, the government signed framework agreements with nine provinces and is working with municipalities on implementation.

Stakeholder engagement
The report discusses meetings with representatives of civil society and inputs from the private sector and academia. A civil society report was prepared in response to global civil society platform Action for Sustainable Development’s civil society questionnaire on engagement in SDG implementation and the VNR process. The United Nations Global Compact Network Argentina identified five SDGs on which the country’s private sector is highly engaged: SDG 8 on decent work and economic growth, SDG 9 on industry, innovation and infrastructure, SDG 12 on responsible consumption and production, SDG 13 on climate action and SDG 17 on partnerships for the goals.

Implementing the 2030 Agenda
The report highlights the case of actions undertaken by the municipality of Vicente López in Buenos Aires Province as best practice. It identifies lessons learned about appropriation and institutionalisation, the global-local balance, linkage with multiple international initiatives, the indivisibility and integrity of the SDGs, operationalisation of abstract goals, opportunities to strengthen statistics, and coherence in implementation and follow-up processes. National challenges are also identified, such as improving monitoring capacities, reducing inequalities and gaps, mobilising the means of implementation, and establishing multi-stakeholder approaches.

BEST PRACTICE SPOTLIGHT
The local government of Vicente López decided to focus on three priorities, namely health, education and the fight against poverty, link each to SDG targets and implement policies and programmes based on the 2030 Agenda. As a result, Vicente López has achieved a significant decrease in its infant mortality rate.

Partnership to realise the SDGs
The report underscores the role of non-state actors in SDG implementation. In mid-2016, the government and Interuniversity National Council agreed to initiate a process towards integrating the SDGs into university activities.

Measurement and monitoring
The report analyses data availability for each SDG as well as links between the SDGs and the government’s goals set by the president. The report recognises that data gaps and methodological weaknesses exist and will be considered in the National Statistical Plan. No further details are provided. Nonetheless, the report stresses the key role of the national statistical office. It does not mention how the government will report at the national level.
In 2017, Aruba submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development as part of the submission by the Kingdom of the Netherlands, of which it is a constituent country.

**Incorporating the SDGs**
At the time of the High-level Political Forum, the VNR report notes that Aruba was in the process of finalising a roadmap for Sustainable Development Goal (SDG) implementation that will allow it to identify areas requiring further attention. A field mission provided details on the current situation with regard to the SDGs at the national level, using the United Nations’ Mainstreaming, Acceleration and Policy Support approach. The report includes a commitment to leaving no one behind but does not mention universality or the human rights-based nature of the 2030 Agenda for Sustainable Development.

**Leadership, governance and institutions**
In January 2017, Aruba established a National SDG Commission consisting of representatives of the Ministry of General Affairs and Department of Economic Affairs, Commerce and Industry. The commission is tasked with coordinating SDG implementation in the country. It works closely with non-state actors, but they are not formally represented. Aruba also participates in regional SDG-related activities including through partnerships. Aruba stated that it is working on overcoming the limitations to sustained and sustainable development confronted by small island developing states, including through the Small Island Developing States Accelerated Modalities of Action Pathway.

**Baseline or gap analysis**
In addition to the field mission, Aruba is preparing to have its statistics bureau draw up a baseline measurement of SDG status. Its report will highlight areas where implementation is lagging behind and clarify where political decisions need to be made. Preliminary findings show that existing policies address over 80% of SDG indicators.
Integration and policy coherence
The report covers all SDGs except SDG 1 on no poverty, SDG 8 on decent work and economic growth and SDG 10 on reduced inequalities. Only summary information is provided and for some goals, the summary is a paragraph or less with limited information on progress. Nevertheless, the report gives equal attention to the economic, social and environmental dimensions of sustainable development, though it makes limited references to the linkages between dimensions in the analysis of goals. The report makes reference to policy coherence for development and each subsection in the review of SDGs discusses implementing the SDGs at home and abroad, though information is provided at a summary level with limited details.

Leave no one behind
There is no information on who is at risk of being left behind in Aruba or the status of data to ensure no one is left behind. However, the report notes Aruba’s aim to ensure social well-being and good living standards for everyone in a sustainable and inclusive future. Aruba is combining sustainable economic growth, social equity and environmental awareness in order to enhance quality of life, raise living standards for all and ensure that no one is left behind.

Raising awareness, creating ownership
To foster awareness of the SDGs, a website (www.sdgaruba.com), Facebook page (https://www.facebook.com/SDGAruba/) and Twitter account (@SDGAruba) were established. These are used to share information with the population on the SDGs and Aruba’s implementation of the 2030 Agenda.

Aruba has established an indicator working group to assess the relevance of the SDG indicators and localise them, but national priorities had not been selected at the time of reporting.

Stakeholder engagement
Although the report notes that the field mission on the current status of SDGs in Aruba included discussions with non-state actors, there is no further information on consultation during the nationalisation or VNR processes.

Implementing the 2030 Agenda
The report notes that collaboration between different sectors is an ongoing challenge, which sometimes requires external support and an exchange of lessons learned between countries. It mentions that SDG implementation must be further aligned with existing policies.

There is no Aruba-specific information for most sections on means of implementation in the report. However, to the extent that Aruba contributes to the Kingdom of the Netherlands’ international development efforts, the combination of foreign trade and development cooperation is highlighted as a positive contribution. Aruba is also committed to close cooperation with the kingdom and international partners to enhance security, peace and prosperity within its region.

Partnership to realise the SDGs
The report notes that Aruba is actively involving as many stakeholders as possible in SDG implementation. The National SDG Commission conducted a survey of stakeholder involvement around the themes of people, planet, prosperity, peace and partnership. Aruba will continue to involve the private sector, trade unions and civil society organisations in consensus-based decision making on major policy issues.

Aruba signed the United Nations Multi-Country Sustainable Development Framework for the Caribbean. The framework guarantees national ownership while promoting regional synergies in implementing the SDGs. It primarily focuses on priority areas for the Caribbean. It gives countries a platform to access the United Nations system’s global expertise and experience at both the national and regional levels.

Measurement and reporting
Aruba does not provide an indication of data availability, including disaggregated data, to monitor progress on the SDGs. It attaches importance to underpinning the SDG with indicators, though more technical support is required and financing this process remains a challenge.

The report refers to annual reporting on the SDGs but does not elaborate on how such reporting will occur.
Azerbaijan- Green

**Incorporating the SDGs**

The Sustainable Development Goals (SDGs) have not been formally incorporated into Azerbaijan’s national policies, though they are included in the United Nations-Azerbaijan Partnership Framework (2016-2020). The government plans to develop an appropriate action plan to coordinate policies and activities related to the SDGs and make more efficient use of available resources and opportunities. The report refers to a human rights-based approach, universality and leaving no one behind as principles in SDG implementation.

**Leadership, governance and institutions**

By presidential decree, Azerbaijan established the National Coordination Council for Sustainable Development. Its responsibilities include identification of national priorities and relevant indicators, ensuring alignment of government programmes and strategies with the SDGs, and preparation and submission of national progress reports. The council is supported by a secretariat and four working groups (on economic development and decent employment, social issues, environmental issues, and monitoring and evaluation) that include representatives of non-state actors, namely relevant ministries, academia and research institutions, non-governmental organisations, the private sector and international partners. The country is considering establishing a multi-stakeholder group to improve engagement with non-state actors.

**Baseline or gap analysis**

Working groups have reviewed existing strategies, programmes and policy documents for compliance with the SDGs and prepared plans to close gaps. The goal-by-goal analysis in the report generally outlines efforts that should be taken going forward, rather than identifying gaps in terms of targets or priority issues.

**Integration and policy coherence**

The report looked at High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. While the economic, social and
environmental dimensions of sustainable development were all included, the report has a relatively greater focus on economic aspects. There are limited references to different dimensions of sustainable development in the goal-by-goal analysis. Policy coherence for sustainable development is not discussed. However, the report outlines an approach to policy coherence that encourages coordination of activities and policies between government institutions.

Leave no one behind
Additional data are required for Azerbaijan to meet the commitment to leave no one behind. Vulnerable groups include refugees and internally displaced people, the elderly, people with disabilities, children and youth, and women. Taking into consideration vulnerable groups, Azerbaijan is reevaluating measures to support development, and opportunities and resources to overcome gaps and plan more efficiently for the use of resources.

Raising awareness, creating ownership
Although several conferences and events were held that provided information on the SDGs to non-state actors and parliamentarians, more work is needed. With partners, the government intends to create an online portal that raises awareness about national and global SDGs, targets, implementation phases and indicators. The portal will be used for consultation and reporting.

Notwithstanding existing national priorities, Azerbaijan plans to finalise the nationalisation of the SDGs by the end of 2017 and integrate them into national policies, plans and budgets. The government started the implementation process by adapting the SDGs to local conditions and setting baselines, targets and indicators. According to the report, close attention is being paid to ensuring the inclusion of national, regional and local government executive bodies in SDG action plans given their prominent role in implementation.

Stakeholder engagement
The report notes that consultation took place on national priorities through the working groups under the Coordination Council for Sustainable Development. The VNR process was guided by the National Coordination Council for Sustainable Development secretariat and working groups.

Implementing the 2030 Agenda
The report identifies strengthening institutional capacities for implementation as best practice based on Azerbaijan’s experience with the Millennium Development Goals. Key challenges for the country include the lack of detailed indicators for several areas and disaggregated data availability. The report notes that the aggression policy of Armenia continues to hinder Azerbaijan’s ability to make greater achievements. In terms of learning from others, Azerbaijan welcomes ongoing discussions on the nationalisation of the SDGs, coordination procedures and tracking implementation. It is also interested in ways to establish effective multi-stakeholder partnerships.

In terms of means of implementation, the report mentions Azerbaijan’s contributions through South-South cooperation, including scientific and technical capacity development. It notes the need to identify Azerbaijan’s needs and opportunities for capacity development, with improving statistical and institutional capacity as well as the capacities of civil society organisations to engage in the SDGs being highlighted.

Partnership to realise the SDGs
According to the report, partnerships have yet to be developed with a broad range of stakeholders, though some specific projects with civil society are mentioned. It notes that the government, while acting as coordinator for the attainment of nationalised SDGs, will be facilitating and supporting SDG-focused initiatives of civil society organisations, academia, business and professional associations, other stakeholders and partners. In terms of development partners, Azerbaijan expects that they will support its efforts in the development and diversification of the non-oil sector of the national economy, strengthening export capacity, improving the efficiency of health care and social services, and strengthening environmental protection. The VNR report was prepared with support from the United Nations Development Programme.

Measurement and reporting
The national statistical office indicates that 70 SDG indicators can be reported based on official statistical data, though administrative data may cover an additional 30 indicators. Azerbaijan needs to strengthen capacity for generation and analysis of disaggregated data. There is a need for the country to expand the coverage and depth of national information systems relating to the SDGs and improve statistical coordination. The United Nations Development Programme is currently providing support in this area. The government plans to prepare annual VNR and periodic progress reports to be submitted to the country’s leadership and the High-level Political Forum.
Bangladesh - Green

In 2017, Bangladesh submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

According to the government, Sustainable Development Goal (SDG) priorities are reflected in the medium-term development plan, the Seventh Five Year Plan (2016-2020), which came out almost simultaneously with the 2030 Agenda for Sustainable Development. A SDG Action Plan is being developed, with government institutions identifying projects and initiatives linked to SDG targets. Ministries are also preparing action plans. The government is in the process of integrating SDG targets into its Annual Performance Agreements system so that long-term objectives can be translated into annual work plans for ministries.

**Baseline or gap analysis**

Although the report indicates that an assessment was carried out in terms of mapping available data and examining policies against the SDGs, no further details are provided. Only some goal analyses outline gaps or challenges.

**Leadership, governance and institutions**

An Inter-ministerial SDGs Implementation and Monitoring Committee was formed at the Prime Minister’s Office. The General Economics Division of the Planning Commission serves as the secretariat. The position of principal coordinator (SDG affairs) was created to head the committee. The VNR report does not mention formal inclusion of non-state actors in the committee.

**Civil society validity check**

A civil society report notes the importance of focusing on inequality in SDG implementation. The report cautions the government in its use of an export-led growth paradigm, encourages greater investment in social services and criticises international financial institution policy conditions that hinder policy space for the government.

**Integration and policy coherence**

The report examines the High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good
health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. The report gives equal attention to the economic, social and environmental dimensions of sustainable development and makes references to applicable linkages between them in the goal-by-goal analysis. It does not mention policy coherence for sustainable development.

Leave no one behind
Bangladesh requires additional data to meet the commitment to leave no one behind. The report notes that ethnic minorities, tribal communities, women, children, the elderly and people with disabilities are at risk of being left behind. It mentions the establishment of a comprehensive National Social Security Strategy to consolidate all safety net programmes to support citizens who are most in need. Those left behind have been given priority under the strategy, which is contributing to poverty reduction and reducing inequality. In addition, the report includes an annex with specific initiatives to leave no one behind, including a range of social and economic initiatives to support people with disabilities and the expansion of financial and information and communications technology services to all.

Raising awareness, creating ownership
The government translated all the SDGs, targets and indicators into Bengali and made the translation widely available in government offices all over the country. National priorities have been selected, including poverty (SDG 1), hunger (SDG 2), health (SDG 3), education (SDG 4 on quality education), gender (SDG 5), water and sanitation (SDG 6 on clean water and sanitation), power (SDG 7 on affordable and clean energy), growth and employment (SDG 8 on decent work and economic growth), infrastructure development (SDG 9), inequality (SDG 10 on reduced inequalities), urbanisation (SDG 11 on sustainable cities and communities), environment and climate change (SDG 12 on responsible consumption and production, SDG 13 on climate action, SDG 14 and SDG 15 on life on land) and governance (SDG 16 on peace, justice and strong institutions). The government wants to encourage inclusive and enhanced stakeholder participation for local-level ownership. Currently, there is limited engagement at the local level.

Civil society validity check
A civil society report underlines the need to strengthen the democratic process and institutions to create an enabling environment for an inclusive process and participatory governance, including spaces for civil society at all levels.

Stakeholder engagement
According to the report, Bangladesh adopted a “whole of society” approach to ensure wider participation in formulation of a SDG Action Plan and implementation of the SDGs. For the VNR process, the government shared a draft VNR report with government institutions, the national statistical office, civil society organisations, non-governmental organisations, youth organisations, members of marginalised segments of society, the private sector, development partners, academia and the media to ensure that it contained diverse opinions and evolved as an inclusive national document.

Implementing the 2030 Agenda
According to the report, challenges identified by the government include mobilising resources, ensuring effective and efficient resource utilisation, enhancing non-state actors’ engagement, improving data availability and management, and localising the SDGs. Technology is identified as a constraint.

A preliminary assessment indicates that Bangladesh may require around US$1.5 trillion worth of additional resources for full implementation of the SDGs. The country has identified public and private national and international sources of finance. The report notes the important roles of South-South cooperation and official development assistance, the latter of which has declined. It stresses the importance of trade packages for developing countries to enable SDG implementation.

Partnership to realise the SDGs
The report highlights the government’s consultation initiatives with different stakeholders on how they can support SDG implementation. It particularly notes the role of development partners in supporting climate change-related efforts in Bangladesh.
BEST PRACTICE SPOTLIGHT
Bangladesh’s government held several consultations with members of parliament to seek guidance in localising the SDGs and their targets. The honourable speaker of the parliament proposed to form several committees comprising of members of parliament to work on specific goals and targets and provide regular suggestions and guidance to the government.

Measurement and reporting
A review of data indicates that Bangladesh has available data for 70 global SDG indicators and partially available data for 108 indicators. The discussion of each SDG in the report provides an overview of data availability. The report notes efforts to establish a national repository for all kinds of disaggregated data including data disaggregated by gender, age, income and geographic location. Going forward, the capacity of the national statistical office will need to be enhanced. To facilitate the results-based monitoring system within government, a macro-level data repository system called SDGs Tracker is being prepared. The report does not mention plans for national reporting.
Belgium – Yellow

In 2017, Belgium submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
The government’s first National Sustainable Development Strategy was approved in 2017. It focuses on the implementation of the 2030 Agenda for Sustainable Development in Belgium and aims to create the basis for a coherent approach to sustainable development policies. Belgium recognises the universal, human rights-based nature of the 2030 Agenda and the importance of leaving no one behind.

Leadership, governance and institutions
The Inter-Ministerial Conference for Sustainable Development is composed of federal, regional and community ministers responsible for sustainable development and development cooperation. It serves as the central coordination mechanism for dialogue between the various federal and provincial authorities implementing the 2030 Agenda in Belgium. Institutional mechanisms exist at the federal and provincial levels to support sustainable development as a result of Belgium’s pre-existing commitments to sustainable development prior to the adoption of the SDGs. Leadership resides with multiple cabinet ministers at the federal level and at the level of the minister-president or a specific cabinet minister for provinces. Non-state actors are not formally part of governance arrangements, though Belgium has a longstanding tradition of involvement and consultation with civil society through formal consultation mechanisms.

Baseline or gap analysis
The government sees the VNR report as the “first edition” and primarily as a stocktaking exercise. The report is a starting point that provides a partial baseline and a benchmark for: guiding further action in a federal context with multiple decision makers and hence multiple priorities per policy area; future gap analysis, progress monitoring and impact assessment; improving collaboration with civil society; and strengthening accountability towards national and provincial parliaments, civil society and the population. Analysis of each SDG includes identification of priority areas where further progress is needed.
Integration and policy coherence

With individual analyses of all SDGs and a statistical annex, the report is comprehensive. The analysis of goals tends to focus on initiatives taken at different levels of government and by non-state actors. The report also focuses on domestic and international dimensions of the 2030 Agenda, providing equal attention to the economic, social and environmental dimensions of sustainable development, with references to linkages between goals.

Policy coherence for sustainable development is mentioned in the report and the government notes a range of institutional mechanisms that have been established to promote coherence.

Leave no one behind

Belgium’s efforts to leave no one behind consider who is being left behind in the country as well as globally. Informed by existing data, the government identifies low-skilled people, single-parent households, people living in very low work intensity households and people with a migration background as at risk of being left behind. Young people and families with three or more dependent children are also at a higher risk of poverty. Efforts that specifically target leaving no one behind are noted in some of the goal analyses. The fight against inequality is cross-cutting for Belgium and discussed across goals. In recent years, social protection systems have been working to further reduce inequalities, such as by increasing the minimum pensions of self-employed workers to reduce the gap between their pensions and those of other types of workers.

Raising awareness, creating ownership

Belgium is stepping up SDG advocacy efforts. A notable example is a website (www.sdgs.be) that serves as a registry for SDG-related initiatives and aims to inform and engage the population, associations and authorities. About €20 million is spent annually to inform the population about the SDGs and involve people in realising various goals and targets.

Priorities at the national level include sustainable food, sustainable building and housing, sustainable public procurement, means of implementation, awareness raising and contributions to the follow-up and review of the SDGs. Local governments – cities, municipalities and provinces – are involved in SDG implementation with efforts that are outlined throughout the report.

Stakeholder engagement

An important new feature of the National Sustainable Development Strategy is a commitment to engage in a broad dialogue with the most prominent stakeholders including civil society, the private sector and parliaments in SDG reporting at the national level. The government will prepare a report offers an opportunity for stakeholders to provide input on priorities. According to the government, non-state actors were involved in preparing the VNR report.

Implementing the 2030 Agenda Civil society representatives who were consulted in the context of the VNR process indicated that they expect additional attention from all relevant policy makers to Belgium’s challenges, including lifelong learning, water and air quality, energy intensity and renewable energy, greenhouse gas emissions, people at risk of poverty, and mobilisation of the necessary means of implementation. The report notes that Belgium requires more efforts to increase official development assistance and aims to be designated a Fair-Trade Country by 2020.

BEST PRACTICE SPOTLIGHT
Belgium’s VNR report was discussed in the federal parliament during a joint session of its Committees on Foreign Relations, Environment and Health.

Partnership to realise the SDGs

Parliaments at the federal and provincial levels are currently studying how to engage more on the SDGs. Efforts are underway to make sure the universal and integrated character of the 2030 Agenda can be more adequately reflected in parliaments’ role in holding executives to account. The report outlines specific initiatives by civil society organisations and other non-state actors in the analysis of each goal.

Measurement and reporting

Roughly half of the SDG indicators are currently available for Belgium. Data for many indicators can be disaggregated by sex, age, income and education level. Additional indicators will be progressively added to monitor progress on the SDGs.

The National Sustainable Development Strategy commits all authorities involved to jointly prepare a report on the implementation of the 2030 Agenda twice per government term, including in dialogue with non-state actors and parliamentarians.
In 2017, Belize submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government adopted a long-term development strategy called Horizon 2030: National Development Framework for Belize 2010-2030, which is built on four pillars: democratic governance, education, economic resilience, and healthy citizens and a healthy environment. The VNR report is unclear about whether the development strategy takes into account the principles of the 2030 Agenda for Sustainable Development, namely human rights, universality or leave no one behind.

**BEST PRACTICE SPOTLIGHT**
The VNR report presents the Building Opportunities for Our Social Transformation (BOOST) programme as good practice. BOOST is a World Bank-validated co-responsibility cash transfer programme and food pantry scheme that establishes a coordinated social safety net arrangement.

The government also drafted a medium-term strategy, Growth and Sustainable Development Strategy 2016-2019. This document, which situates sustainable development at its core, is considered the conceptual and institutional mechanism for implementation of the 2030 Agenda.

**Leadership, governance and institutions**
According to the VNR report, the government decided to implement and follow up on the 2030 Agenda through existing government institutions. The Policy and Planning Unit of the Ministry of Human Development and Sustainable Development Unit of the Ministry of Agriculture, Fisheries, Forestry, the Environment, Sustainable Development and Immigration, working in a coordinated manner, are the main institutions responsible for those tasks.

The report lacks references to how non-state actors will be engaged in Sustainable Development Goal (SDG) implementation governance arrangements and how the government will interact at the regional level to advance and strengthen implementation.
Baseline or gap analysis
The government did not carry out a baseline study or gap analysis. Nevertheless, the report makes broad references to gaps when analysing SDG 1 on no poverty and SDG 3 on good health and well-being without giving further details. The report also makes references to the existence of a data gap in the country without describing it.

Integration and policy coherence
The report only addresses four SDGs: SDG 1 on no poverty, SDG 3 on good health and well-being, SDG 5 on gender equality and SDG 14 on life below water. Even so, the medium-term strategy clearly considers development as a comprehensive process with social and environmental dimensions. Without references to policy coherence for sustainable development, the report mentions the links between the 2030 Agenda and Paris Agreement on climate change, but not the Addis Ababa Action Agenda on financing for development.

Leave no one behind
The principle of leave no one behind is not addressed in the report systematically. There is only a broad mention of it in the opening statement and a specific reference when analysing efforts to ensure gender parity in primary schools under SDG 5 on gender equality.

Raising awareness, creating ownership
According to the report, management challenges must be addressed to improve inter- and intra-ministerial collaboration and cooperation on raising awareness of the SDGs.

There are no concrete references to non-state actors’ involvement in the process of defining national goals, targets and indicators.

The government’s priorities set in the Horizon 2030 framework and adoption of global SDG targets and indicators as part of its Growth and Sustainable Development Strategy are introduced as primary steps in the localisation of the SDGs.

Stakeholder engagement
The report is unclear about whether and how stakeholders are participating in implementation of the 2030 Agenda. Only very general references to rural communities, political parties, women, youth and “other marginalised groups” are made. The only specific reference to a multi-stakeholder approach regards the Belize Enterprise for Sustainable Technology facilitating a consultative process for the drafting of the VNR report in which academic institutions, civil society organisations and representatives of United Nations agencies participated.

Implementing the 2030 Agenda
When referring to implementation of the 2030 Agenda, the report highlights various challenges: improving data collection and management; advancing the localisation of the SDGs; protecting the poor and most vulnerable groups in the context of rising levels of poverty and social exclusion, constrained fiscal space and institutional capacity gaps; scaling up access to neonatal care; overcoming the national dependence on foreign health-care workers; establishing new financing mechanisms for funding the national health insurance system and making it universal; stopping pollution from rising; overcoming the lack of legal enforcement and the population’s limited access to justice; and bringing more women into political life and managerial positions.

International public finance is the only means of implementation analysed in the report. According to the report, the economic environment leads the government to reduce budget allocations to ministries engaged in SDG implementation. As a consequence, the government must seek to improve partnerships with international public financing agencies and the private sector to ensure adequate resourcing. The report notes that a resource mobilisation strategy for SDG implementation was completed. The strategy is based on four axes: expenditure management, enhancing revenue generation, improving financial options, and better partnerships with the development community. No additional information is given.

Partnership to realise the SDGs
The report mentions civil society, academia and the private sector as partners in SDG implementation, but does not give specific details on how their work will be aligned or promoted by the government.

As a pilot country in the United Nations Department of Economic and Social Affairs’ Division for Sustainable Development’s national-level rollout of the 2030 Agenda, Belize is being supported by United Nations agencies in its first steps to implement the SDGs.

Measurement and reporting
Data availability to implement and follow up on the 2030 Agenda is unclear from the report. The government indicates that one of the next steps to be taken is strengthening national capacities for effective data collection and disaggregation.
Benin - Green

In 2017, Benin submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
In September 2016, Benin adopted a Sustainable Development Goal (SDG) implementation roadmap during a National High-level Seminar on SDGs and the Paris Agreement on climate change. The government developed a national SDG target prioritisation report, the results of which are expected to feed into various planning and programming documents, including the new National Development Plan 2018-2025 and its operational document, the Growth Programme for Sustainable Development.

Leadership, governance and institutions
Benin established a General Directorate for SDG Coordination and Monitoring in the Ministry for Planning and Development, which is responsible for, among other things, developing a progress report on SDG targets implementation and follow-up. The government also set up an orientation committee headed by the state minister for planning and development and a technical steering committee. Parts of a monitoring and evaluation mechanism for SDG implementation, these committees seek to ensure inter-sectoral coordination and alignment of strategic documents with SDG priorities. They are composed of representatives of the government, the private sector, civil society organisations and other stakeholders.

The government also has four thematic clusters that work on integrating the SDGs into national frameworks: the social cluster (focused on SDGs 1 to 6), the economic cluster (focused on SDGs 7 to 11), the environment cluster (focused on SDGs 12 to 15) and the governance cluster (focused on SDG 16). These clusters involve officials in charge of strategic planning and programming, in different sectors, as well as civil society representatives, decentralised communities, academics and technical and financial partners.

Baseline or gap analysis
Benin assessed the degree of alignment between 47 policy and strategy documents and the SDGs. The assessment revealed that approximately 70% of these key policies and strategies are aligned with the SDGs. It also highlighted the need to improve cross-sectoral synergies towards the SDGs and found that data were available for 46% of the 145 SDG indicators considered to be a priority for the country.
Integration and policy coherence
The VNR report examines all the SDGs, giving equal attention to the economic, social and environmental dimensions of sustainable development with appropriate linkages made between those dimensions. It does not mention policy coherence for sustainable development but outlines the need to work on improving cross-sectoral synergies as well as sectoral coherence in ministries.

Leave no one behind
The report outlines the need to target “vulnerable” and “marginalised” people in general, including children from the poorest families and women. It also calls for increasing investments in timely collection and analysis of disaggregated data to identify marginalised groups.

Raising awareness, creating ownership
The government organised more than 50 meetings seeking to discuss SDG relevance for the country. The meetings mobilised approximately 5,000 participants, including government officials, representatives of civil society, workers unions, youth, the private sector and academia, journalists, social media activists, parliamentarians, and technical and financial partners. According to the report, the SDG implementation roadmap, which was prepared by the government, outlines activities for information, education and communication around the SDGs.

Stakeholder engagement
In 2017, Benin carried out a SDG “prioritisation” process that involved representatives of government, the private sector and civil society, as well as technical and financial partners. The process resulted in the selection of 49 targets and 80 indicators, which are outlined in the VNR report and cover the 17 SDGs. From the VNR report, how non-state actors were involved in the development of the report is unclear.

Implementing the 2030 Agenda
The report indicates that the government intends to develop a resource mobilisation document for financing actions on sustainable development, which will be based on an assessment of the costs of implementing SDG priority targets selected by the country. It notes that the Government Action Programme 2016-2021 budget is currently used to operationalise the SDGs, and outlines the importance of global partnerships and bilateral, multilateral, South-South and triangular cooperation for resource mobilisation.

Among implementation challenges, the report outlines: the “governability” of the SDG process, such as coordination, expenditure, and monitoring and evaluation; the availability of statistical information; building capacity for implementing the SDGs, including at the local level; and effective financial resource mobilisation.

Partnership to realise the SDGs
The orientation committee includes representatives of civil society, the private sector, the “Youth Parliament,” and other stakeholders such as representatives of the National Association of Municipalities of Benin, of the Women’s Federation, and of the Associations of People with Disabilities. Non-state actors are also involved in the four thematic clusters. However, the report does not outline specific initiatives.

The report clearly highlights the need for partnership and cooperation (bilateral, multilateral, South-South and triangular) for resource mobilisation. Benin received support from technical and financial partners, including the United Nations Development Programme and the Food and Agriculture Organization of the United Nations, to prepare its VNR report.

Measurement and reporting
Benin’s national statistical system only provides data for 46% of the 145 indicators associated with the country’s priority targets. The report notes a lack of data for environment-related SDG indicators. It indicates that the government has been reviewing its National Strategy for the Development of Statistics in order to identify efforts needed to correct the “statistical gap” and plans to establish an updated database of indicators related to the environment.

With technical support from the Sustainable Development Goals Center for Africa, Benin also plans to set up a monitoring, evaluation and reporting mechanism that will cover all of the SDGs. The General Directorate for SDG Coordination and Monitoring is responsible for drafting SDG implementation and monitoring reports, which need to be approved by the chairman of the orientation committee, the state minister in charge of planning and development, before being issued more widely.
In 2017, Botswana submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

Botswana prepared a draft National Framework for Sustainable Development, which is intended to support and provide an overarching guide for integrating the principle of sustainable development into all government policies and strategies as well as the practices of government institutions and non-state actors. According to the VNR report, sustainability is also at the cores of Vision 2036 and the 11th National Development Plan. A National Sustainable Development Goals (SDGs) Roadmap was also prepared.

The report does not refer to the universal, human rights-based nature of the 2030 Agenda for Sustainable Development.

**Leadership, governance and institutions**

The government established a National Steering Committee that is co-chaired by the government and United Nations to implement the SDGs. The SDGs Secretariat is within the Ministry of Finance and Economic Development and supported by the United Nations. A Technical Task Force and four Thematic Working Groups were also established. According to the government, the National Steering Committee includes representation by government, the private sector, development partners, youth groups, parliament, Ntlo ya Dikgosi (formerly House of Chiefs), civil society organisations, trade unions and other non-state actors. The Technical Task Force and Thematic Working Groups also have multi-sectoral membership.
Baseline or gap analysis
According to the report, Botswana mapped the SDG indicators that are relevant to its national development plans. The government is planning to compile the baselines of those indicators for which data are readily available. The results of the mapping are not available in the report.

Integration and policy coherence
A limited set of SDGs are covered in the VNR report, including SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, and SDG 17 on partnerships for the goals (of the High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals, only SDG 14 on life below water was excluded). The report addresses the economic, social and environmental dimensions of sustainable development, but has a relatively greater focus on social aspects. While references to social and economic aspects were almost always made in the detailed examination of goals, references to environmental aspects were limited. The report does not mention policy coherence for sustainable development.

Leave no one behind
The report acknowledges the need for data disaggregated by gender, region and social status, which are not readily available. Most available data are not up to date. The government identifies women, people with disabilities, the poor, vulnerable individuals, the destitute and orphans as at risk of being left behind.

The report notes the government’s efforts to eliminate extreme poverty as an attempt to leave no one behind. Botswana has a range of social programmes specifically geared to the poorest and most marginalised, including the Integrated Support Programme for Arable Agricultural Development that provides crop farmers with subsidies to increase productivity in the agricultural sector. Such programmes have been majorly contributing to the reduction in extreme poverty seen in the country, according to the report.

Raising awareness, creating ownership
According to the report, the 2030 Agenda has been promoted through awareness campaigns and several dialogue sessions undertaken jointly by the government and United Nations agencies for local authorities, civil society, academia and parliament.

National priorities include development of diversified sources of economic growth, human capital development, social development, sustainable use of natural resources, and implementation of an effective monitoring and evaluation system as outlined in the 11th National Development Plan. With respect to localisation of the 2030 Agenda, the report notes that awareness campaigns were held at the district level focusing on awareness raising and identifying key challenges faced by individuals.

Stakeholder engagement
The report notes that consultations were held to develop Vision 2036 and sub-national plans that align with the SDGs. It also mentions that representatives of government, non-governmental organisations, the private sector, local authorities, development partners and academia participated in a workshop to provide inputs for the VNR report.

Implementing the 2030 Agenda
The report outlines several lessons for SDG implementation. The government harnessed the efforts of community and traditional leaders, opinion leaders, the media and political leaders to address certain social challenges faced by the country. The approach made community-led interventions more effective, particularly in the area of gender-based violence. Similarly, coordination of efforts on poverty issues was entrusted to the Office of the President to increase attention. Botswana’s experience also shows that growth is necessary but not sufficient to realise sustainable development outcomes. Notably, the government found that the involvement of women in all levels of consultation on the SDGs was key to their adoption at the local level.

In terms of challenges facing Botswana, the report notes that the country’s upper middle-income status makes accessing certain pools of international finance difficult. There is a need for the country to harness strategic partnerships, including those that involve its strong research infrastructure. Botswana also needs to address data gaps and establish a robust evaluation system. The government recognises the need to diversify development finance from traditional aid to more strategic partnership approaches, including South-South cooperation.

Partnership to realise the SDGs
The report highlights the role of non-governmental organisations in SDG awareness campaigns, noting their efforts to identify relevant SDG targets for inclusion in plans and budgets. Debswana (the biggest diamond producer in the country) and the Botswana Stock Exchange are also actively advocating the SDGs. The report notes the critical role of United Nations agencies in supporting SDG implementation and in the VNR process.
Measurement and reporting

Data availability is unclear from the report since a statistical annex includes some data but only for the goals examined in the report. There is a need for disaggregated data in terms of gender, region and social status. The report notes that significant resources will be needed to improve data availability. It does not mention national reporting mechanisms for SDG implementation.
Brazil - Yellow

In 2017, Brazil submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs

As a result of a mapping exercise carried out in the second half of 2016, the government reviewed the alignment between Sustainable Development Goal (SDG) targets and its Multi-Year Plan 2016-2019, the main instrument for medium-term planning of government actions, programmes, objectives and initiatives.

Nevertheless, the VNR report did not mention if the principles of the 2030 Agenda for Sustainable Development were taken into account. It did not make references to universality and human right, while the principle of leave no one behind is only mentioned in a quotation from the 2030 Agenda and when SDG 5 on gender equality is examined.

Leadership, governance and institutions

The government established a National Commission for the SDGs to be the main institutional mechanism for implementation of the 2030 Agenda. The commission plays an advisory role and is responsible for conducting an inclusive and consultative process with federated entities (all sub-national levels under the Federal Government), parliament, the private sector, trade unions, academia and civil society.

At the regional level, Brazil participates in the Statistical Coordination Group for the 2030 Agenda in Latin America and the Caribbean. At the same time, Brazil identifies itself as a BRICS country.

Civil society validity check

A civil society report underscores that creating committees will not be sufficient as long as there is lack of transparency, access to information and monitoring of fundamentally important areas as well as a shortage of effective government accountability mechanisms.

Baseline or gap analysis

The government did not carry out a baseline study or gap analysis. The report makes broad references to gaps while analysing SDG 1 on no poverty and SDG 3 on good health and well-being without giving further details. The report also makes some references to the existence of a data gap in the country without describing it.
Integration and policy coherence

The report only examines the SDGs covered by the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world,” namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. Linkages between the economic, social and environmental dimensions of sustainable development are not considered, even though the 2030 Agenda is acknowledged a strategy for economic, social and environmental development. The analysis undertaken is largely towards tax considerations.

The Paris Agreement on climate change is not mentioned in the report, though climate change is referred to as a threat. The Addis Ababa Action Agenda is also not mentioned. Policy coherence for sustainable development is not discussed, but the report highlights global issues that may hinder the achievement of the SDGs in the country.

Leave no one behind

The report does not address the principle of leave no one behind systematically. It mentions the disaggregation of data as a condition for prioritising the most vulnerable people on the road to sustainable development as well as the worrisome situation of vulnerable groups who face overlapping disadvantages, such as women suffering gender inequalities interrelated with regional, class and racial inequalities.

Raising awareness, creating ownership

In order to raise awareness about the SDGs, the government invited representatives of civil society, the private sector and local governments with experience in engagement and awareness raising to support the 2030 Agenda. In addition, its SDG localisation process involves proposals for engagement of the private sector, academia and civil society organisations, among others, in the dissemination of the 2030 Agenda. The creation of a SDG Brazil award is under consideration.

Stakeholder engagement

To contribute to the drafting of the VNR report, the government introduced an electronic form to collect information on initiatives developed by civil society. Several non-state actors with experience in engagement and awareness raising to support the 2030 Agenda were invited to submit information, which provided inputs for the development of section six of the report titled “Initiatives for the achievement of the SDGs.” Non-state actors are involved in the identification of national priorities through the National Commission for the SDGs and a set of social media and web-based platforms such as Participa.br and Dialoga Brasil.

Notably, a group of civil society organisations drafted a Spotlight Synthesis Report: The 2030 Sustainable Development Agenda in Brazil, which highlights the lack of effective government accountability mechanisms, most of the policy committees or councils in the country being in a state of crisis and those who stand up for rights are killed in the burgeoning wave of institutionalised violence.

Implementing the 2030 Agenda

The report includes references to technology, capacity development, trade, and national and international public and private finance as means of implementation. Some implementation challenges are noted, such as improving long-term planning, coordinating the dialogue among stakeholders, expanding investments in infrastructure, and enhancing management and governance instruments. The impact of systemic issues is also considered, including the economic slowdown and uneven recovery after the global financial crisis still affecting Brazil’s capabilities to advance the 2030 Agenda.

Partnership to realise the SDGs

According to the report, networks of stakeholders have been created to mobilise and engage the population in the SDG implementation and follow-up processes, broaden, democratise and enhance the debate on sustainable development in Brazil, and propose and mobilise effective means of implementation for the 2030 Agenda.

The creation of a nonpartisan Joint Parliamentary Front to Support the SDGs is highlighted. It brings together more than 200 parliamentarians to maintain and consolidate joint action in favour of the SDGs as well as foster the adoption of laws aimed to promote enabling environments for sustainable development.

Measurement and reporting

The government began the evaluation of the sufficiency of its databases to determine the availability of indicators to monitor the SDGs. A preliminary study, which was conducted in 2016 and took globally agreed indicators as a basis, identified the following national situation: 105 indicators in Tier I (Indicator is conceptually clear, has an internationally established methodology and standards are available, and data are regularly produced by the country); 39 indicators in Tier II (Indicator is conceptually clear, has an internationally established methodology and standards are available, but data are not regularly produced by the country); and 68 indicators in Tier III (No internationally established methodology or standards are yet available for the indicator).
In 2017, Chile submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

The VNR report affirms that the Government Program 2014-2018 is consistent with the 2030 Agenda for Sustainable Development, especially with the proposed reforms that seek to advance Chile in terms of inclusive growth and reducing inequalities and poverty in all its forms. Policies and programmes have been initiated and strengthened to advance the coverage and quality of the social protection system that was established in 2000.

The principles of human rights, universality and leave no one behind are considered in the VNR report. It states that Sustainable Development Goal (SDG) implementation requires paying special attention to specific segments of the population, such as indigenous peoples, children and adolescents, women in situations of vulnerability, people with disabilities and immigrants.

**Leadership, governance and institutions**

Chile created the National Council for the Implementation of the 2030 Agenda for Sustainable Development as the main institutional mechanism for the implementation of the 2030 Agenda, which is composed of the Ministry of Foreign Affairs; the Ministry of Economy, Development and Tourism; the Ministry of the Environment; and the Ministry of Social Development, the latter of which serves as a technical secretariat and receives technical support from the national statistical office. A government network for the SDGs that includes the 23 ministries has been also organised. Committees and working groups that bring together government institutions, the private sector, civil society and academia, with the support of the United Nations system, have been established.

The report affirms that Chile participates in regional activities aimed at advancing the 2030 Agenda, but does not mention any of them specifically.

**Baseline or gap analysis**

According to the report, Chile engaged in information-gathering activities for the initial establishment of national baselines for the SDGs in both 2016 and 2017, a process that has not yet been completed.
Integration and policy coherence
The report analyses the SDGs covered by the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world,” namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. Analysis includes references to policies linked to each goal.

From the point of view of the government, implementation of the 2030 Agenda is an opportunity to reinforce its commitment to achieving sustainable and inclusive development. The report considers the economic, social and environmental dimensions of sustainable development in a balanced way. Policy coherence for sustainable development is not discussed, though the analysis of SDG 17 on partnerships for the goals highlights global issues that may hinder the achievement of the SDGs at a national level. Mentions of climate change and the Paris Agreement on climate change are explicitly linked to the SDGs, but there is no mention of the Addis Ababa Action Agenda.

Leave no one behind
The report does not include an analysis of data availability to meet the commitment to leave no one behind. Certain vulnerable groups are targeted by policies, including indigenous peoples, children and youth, women in situations of vulnerability, people with disabilities and immigrants, among others. Efforts at the national level to reduce inequalities are highlighted.

Raising awareness, creating ownership
In order to raise awareness about the SDGs, various government institutions organised activities that involved representatives of the National Council for the Implementation of the 2030 Agenda for Sustainable Development or its technical secretariat. Civil society organisations, the private sector, academia and international organisations have also organised activities to raise awareness. Chile has not yet identified national SDG priorities.

Stakeholder engagement
The report was discussed in meetings with representatives of civil society organisations and received input from the private sector and academia. A civil society report was prepared in response to global civil society platform Action for Sustainable Development’s civil society questionnaire. Local governments are participating in the SDG implementation process by signing framework agreements with the national government.

Implementing the 2030 Agenda
The report refers to technology, capacity building, trade and international public financing as means of implementation and underlines the role of North-South, South-South and triangular cooperation. Seven key challenges are identified, such as strengthening information systems in order to collect data that allow monitoring of the SDGs, changing the logic and inertia within sectors to work out of silos and with multiple stakeholders on 2030 Agenda implementation, and installing the 2030 Agenda as a commitment that goes beyond a single period of government.

Partnership to realise the SDGs
Even though multiple stakeholders, such as the private sector and academia, are repeatedly mentioned in the report, only civil society has a clearly articulated role laid out. International cooperation is underlined as a key tool to implement the SDGs.

Measurement and reporting
Chile adopted a law on incorporating the United Nations’ fundamental principles of official statistics. A bill that will further institutionalise the national statistical system and improve it based on principles recognised by the United Nations and Organisation for Economic Co-operation and Development is currently being debated in parliament. Also, a series of innovations have been introduced in the National Socioeconomic Characterisation Survey, which is the main survey of households in the country, to improve the measurement of indicators related to the SDGs and their targets.
Costa Rica – Yellow

In 2017, Costa Rica submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs

The government carried out the first phase of alignment between its National Development Plan 2015-2018 and the 2030 Agenda for Sustainable Development, which included an analysis of the linkages of programmes related to the Sustainable Development Goals (SDGs). The analysis found that 94 programmes and projects under implementation in the country are linked to all 17 SDGs, all 169 targets and 181 of the 241 indicators.

The VNR report includes several references to the principles of universality, leaving no one behind and human rights. Regarding the latter, national development policies in Costa Rica, as defined, include both 2030 Agenda commitments and human rights bodies recommendations to the country.

Leadership, governance and institutions

The government created a High-Level Council of the SDGs to be the main institutional mechanism for implementation of the 2030 Agenda. The council is chaired by the president, minister of planning and economic policy, minister of environment and minister of foreign affairs.

Technical advice will be provided by a Technical Secretariat of the SDGs, led by the minister of planning and economic policy and supported by a Statistical Advisory Body, which is led by the national statistical office.

Civil society organisations, faith-based organisations, academia and the private sector contribute to SDG implementation at the national level. They signed a National Pact for the Advancement of the SDGs, in which the main government institutions also participate.

Baseline or gap analysis

An assessment of gaps is carried out in the report. Costa Rica has the necessary information to measure 80 indicators, 73 indicators are not nationally constructed but can be built based on nationally available data, and 33 indicators are not produced. Another 57 indicators are acknowledged as inadequate for the country. These findings are not properly explained in the report.
Integration and policy coherence
The report covers the SDGs selected by the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world.” The analysis of each goal includes references to existing government policies linked to its implementation and references to linkages between the economic, social and environmental dimensions of sustainable development. However, the report does not reference policy coherence for sustainable development, the Paris Agreement on climate change or the Addis Ababa Action Agenda.

Leave no one behind
In Costa Rica, the reduction of poverty is seen as a country-wide challenge that must be addressed in a multidimensional way. However, the leave no one behind principle is not addressed in a concerted manner and hardly considered in relation to data requirements, with the only practical reference being to targeted groups, such as women, the elderly, Afro-descendants, people with disabilities, LGBTIQ, and indigenous peoples.

Raising awareness, creating ownership
In order to raise awareness of the SDGs, the government invited several representatives of civil society, the private sector and local governments to support the 2030 Agenda. As a result, non-state actors have participated in the process of establishing national SDG priorities and the three main issues have been highlighted as areas that must be prioritised in Costa Rica’s path to sustainable development: the fight against poverty, sustainable production and consumption, and infrastructure and sustainable communities. The first and third issues are major challenges for the country. Localisation of the SDGs at the national level is not mentioned in the VNR report.

Stakeholder engagement
Non-state actors engaged in the identification of national priorities by participating in processes led by the national government aimed to define areas of joint action to promote the 2030 Agenda, Human Rights, inclusive growth and environmental protection.

On September 9, 2016, Costa Rica became the first country in the world to sign a National Pact for the Advancement of the SDGs. Parties to the agreement are the executive, legislative and judicial branches of government, the Supreme Electoral Tribunal, civil society, faith-based organisations, public universities, local governments and the private sector.
In 2017, Curaçao submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development as part of the submission by the Kingdom of the Netherlands, of which it is a constituent country.

**Incorporating the SDGs**
According to the VNR report, Curaçao integrated high-priority Sustainable Development Goals (SDGs) into its National Development Plan. The plan focuses on education, the economy, sustainability, national identity, and good governance and leadership. It includes various aspects of nation building and capacity development. Curaçao prioritises four SDGs that provide measurable targets responding to local challenges: SDG 4 on quality education, SDG 7 on affordable and clean energy, SDG 8 on decent work and economic growth and SDG 14 on life below water.

**Leadership, governance and institutions**
The report does not outline governance and institutional structures for SDG implementation. It does, however, highlight participation in regional and special country groups – small island developing states – and discuss challenges and opportunities in SDG implementation.

**Baseline or gap analysis**
The country is preparing to have its statistics bureau draw up a baseline measurement of SDG status. This work will highlight areas where implementation is lagging behind, clarify where political decisions need to be made and help gradually enhance data for SDG indicators.

**Integration and policy coherence**
The report covers SDG 1 on no poverty, SDG 2 on zero hunger, SDG 4 on quality education, SDG 5 on gender equality, SDG 6 on clean water and sanitation, SDG 7 on affordable and clean energy, SDG 9 on industry, innovation and infrastructure, SDG 11 on sustainable cities and communities, SDG 13 on climate action, SDG 14 on life below water, SDG 15 on life on land, SDG 16 on peace, justice and strong institutions and SDG 17 on partnerships for the goals. While the report gives equal attention to the economic, social and environmental dimensions of sustainable development, information
is presented at the summary level with limited references to linkages between dimensions in the goal-by-goal analysis. Some references are made to Curaçao’s global contributions to the SDGs, though with limited details.

Leave no one behind
In Curaçao, efforts to leave no one behind are central to the government’s efforts to build an inclusive, sustainable economy and reduce poverty across the entire population. However, the report neither outlines the status of data to meet the commitment to leave no one behind nor refers to who is at risk of being left behind.

Raising awareness, creating ownership
The government has used the momentum created by the VNR process to encourage ministries and key stakeholders to raise awareness of the SDGs and 2030 Agenda for Sustainable Development as a whole. Since 2014, Curaçao’s national dialogue on the theme “Kòrsou ta Avansá” (“Curaçao is Advancing”) has provided a platform for the government, businesses and trade unions to discuss policy paths. The dialogue’s success adds value in promoting stakeholder awareness of the SDGs and 2030 Agenda as a whole as well as involvement in implementation. The report does not outline efforts to localise the SDGs.

Stakeholder engagement
According to the report, civil society, the statistics bureau, young people and the private sector contributed to the first national SDG review. The national dialogue played a key role in drafting and launching Curaçao’s National Development Plan.

Implementing the 2030 Agenda
The government is using the SDGs, and particularly the SDG indicators, to enhance cooperation between ministries in drawing up multi-year budgets for policy programmes on youth, safety and economic growth. The Ministry of General Affairs, Ministry of Finance and Ministry of Governance, Planning and Public Service started working towards programme-based financing for the government’s multi-annual budgets. While coordinated national efforts on implementation still need to be developed, Curaçao is already taking action on various SDGs.

According to the report, ensuring broad involvement and collaboration between different sectors is an ongoing challenge and SDG implementation must be further aligned with existing policies. There is also a need to further increase public awareness.

There is no Curaçao-specific information for most sections on means of implementation in the report. However, to the extent that Curaçao contributes to the Kingdom of the Netherlands’ international development efforts, the combination of foreign trade and development cooperation is highlighted as a positive contribution.

Partnership to realise the SDGs
In addition to the activities noted above, the report points to the role of youth representatives actively involved in SDG implementation. In 2017, Curaçao established a democratically elected National Youth Council to engage young people in policy making and shaping their future. More than 300 young people participated in national youth dialogues aimed at ensuring broad support for the National Action Programme for Youth Development, which is linked to the SDGs. The programme focuses on five priority areas, including creating jobs, promoting national identity and encouraging young people to remain in school. The council has linked its policies to the SDGs.

Curaçao signed the United Nations Multi-Country Sustainable Development Framework for the Caribbean. The framework guarantees national ownership while promoting regional synergies in implementing the SDGs. It primarily focuses on priority areas for the Caribbean. It gives countries a platform to access the United Nations system’s global expertise and experience at both the national and regional levels.

Measurement and reporting
Curaçao faces challenges in gathering usable, timely data to track SDG implementation. Data collection priorities are thus included in the National Development Plan. Together with the United Nations Development Programme, the statistics bureau is launching a National Socioeconomic Database to monitor SDG indicators that are relevant to Curaçao, make data more readily available and enhance uniformity by taking the SDG indicators as a guide for data collection. The initial focus of data collection will be indicators related to the four SDGs prioritised by Curaçao, with indicators for other SDGs incorporated later. More technical support is required and financing this process remains a challenge.

The report makes reference to annual reporting but is not specific about how.
Cyprus – Green

In 2017, Cyprus submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
Cyprus has not prepared a long-term sustainable development strategy due to the government’s focus on short- and medium-term measures for tackling the country’s economic crisis. A combination of national and European Union policies and legislation cover most Sustainable Development Goals (SDGs) and serve as the basis for progress on them. The report refers to the universal nature of the 2030 Agenda for Sustainable Development and the need to leave no one behind.

Leadership, governance and institutions
Cyprus is making use of ministries and other government institutions, such as the national statistical office, to implement the SDGs under the coordination of the Ministry of Foreign Affairs. An inter-ministerial group was established and comprises contact points mostly from the strategic planning units of each ministry. Civil society organisations have called for the creation of a Government Authority for Sustainable Development. While individual ministries engage with them, non-state actors are not formally included in governance arrangements.

Baseline or gap analysis
There has been no baseline or gap analysis according to the report. The government notes that more consultations need to be undertaken to refine the set of indicators and define appropriate baselines and targets for each one.

Integration and policy coherence
The report covers all of the SDGs with the exception of SDG 10 on reduced inequalities. A statistical annex includes preliminary data while the goal-by-goal analysis highlights overall trends and efforts to improve sustainable development outcomes. The report covers the economic, social and environmental dimensions of sustainable development, but has a relatively greater focus on economic aspects and makes limited references to the linkages between dimensions. Policy coherence for development is not mentioned.

Leave no one behind
The report does not provide information on data to meet the commitment to leave no one behind or identify who is at risk of being left behind. There is no information on efforts to leave no one behind or reduce domestic inequalities.
Raising awareness, creating ownership

The report notes that there were extensive efforts to promote sustainable development to the population in 2015. The government then worked with civil society to carry out numerous projects promoting all or specific SDGs. The government is planning an extensive public information campaign.

Priorities were set based on the government’s priorities as well as horizontal focal areas, such as youth. Coordination through government institutions led to the selection of five priority SDGs, with youth being a cross-cutting priority: SDG 1 on no poverty, SDG 4 on quality education, SDG 7 on affordable and clean energy, SDG 9 on industry, innovation and infrastructure and SDG 14 on life below water.

The report’s statistical annex includes a selection of indicators for each of the 17 SDGs. The national statistical office selected the indicators, largely drawing on the European Union’s set of SDG indicators.

Stakeholder engagement

The government circulated an online survey on the SDGs and SDG priorities, which was ongoing at the time of the VNR process. According to the government, communication and coordination with civil society was done at various levels and for various government sectors. A presentation was also made on the SDGs and Cyprus’s progress to the parliament’s Environment Committee upon a request by the president.

A separate study was conducted by the non-governmental organisation Center for the Advancement of Research & Development in Educational Technology on the participation of Cyprus’s civil society in SDG implementation. The results are summarised in the VNR report, with the full report included in an annex.

Implementing the 2030 Agenda

The report outlines best practice in terms of policies in Cyprus such as the provision of free and easily accessible education to everyone at all education levels, supplying excellent quality drinking water to consumers, efforts to combat human trafficking, and promotion of international cooperation on issues such as the protection of cultural property and marine pollution.

Cyprus is prepared to share its expertise and play a leading role in the Mediterranean region for the establishment of synergies and partnerships that help refugees and migrants adjust to new cultures and environments as well as to make good use of their qualifications.

Civil society validity check

A civil society report notes that government institutions and civil society organisations need to deepen their collaboration and mutual support. While civil society organisations’ relationships with certain institutions can be long-lasting and seamless, they depend on the specific projects, initiatives and obligations that emerge periodically for both parties. There is a need for dedicated liaisons within institutions. The government has undertaken some efforts to address this issue.

The greatest challenge in SDG implementation is the absence of a specific, horizontal coordination body to coordinate the domestic implementation of the 2030 Agenda for Sustainable Development with all relevant stakeholders and engage the population. Another challenge is the absence of a longer-term sustainable development strategy that includes the three dimensions of sustainable development. Cyprus is going through institutional restructuring that has hindered its ability to develop a coordination mechanism for strategy. The country’s economic crisis has caused a considerable setback to its path towards sustainable development due to the government’s attention to crisis management and shorter-term planning.

Partnership to realise the SDGs

The report highlights engagement with civil society on SDG awareness raising and the private sector on corporate social responsibility.

Measurement and reporting

The report makes use of the European Union’s set of SDG indicators, noting that this approach has the advantage of using data that are readily available with no significant new data collection needed. It is unclear how many of the global SDG indicators are available for Cyprus. A preliminary set of SDG indicators has yet to be discussed and agreed with the various stakeholders involved in the formulation, implementation and monitoring of national SDG policies. The report does not outline national reporting on SDG implementation.
In 2017, the Czech Republic submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
Following a multi-stakeholder consultation that began in 2015, the Czech Republic adopted a national strategic framework for sustainable development titled Czech Republic 2030 in April 2017. The framework serves as an overarching framework for sectoral, regional and local strategies. The country is in the process of developing an implementation strategy to support the framework.

**Leadership, governance and institutions**
The prime minister is the chair of the Government Council for Sustainable Development. The council includes representation by non-state actors and has nine thematic committees that address the social, economic and environmental dimensions of sustainable development. It is supported by a secretariat based in the Sustainable Development Department at the Office of the Government of the Czech Republic. The institutional location of the secretariat allows the horizontal integration, cross-sectoral coordination and mainstreaming of the three dimensions of sustainable development in national policy making.

**Baseline or gap analysis**
The Czech Republic carried out a baseline assessment for all Sustainable Development Goals (SDGs) based above- or below-Organisation for Economic Co-operation and Development country average scoring. The assessment led to the identification of priority areas where more progress is needed to realise the SDGs, including gender equality, quality of earnings, improving energy efficiency and meeting official development assistance commitments.

**Integration and policy coherence**
The report covers the three dimensions of sustainable development through a summary examination of SDGs and their associated targets and indicators, but does not provide details for each SDG. The Czech Republic recognises the importance of policy coherence for sustainable development, though the report does not include an assessment of the impacts of domestic or external policies.
on SDG outcomes. Nevertheless, the report notes that the Czech Republic aims to strengthen its institutional, analytical and control mechanisms to ensure policy coherence for sustainable development in order to reduce the adverse impacts that the country’s policies have beyond its borders.

Leave no one behind
The report does not offer data on the current status of vulnerable and marginalised groups in the country or outline targeted efforts to leave no one behind and reduce domestic inequalities. Rather, the report states that in order to achieve all of the SDGs by 2030, the social system should increase its outreach to the most vulnerable groups following the principle of leaving no one behind.

Raising awareness, creating ownership
According to the report, over 300 entities provided their expertise and feedback in the preparations for Czech Republic 2030. The framework sets out 97 specific goals in six key areas for the country: people and society, prosperity, resilient ecosystems, regions and municipalities, global development, and good governance. The inclusion of regions and municipalities as priorities in the framework indicates the importance of localising the SDGs for the country. The government plans to provide methodological and coordination support for SDG implementation at the sub-national level. Notably, a contest called The Czech SDG Awards was organised in 2017 to raise awareness about the SDGs and award national projects that contribute to their implementation.

Stakeholder engagement
For the country, the development of Czech Republic 2030 represented an unprecedented level of stakeholder involvement. The framework was drafted through close cooperation with ministries, local and regional authorities, parliamentary representatives and a wide range of other stakeholders, including civil society, the private sector, academia and labour unions.

Implementing the 2030 Agenda
The report did not highlight best practice, lessons learned and challenges in implementation or make reference to financing the SDGs.

Partnership to realise the SDGs
The report mentions the role of non-state actors in SDG implementation. In addition to its own efforts, including The Czech SDG Awards, the government expects Czech Republic 2030 to be supported by voluntary commitments. This approach allows civil society, the private sector and other stakeholders including individuals to participate in the implementation process and encourages partnerships between various segments of society.

Measurement and reporting
The Czech Republic has data available to cover 95 of the 169 SDG targets. The report does not provide an indication of the availability of disaggregated data or indicate how data availability will be improved.

The government plans to report biannually on Czech Republic 2030 through an analytical report titled Report on Quality of Life and its Sustainability, which will assess the compliance of sectoral and regional strategic documents, programmes and measures and progress towards national objectives. It will maintain a national Database of Strategies, an online platform that links the goals and targets of various strategies with data sources for indicators. It also welcomes the elaboration of a shadow report by stakeholders not represented in the Government Council for Sustainable Development.
In 2017, Denmark submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government introduced a national action plan on how to follow up on the Sustainable Development Goals (SDGs) and already integrates sustainable development into policy making. The 2030 Agenda for Sustainable Development and SDGs constitute the platform for the country’s development cooperation and humanitarian action as reflected in the government’s new strategy titled The World 2030. Denmark recognises the universal, human rights-based nature of the 2030 Agenda and the need to ensure that no one is left behind.

**Leadership, governance and institutions**
The Ministry of Finance is responsible for coordination of national implementation and the national action plan adopted by the government. Ministries are responsible for integrating the SDGs into their policies. The Ministry of Foreign Affairs is responsible for the SDGs in the context of the United Nations and other international forums as well as in foreign and security policy, trade policy and development policy. Efforts are mainly coordinated through the inter-ministerial SDG working group and bilaterally between the Ministry of Finance and other ministries. Non-state actors are not formally involved, but participate in a parliamentary network on the SDGs.

**Baseline or gap analysis**
An initial SDG data-mapping exercise was conducted in 2016. The government plans to finalise the SDG data-mapping exercise as a next step. In parallel, the national statistical office will analyse the data currently available and evaluate which data are best suited for follow-up, a process in which more data and new data sources will be examined. Based on estimates from the national statistical office, data for roughly 51–60% of the SDG indicators are available.

**Integration and policy coherence**
All of the SDGs are covered in a statistical annex but not the main text of the report. Rather, a summary of progress against the themes of people, planet, prosperity, peace and partnership is provided, which gives equal attention to the economic, social and environmental dimensions of sustainable development. However, the report makes limited references to linkages between dimensions in the thematic analysis.
With respect to integration and policy coherence for sustainable development, the report notes that Denmark already assesses the economic, environmental and gender equality consequences of new legislation. As such, several of the SDGs are already covered by existing procedures. The government supports policy coherence in national and international sustainable development efforts and ministries integrate sustainable development into policy making. As part of the national action plan, the government will assess the consequences of new legislation and major initiatives for the SDGs when considered relevant for Denmark and the impacts are significant. The development of an assessment framework to this end is ongoing.

Leave no one behind
Although Denmark recognises the importance of the principle of leaving no one behind, the report does not provide details on data, who is at risk or efforts to leave no one behind and address domestic inequalities.

Raising awareness, creating ownership
The report notes that there is a need for the government to raise awareness among the population. Non-state actors, however, have been active. The World’s Best News is a multi-stakeholder initiative originally initiated by the Danish civil society organisations to communicate the SDGs to the population.

Denmark’s action plan is centred on the themes of people, planet, prosperity, peace and partnerships. The government formulated 37 targets that in most cases integrate and cut across several SDGs. They reflect the government’s ambition to prioritise. Each target has one or two national indicators, which are generally measurable and quantifiable.

The government, municipalities and regions agreed to cooperate to achieve the SDGs and integrate sustainable development into policy making.

Stakeholder engagement
The report refers to engagement by various ministries in the development of the action plan but does not mention non-state actors. A civil society report notes that civil society organisations made recommendations for the action plan, but makes no reference to consultation.

For the VNR process, stakeholders from civil society, the private sector, local governments, youth and academia highlighted their contributions to achieving the SDGs nationally and internationally. The Ministry of Finance held an initial meeting with relevant stakeholders prior to the drafting of main messages and another meeting was held shortly before the submission of the VNR report.

Implementing the 2030 Agenda
Denmark attributes its success on sustainable development to responsible economic policies, personal freedom, gender equality, education for all, anti-corruption, a social safety net, protection of the environment and climate, an open democracy, transparent and accountable institutions, and respect for human rights.

BEST PRACTICE SPOTLIGHT
Denmark’s government invited members of parliament and other stakeholders to participate in the Danish delegation at the High-level Political Forum and accommodated requests from other stakeholders as well.

Implementation of the action plan and sustainable development in general is funded by budget allocations approved by parliament during annual budget negotiations for the coming fiscal year. Denmark provides 0.7% of gross national income in official development assistance and will continue to do so according to the government. Denmark is also preparing to launch a SDG Fund that will combine public and private funds to mobilise further private capital. The government promises to promote the interests of the least developed countries in trade.

Partnership to realise the SDGs
The report highlights specific examples of partnerships and includes an annex with details on the contributions from various non-state actors. For example, civil society is upscaling partnership-driven implementation efforts and strengthening accountability measures in Denmark. Several larger companies are actively working to integrate the SDGs in their business models, strategies and investments.

Measurement and monitoring
Overall, Denmark has data for 51–60% of global indicators. Disaggregated data are generally available. The government plans to publish annual progress reports on its 37 targets, which will be sent to parliament. Every fourth year, the progress report will be replaced by a more comprehensive status report that also contains initiatives for achieving the SDGs and possible adjustments to the action plan. Denmark committed to conduct two more VNR reports before 2030.
In 2017, El Salvador submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government aligned the Sustainable Development Goals (SDGs) with its National Plan for Development, Protection and Social Inclusion 2014-2019 and national sector plans as the main means of SDG implementation.

El Salvador is one of 15 countries that participate in the Mainstreaming, Acceleration and Policy Support programme for accelerated implementation of the 2030 Agenda for Sustainable Development. It also participates with six other countries in a pilot initiative to monitor SDG 16 on peace, justice and strong institutions at the national level.

The VNR report does not consider the principles of human rights, universality or leave no one behind in a systematic way.

**Leadership, governance and institutions**
According to the report, national implementation is carried out by government political and technical bodies in a coordinated manner. However, the government recognises the need for a broad and long-term governance framework for the 2030 Agenda and the report mentions that the creation of a National Council for Sustainable Development is planned.

**Baseline or gap analysis**
A baseline study was carried out, but the only finding noted in the VNR report is the identification of feasible indicators based on the availability of national information. The key elements considered in the study are not specified in the report.

**Integration and policy coherence**
The VNR report examines the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” SDGs plus SDG 16 on peace, justice and strong institutions. The analysis provides limited details on each goal and its targets and indicators. However, multiple references to applicable linkages between the economic, social and environmental dimensions of sustainable development are made. The report considers poverty eradication as a cross-cutting variable for analysis and notes the
country's disagreement with the logic of international cooperation that allocates resources based on gross domestic product.

Policy coherence is considered but not analysed in the report, even though the Paris Agreement on climate change and Addis Ababa Action Agenda are mentioned.

**Leave no one behind**

The report does not identify efforts to leave no one behind, but considers groups identified as at risk of being left behind, such as women, youth and migrant workers, in defining national targets.

The issue of the existence of national inequalities receives special attention, with the adoption of the National Plan for Development, Protection and Social Inclusion 2014-2019 before the 2030 Agenda being noted.

**Raising awareness, creating ownership**

El Salvador prioritises nine SDGs with their 88 targets, and 29 SDG targets from eight goals that are not deemed priorities. The SDGs identified as national priorities are SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 5 on gender equality, SDG 6 on clean water and sanitation, SDG 13 on climate action, SDG 16 on peace, justice and strong institutions and SDG 17 on partnerships for the goals.

According to the report, the localisation of SDG implementation at the sub-national level is imperative because local policies and actions will be required to achieve the SDGs.

**Stakeholder engagement**

Non-state actors were engaged in the identification of national priorities and consulted as part of the preparation of the VNR report. The report mentions that the involvement of non-state actors, such as civil society, academia and the private sector, cannot be done by decree, but requires investment in long-term alliances and dialogue on specific issues.

**Implementing the 2030 Agenda**

The report analyses technology, capacity development and international public finance as means of implementation to advance the SDGs in the country.

Regarding financing, international public finance, climate finance and national and international private funding are taken into account.

The report presents a broad set of lessons learned on issues such as ownership and institutionalisation, political commitment, financing strategies, multi-stakeholder engagement, and data and statistics.

It also notes some challenges for SDG implementation at the national level: developing a long-term strategy oriented to fulfil the SDGs and articulating it through a network of institutions and sectoral public policies, promoting specific capacities to follow up the 2030 Agenda, achieving effective governance of the implementation process and its sustainability over time, and mobilising domestic and international resources to fund the implementation of the 2030 Agenda in El Salvador.

**Partnership to realise the SDGs**

Regarding partnership to realise the SDGs, the report repeatedly refers to the importance of the engagement of civil society, academia and the private sector in SDG implementation. Access to climate finance and technology is identified as a priority for development partner support. The VNR also includes many references to different activities through which civil society, academia and the private sector have worked to support implementation processes.

Nevertheless, the VNR lacks specific tasks and ways in which each stakeholder can participate in the SDG implementation process in the future and includes no mentions of expected roles to be played by them.

South-South and triangular cooperation are presented as regional and inter-regional tools to facilitate and support SDG implementation at the national level.

**Measurement and reporting**

Although it clearly identifies a series of problems that El Salvador faces in producing timely and disaggregated data, the report does not suggest measures to overcome them. Rather, it establishes overall objectives to be achieved, such as strengthening capacity to generate statistical information through the institutionalisation of a National Statistical Information System, improving levels of data disaggregation, promoting inter-institutional coordination in the field of statistics and improving the quality of administrative records. National reporting on SDG implementation is not outlined in the report.
Ethiopia – Green

In 2017, Ethiopia submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
Ethiopia integrated the Sustainable Development Goals (SDGs) into its national development plan, the second Growth and Transformation Plan (2015-2020). Ratified by parliament, the plan provides legal backing for SDG implementation. The VNR report lists sector-specific initiatives that address certain SDGs. Although the SDGs have been incorporated into the national development plan, the report notes that SDG-related policies in many areas had already been drafted with implementation underway. To what extent the SDGs are impacting or will impact existing policies and programmes is unclear.

Leadership, governance and institutions
Political responsibility for SDG implementation is not spelled out in the report. However, the report notes that the National Planning Commission reports on SDG implementation to the prime minister. Ethiopia has no governing council or committee for SDG implementation. Rather, responsibility for implementation is integrated across government at all administrative levels. Each government institution is responsible for consulting with non-state actors through Ethiopia’s Public Wings system, which provides an organised way for non-state actors to engage the government.

Baseline or gap analysis
The report includes a baseline assessment for the SDGs captured under the 2017 HLPF theme “Eradicating poverty and promoting prosperity in a changing world.” It also notes that baseline data are available for SDG indicators that follow on from the Millennium Development Goals. Areas where additional efforts are needed to realise the SDGs include child health, gender equality and ensuring food security in light of climate change impacts.

Integration and policy coherence
The report examines a limited set of SDGs (most of which are covered under the High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world”), namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 5 on gender equality, SDG 6 on clean water and sanitation, SDG 7 on affordable
and clean energy, SDG 9 on industry, innovation and infrastructure, and SDG 14 on life below water. Although it covers the economic, social and environmental dimensions of sustainable development, the report tends to have a relatively stronger focus on social aspects. In the examination of individual goals, the report makes references to applicable linkages between the three dimensions.

Policy coherence for sustainable development is not mentioned in the report. The impact of global systemic issues and trends on the realisation of the SDGs in Ethiopia is noted, including slowdown of the global economy and limited appetite of international partners to finance the SDGs. Notably, the impacts of climate change are strongly featured in the report, particularly in terms of hindering progress.

Leave no one behind

The report includes a detailed discussion of how Ethiopia plans to leave no one behind with the SDGs. Children, youth, women, the disabled, the elderly and those who have low levels of livelihood are identified as requiring additional support. The report outlines a range of initiatives to target specific groups. It notes the importance of the use of decentralised governance as a means to reach the poorest and most marginalised as well as affirmative action programmes and pro-poor policies, including a productive safety net in rural and urban areas. Domestic inequality is not addressed.

Raising awareness, creating ownership

Working with the United Nations Country Team in Ethiopia, the government undertook efforts to engage stakeholders on the national development plan at the national and regional levels and plans to continue raising awareness of the SDGs working with the United Nations. National priorities are identified in the national development plan, which focuses largely on the country’s economy, with SDG targets included therein. Whether national SDG targets and indicators have also been established is unclear. At the local level, regional governments and city administrations are expected to contribute to implementation of the national development plan and thus the SDGs.

Stakeholder engagement

Civil society, private sector and academic stakeholders were engaged in national consultations on the SDGs. The national consultations conducted at regional levels were complemented by group discussions on four topics: leaving no one behind, eradicating poverty and promoting prosperity in a changing world, achieving gender equality and empowering all women and girls, and strengthening the means of implementation for SDGs in Ethiopia.

Implementing the 2030 Agenda

The report highlights lessons from Ethiopia’s efforts to eradicate poverty, including the importance of government policies centred predominantly on poverty, decentralised governance that allows for participation and addressing local issues, high levels of government commitment, and public mobilisation for development. Key challenges include the impacts of climate change, slowdown of the global economy, low commitment by the international community to mobilise finance for the SDGs, the global unpredictability of peace and security (which impacts financial and aid flows), rent-seeking behaviour and lack of good governance at the country level, and capacity gaps.

Partnership to realise the SDGs

The report notes the role of civil society, the private sector, professional associations and academia in providing feedback on priorities and performance in the implementation of the national development plan. It does not outline how these stakeholders will engage in the implementation of the SDGs beyond consultations. Ethiopia expects development partners to engage in the preparation of plans and performance monitoring. The provision of feedback on performance evaluation and identification of priority and focal issues to be addressed in subsequent stages of SDG implementation are also expected.

Measurement and reporting

The report does not provide an overview of data availability for SDG monitoring, including disaggregated data, though notes that data on water ecosystems are limited. Ethiopia recognises that there is a need to improve data collection by tackling resource and capacity gaps. Parliament and the executive branch of government will monitor and support performance on the SDGs and the national development plan. Monitoring reports will be submitted to parliament every year.
Guatemala – Yellow

In 2017, Guatemala submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

The government incorporated the Sustainable Development Goals (SDGs) into its K’atun National Development Plan: Our Guatemala 2032, which was approved in 2014. The results of that adaptation process are reflected in the Strategy of alignment of the 2030 Agenda for Sustainable Development with the National Plan and Policy of Development K’atun Our Guatemala 2032, which was adopted in June 2016. The VNR report repeatedly refers to the principle of leaving no one behind. Nevertheless, it makes very few mentions of the universal nature of the 2030 Agenda and considers human rights in a siloed way.

**Leadership, governance and institutions**

The SDG implementation and follow-up process is led by the National Council for Urban and Rural Development, which was created in 2002 as the main body for dialogue with, promotion of and participation of civil society. The council is the highest authority in the Development Council System and composed of 14 representatives of civil society and all government cabinet members. The president chairs the council’s meetings.

Guatemala’s regional activities towards 2030 Agenda implementation are not considered in the VNR.

**Baseline or gap analysis**

According to the report, the national statistical office designed a management strategy for the generation of statistics, which is currently being implemented. It presents baselines for each SDG analysed.

The report also identifies a series of problems for statistical management in Guatemala, which are highlighted as obstacles for SDG follow-up: statistics dispersion among institutions, gaps in the application of standards and methodologies, lack of quality available data, lags in updating information, deficiency in timely attention to information requests, and inadequate disaggregation of information.

**Integration and policy coherence**

The report briefly analyses a limited set of the SDGs, namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good
health and well-being, SDG 5 on gender equality and SDG 9 on industry, innovation and infrastructure. Limited references are made to linkages between the economic, social and environmental dimensions of sustainable development in the analysis of goals, targets and indicators. The report does not make references to the Paris Agreement on climate change, the Addis Ababa Action Agenda or policy coherence for sustainable development.

Leaving no one behind

The report mentions that disaggregation of information is inadequate, since only about 55% of the 38 indicators that are produced can be disaggregated, with some limitations. Guatemala’s capacity to meet the commitment to leave no one behind is affected. Those at risk of being left behind are noted in the analysis of certain SDGs. For example, the analysis of SDG 3 on good health and well-being notes the vulnerability of LGBTI groups, people infected with HIV, sex workers, the elderly, migrants and disabled women. The reduction of domestic inequalities is not articulated in the report.

Raising awareness, creating ownership

As part of the efforts to define national priorities, multi-stakeholder meetings were organised to disseminate and raise awareness of the 2030 Agenda. Guatemala prioritised the 17 SDGs, 129 of their 169 targets, and 200 of their 241 indicators. Adaptation to the national context was not carried out. The VNR report discusses prioritised targets and indicators in the analysis of each selected SDG, making it impossible to identify prioritised targets related to SDGs not included in the report. Localisation of the SDGs at the national level is not analysed in the VNR.

Stakeholder engagement

The multi-stakeholder meetings that led to defining national priorities were carried out by the national statistical office, the Secretariat of Planning and Programming of the Presidency, United Nations agencies and funds, and the Agriculture, Natural Resources and Environment Institute of Rafael Landívar University. Its findings were discussed in multi-stakeholder validation workshops in November 2016. Non-state actors were not engaged in the preparation of the VNR report.

Implementing the 2030 Agenda

The report identifies a set of lessons learned from failures in Millennium Development Goal implementation efforts, such as the lack of national adaptation, insufficient information availability, shortage of financial foresight, absence of a long-term vision of the country’s development priorities, absence of a coordination and monitoring mechanism, and deficit of government and non-state actors’ awareness of the Millennium Development Goals.

In addition, challenges for SDG implementation are identified: creating institutional and political arrangements aimed at implementing the 2030 Agenda, incorporating development priorities in planning methods, considering the risks and vulnerabilities arising from the climate change threat, strengthening public finance for development financing, improving transparency and efficiency of public expenditure, promoting inter-sectoral and inter-institutional coordination and the participation of all Guatemalan stakeholders in the process of implementing the 2030 Agenda, and organising a methodical SDGs follow-up. Technology, capacity development, trade and international public financing are not addressed as means of implementation systematically.

Partnership to realise the SDGs

The participation of local non-state actors in SDG implementation is mentioned in the report. For example, the report states that promotion of inter-sectoral and inter-institutional coordination and the participation of all Guatemalan stakeholders in the process of implementing the 2030 Agenda is necessary. Civil society, academia and the private sector are considered by the report, but other stakeholders are not mentioned.

Measurement and monitoring

For Guatemala, data are available for 38 of the 241 SDG indicators (16%). The report points out that only 21 of those 38 indicators (55%) can be disaggregated. To improve data availability, Guatemala participated in the United Nations Economic Commission for Latin America and the Caribbean’s National statistical capacity questionnaire for the production of the SDG indicators from the global monitoring framework and in the United Nations Inter-agency and Expert Group on SDG Indicators, both defined in the report as bodies that work on the definition and improvement of the 2030 Agenda’s indicator framework and strengthening national statistical capacities. The report does not refer to national reporting on SDG implementation.
In 2017, Honduras submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government adopted two documents that establish its long-term development strategy: the Country Vision 2010-2038 and National Plan 2010-2022. Both were approved before the 2030 Agenda for Sustainable Development was adopted. The government also produced a mid-term strategy, the Development Assistance Programme for Honduras 2017-2021. Together these documents make up what is known as the Honduras Framework for Sustainable Development, which is aligned with the Sustainable Development Goals (SDGs). Nevertheless, the VNR report makes very few mentions of the main principles that give shape to the 2030 Agenda’s ambitions: human rights, universality and leave no one behind.

**Leadership, governance and institutions**
A high-level commission leads the political process of implementing the SDGs. In its work, the commission is supported by a technical committee, which provides technical advice and implements the commission’s decisions. The Presidency of the Republic of Honduras stated that the Secretariat of General Coordination of Government is responsible for leading the implementation of the 2030 Agenda and coordinating the work of the high-level commission and technical committee.

At the same time, non-state actors, including academia, civil society organisations, the private sector, workers’ and peasants’ organisations, and minorities, were invited to share their perspectives on SDG implementation during socialisation workshops organised by the government. To improve human resource capacities, Honduras has actively participated in 15 different events at the global and regional levels and thus trained 31 national assistants.

**Baseline or gap analysis**
The report does not make references to baseline or gap analysis.

**Integration and policy coherence**
The report does not analyse specific SDGs. While analyses national public policies, references to SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality
education, SDG 6 on clean water and sanitation, and SDG 17 on partnerships for the goals are included.

The report does not mention the Paris Agreement on climate change or Addis Ababa Action Agenda. Climate change receives little attention and there is no assessment of policy coherence for sustainable development. Nevertheless, the report considers the economic, social and environmental dimensions of sustainable development in a balanced way.

**Leave no one behind**

The leave no one behind principle is addressed in the report, though not systematically. The report mentions the principle in the executive synthesis and the chapters on multi-stakeholder participation in the implementation of 2030 Agenda at the national level and the national governance framework for the SDGs. Raising awareness, creating ownership.

The report introduces priorities set in the relations between Honduras and various development partners and points out the need to move forward with the definition of national priorities in the context of the 2030 Agenda, but without providing details. It also indicates that 102 local governments made first steps towards the elaboration of community and municipal development plans, which will be relevant in the localisation of the national SDG agenda.

**Stakeholder engagement**

There is no clear evidence that non-state actors were included in the VNR process or in defining priorities for development, a process that appears to be incomplete.

**Implementing the 2030 Agenda**

The report does not reference funding for the 2030 Agenda. Technology, capacity development, trade and international public finance are not mentioned as means of implementation. Some lessons learned are noted, such as inadequacy of measuring poverty in a unidimensional manner and usefulness of working together with various domestic stakeholders and development partners. Challenges to national implementation are also highlighted: coordination, planning and budgeting processes; strengthening local institutional capabilities; building adequate databases; promoting stakeholder participation and ownership; using mechanisms and instruments previously approved by the country as SDG implementation tools; elaborating and submitting country reports linked to the SDGs.

**Partnership to realise the SDGs**

The high-Level commission for SDG implementation includes representatives of the national and local governments, civil society organisations, the private sector, unions and academia.

The report notes that the process of stakeholder involvement advances slowly due to obstacles to bringing some non-state actors on board, especially the private sector. Still, significant progress was made in a dialogue with academia.

The report underlines the relevance of international development cooperation as a tool for the implementation of the 2030 Agenda and highlights priority areas for partnerships: the fight against extreme poverty, health, strengthening democracy, citizen security, decent work creation and environmental protection.

**Measurement and monitoring**

The report mentions the challenges of building quality, accessible, credible, and understandable databases that allows an adequate level of data disaggregation. It also notes that an analysis of the capabilities of the national statistical system must be conducted.

The report does not outline national reporting for SDG implementation.
In 2017, India submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

According to the report, the government prepared a draft Three Year Action Agenda covering 2017–18 to 2019–20, which addresses specific challenges facing the country and details measures to fast-track the national development agenda. In parallel, work on a 15-year vision document and seven-year strategy is in advanced stages. Most of the state governments have matched strategic insights from the national development agenda and 2030 Agenda for Sustainable Development with their own contexts and priorities.

**Baseline or gap analysis**

The National Institution for Transforming India carried out a detailed mapping of the 17 SDGs and 169 targets to nodal central ministries, centrally sponsored schemes and major government initiatives. The results of the mapping exercise were circulated and placed on the website of the National Institution for Transforming India to facilitate better awareness, common understanding and faster implementation of the SDGs. According to the report, most sub-national governments have carried out a similar mapping of the SDGs and targets to the departments and programmes in their respective states. The report does not identify gaps based on these assessments.

**Leadership, governance and institutions**

The National Institution for Transforming India, a think tank in India, provides coordination and leadership for Sustainable Development Goal (SDG) implementation. The prime minister is the chairperson of the institution. State planning and development departments are also operating as focal points for facilitating the process of SDG implementation by providing information and support. The report does not mention how non-state actors are involved in governance and institutional mechanisms for SDG implementation.

**Integration and policy coherence**

The report examines the High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. It provides a detailed examination with equal attention to the economic, social and environmental
dimensions of sustainable development and references to applicable linkages between them. While it looks at the impact of foreign policies on the SDGs globally, the report does not mention policy coherence for sustainable development.

Leave no one behind
The report makes references to the principle of leaving no one behind but does not provide information on data to ensure that no one is left behind or who is being left behind. It notes a number of programmes that target vulnerable groups, including providing essential health services to the entire population, with a special emphasis on the poor and vulnerable groups. To address multi-dimensional poverty, data from the Socio-Economic Caste Census of 2011 are being used to identify beneficiaries for development programmes based on various deprivations, aligned with the policy of ensuring that no one is left behind.

Raising awareness, creating ownership
Working individually and in coalitions, civil society organisations have partnered with the government to provide inputs, create awareness and offer feedback on SDG implementation. While it does not detail national priorities, the report notes that the Ministry of Statistics and Programme Implementation developed a list of draft national indicators in light of the global SDG indicators.

Civil society validity check
A civil society report notes that local governments are not yet actively engaged on the 2030 Agenda.

The national development agenda, which covers the SDGs, guides the capacity building of local governments as well as planning processes. In addition to integrating the SDGs into local policies and plans, local governments will also receive increased financial resources for SDG implementation, including through special purpose grants.

Civil society validity check
A civil society report states that there was no public consultation on the VNR report.

Stakeholder engagement
According to the report, the 15-year vision document and seven-year strategy are being prepared with active participation of sub-national governments, while non-state actors are engaged in the selection of national priorities. For preparation of the VNR report, a series of consultations at the national and sub-national levels were conducted in which state governments, local governments, civil society organisations, technical experts, academics, international organisations and other stakeholders participated.

Two civil society reports were prepared in relation to the VNR process. Wada Na Todo Abhiyan provided an assessment of the VNR report’s messages. VSO India responded to global civil society platform Action for Sustainable Development’s questionnaire on engagement in SDG implementation and the VNR process.

Implementing the 2030 Agenda
The report does not identify best practice, lessons learned or challenges for India. The discussion of means of implementation notes efforts by the government to raise domestic resources through tax reform, improve budgeting, and increase foreign direct investment flows. The report highlights the need for technology development and transfer for developing countries and efforts to tackle illicit financial flows. It also notes the obligation of developed countries to provide financial assistance to developing countries, especially for global public goods, such as climate change mitigation.

Partnership to realise the SDGs
Parliament has organised discussions on the SDGs, including at the southern Asian regional level. Civil society organisations have been preparing education and communication materials, conducting capacity building workshops and awareness campaigns, supporting sub-national governments with SDG integration, highlighting issues for necessary policy action, and conducting research on and documenting the SDGs as well as their relevance to the rights and entitlements of various vulnerable segments of society. Corporate sector organisations have held consultations and initiated actions in various areas including environmental sustainability, innovative climate action and inclusive development strategies on various themes.

Measurement and reporting
The report does not outline data availability for SDG implementation but notes an emphasis on assessing and improving the availability of data as well as putting in place transparent monitoring systems. The government plans to strengthen the mechanisms for SDG monitoring and reporting through a dashboard that is currently under development, with technical support from the United Nations Development Programme. The government plans to have bi-annual reviews conducted with state governments to identify good practices and challenges as well as undertake appropriate course corrections.
In 2017, Indonesia submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The Sustainable Development Goals (SDGs) have been aligned with “Nawacita,” Indonesia’s national development vision, which is integrated into the development policies, strategies and programmes of the National Medium-Term Development Plan 2015-2019 and translated into a Government Work Plan with an associated budget. Implementation occurs at the sub-national level through regional plans (Indonesia is an archipelagic country with over 17,000 islands). The government plans to formulate a 15-year SDGs Road Map, a SDGs National Action Plan and SDGs Regional Action Plans.

**Leadership, governance and institutions**
To implement the SDGs, the government set up a National Coordination Team. The team includes a Steering Committee, an Implementing Team, Working Groups, an Experts Team and a SDGs Secretariat operating under the Ministry of National Development Planning/National Development Planning Agency, which is responsible for coordination of SDG implementation and reporting by involving all stakeholders. The president and a number of ministers provide leadership for implementation. Members of the Implementing Team and Working Groups include representatives of government, philanthropic organisations, the private sector, civil society and academia as well as experts.

**Baseline or gap analysis**
According to the VNR report, Indonesia carried out a data assessment for all SDGs that provides an initial picture of Indonesia’s SDG data. The report identifies gaps in the goal-by-goal analysis, pointing to specific targets and issues such as maternal and under-five mortality rates, unmet need of family planning, digital gaps and the need for improved marine conservation and use of fisheries resources.

**Integration and policy coherence**
The report examines the High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals. It provides a detailed examination
with equal attention to the economic, social and environmental dimensions of sustainable development and references applicable linkages between them. While it refers to the impact of foreign policies on the SDGs globally, the report does not reference policy coherence for sustainable development. It refers to applying coherent coordination to data-related issues, but notes that coherent coordination between the government and non-state actors still faces the challenge of establishing synergy between programmes.

Leave no one behind
Additional data are required for Indonesia to meet the commitment to leave no one behind. To address this challenge, Indonesia has developed metadata of SDG indicators and a data portal to support the provision of disaggregated data. The national statistical office has made some efforts to develop disaggregated data for the district and city levels from existing surveys. Indonesia identifies children, women, and specific regions and communities as falling behind. The report points to infrastructure development, particularly in eastern regions, as a key strategy to reduce poverty and inequalities.

Raising awareness, creating ownership
The government prepared a communication strategy to develop awareness of and commitment to the SDGs and promote participation by all stakeholders in implementation.

National development priorities that converge with the SDGs include human development, development of leading economic sectors, and equity and addressing regional inequality. Efforts on these priorities are supported by factors including legal certainty and enforcement, security and order, politics and democracy, and governance and bureaucratic reform. The government also identified national indicators.

According to the report, socialisation of and consultation on the SDGs at the sub-national level was done in 31 of Indonesia’s 34 provinces and around 50 districts or municipalities. Allocations in regional budgets are made for SDG implementation.

Stakeholder engagement
According to the report, all stakeholders, namely the government, civil society organisations, philanthropic organisations, the private sector, academics and experts are always involved in national planning processes, with a similar approach being adopted for the VNR process.

BEST PRACTICE SPOTLIGHT
In preparing the VNR report, Indonesia adopted a set of six principles to ensure inclusivity and transparency:
1. Sharing schedules with stakeholders;
2. Conducting public campaigns to encourage active participation in the entire preparation process;
3. Using various online and offline channels to provide opportunities for the public to provide input;
4. Involving all stakeholders to ensure representation of all groups;
5. Documenting and publicising to ensure accountability and transparency of the process; and
6. Using easy-to-understand language to reduce the information gap between stakeholders.

Implementing the 2030 Agenda
The report highlights the involvement of all stakeholders as a strength in SDG implementation. It includes specific lessons learned in the examination of each goal. Major challenges include the large number of poor people, gaps between higher and lower income groups and among regions, environmental degradation, reporting against global indicators, and ensuring data disaggregation to leave no one behind.

Financing the SDGs is an issue. Although the government allocates funding for the implementation of the SDGs, the amount is insufficient to fulfil needs. The government is exploring non-government financing such as private fund mobilisation and foreign cooperation.

Indonesia has increased its knowledge-sharing activities through South-South and triangular cooperation. It is assisting other developing countries to achieve the SDGs and leave no one behind.

Partnership to realise the SDGs
Civil society and the media are supporting SDG implementation. For example, civil society and faith-based organisations have actively facilitated implementation and carried out advocacy efforts directed
Progressing national SDGs implementation: Annex 3. Country Profiles

at the national and local governments, while several national radio stations broadcast about SDG issues regularly. Philanthropic organisations and private sector actors have established a platform called Philanthropy and Business Indonesia for SDGs that holds routine meetings to coordinate, share information and socialise the SDGs within the private sector. Several universities have established a Center of Excellence on SDGs.

**Measurement and reporting**

Regarding global SDG indicators, Indonesia has between 61-70% available, including through proxy indicators. The government is addressing data gaps through better coordination and the development of its One Data initiative. To monitor SDG implementation, governors report annually on SDG achievement to the minister of national development planning/head of the National Development Planning Agency and minister of home affairs. This information is then consolidated and submitted to the president.
In 2017, Italy submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

Italy has incorporated the Sustainable Development Goals (SDGs) by drafting the National Sustainable Development Strategy 2017/2030. The strategy is an update of the Environmental Action Strategy for Sustainable Development in Italy of 2002. The government sees the new strategy as the first step towards a holistic policy framework in line with the 2030 Agenda for Sustainable Development. By the end of 2017, an action plan will be developed that includes quantitative targets, monitoring and review mechanisms and analytical models capable of measuring the impacts of policies on national priorities. Italy recognises the universal nature of the 2030 Agenda and the need to leave no one behind.

**Baseline or gap analysis**

According to the report, the preparations for the national sustainable development strategy included an assessment in terms of Italian performances with regards to the SDGs and their 169 targets. Strengths and weaknesses were identified from which to build national priorities. The report does not outline the findings of this assessment.

**Leadership, governance and institutions**

The Presidency of the Council of Ministers coordinates and manages the national sustainable development strategy, with the support of the Ministry for the Environment, Land and Sea and Ministry of Foreign Affairs and International Cooperation. These ministries are respectively responsible for the domestic and external dimensions of the 2030 Agenda. The report notes plans to further develop a governance system for the implementation and evaluation of the new strategy. The Ministry for the Environment, Land and Sea is responsible for ensuring participation by civil society and relevant stakeholders through the creation of a Forum on the Strategy for Sustainable Development.

**Integration and policy coherence**

The report does not examine the SDGs, but provides a summary analysis based on the framework of people, planet, prosperity, peace and partnership. For each of these areas, the report notes linkages to the SDGs. It gives attention to the economic, social
and environmental dimensions of sustainable development with reference to applicable linkages. The report refers to the impacts of foreign policy on sustainable development, but does not refer to policy coherence.

Leave no one behind
There is no information presented in the report on the status of data to meet the commitment to leave no one behind, identify who is being left behind or reach those being left behind. However, it notes that fighting inequalities is increasingly an inevitable goal for governments. Measures to address inequalities include the Support for Active Inclusion initiative, which introduces a financial benefit for disadvantaged families, and the Income for Inclusion initiative, a newly adopted law that provides a structural instrument to combat poverty.

Raising awareness, creating ownership
The report does not discuss awareness raising. However, Italy is preparing an action plan. The strategic objectives envisaged within the national sustainable development strategy include: decrease poverty, inequality, discrimination, unemployment (particularly among youth and women); ensure environmentally sustainable economic growth; increase opportunities for training, study and social progress; and restore the competitiveness of Italian companies through a “fourth industrial revolution” based on innovative and sustainable technologies. The report includes targets associated with national priorities. Italy includes 38 “Indicators for Equitable and Sustainable Welfare” among its SDG indicators.

With respect to localisation, the government points to the State and Regions Conference as a means to enhance local and regional authorities’ participation in implementation.

Stakeholder engagement
According to the report, there was a consultation process during the preparations for the national sustainable development strategy. Universities, non-governmental organisations, ministries and other government institutions were consulted. The report does not mention consultations during the VNR process.

Implementing the 2030 Agenda
The report does not outline best practice, lessons learned or challenges. It highlights the focus of Italy’s international development cooperation, which aims to: eradicate poverty and reduce inequality; improve people’s living conditions and promote sustainable development; protect and affirm human rights, self-dignity, gender equality, equal opportunities, and democracy principles and rule of law; and prevent conflicts and support peacekeeping processes, reconciliation, post-conflict stabilisation, and democratic institution building and strengthening. Italy has set the target of increasing official development assistance to 0.3% of gross domestic product in 2020 and 0.7% in 2030.

Partnership to realise the SDGs
Aside from involvement in national planning and plans to further involve stakeholders in implementation, the report does not provide detailed information on partnerships.

Measurement and reporting
In 2017, the national statistical office published 100 SDG indicators. In total, 173 indicators related to sustainable development were made available. The government plans to improve the coverage and number of indicators to identify relevant trends in progress on the SDGs.

The government plans to provide an annual review of implementation and results of the national sustainable development strategy. It will also explore criteria to define and create an associated monitoring system and establish a reference framework for further evaluation of activities under the strategy.
In 2017, Japan submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
Japan adopted a national strategy to implement the 2030 Agenda for Sustainable Development titled Sustainable Development Goal (SDG) Implementation Guiding Principles. The document includes a vision for Japan to be a leader in sustainable development, five implementation principles, eight priority areas, 140 specific measures and an approach to follow-up and review processes. Japan refers to the universal, human rights-based nature of the Agenda 2030 that aims to leave no one behind.

**Leadership, governance and institutions**
In 2016, the government established a new cabinet body called the SDGs Promotion Headquarters, which is headed by the prime minister and comprises all ministers. The Global Issues Cooperation Division of the Ministry of Foreign Affairs serves as the secretariat. The division facilitates all of the processes related to the SDGs under guidance and support from the Prime Minister’s Office.

According to the report, the SDGs Promotion Headquarters held roundtable meetings on the promotion and implementation of the 2030 Agenda, which was attended by representatives of a wide range of stakeholders, including non-governmental and non-profit organisations, academia, the private sector and international organisations.

**Baseline or gap analysis**
The report does not mention baseline or gap analysis.

**Civil society validity check**
A civil society report notes that the document provides a list of already existing policies and programmes related to the eight priority areas. There are no new policies and programmes aimed at tackling the SDG-related challenges that Japan is facing.

**Integration and policy coherence**
The report does not examine the SDGs but provides a detailed analysis based on country priorities, giving equal attention to the economic, social and environmental dimensions of sustainable development and recognising linkages between dimensions.
Japan plans to implement the SDGs in accordance with the principles of universality, inclusiveness, a participatory approach, an integrated approach, and transparency and accountability. These principles are meant to be taken into account in all priority areas over the course of implementation, with activities assessed against the principles. The principle of an integrated approach means that the government will endeavour to address challenges with due consideration to the three dimensions of sustainable development and foster synergies among priority areas.

Leave no one behind
The report does not provide information on data to meet the commitment to leave no one behind. Those at risk of being left behind in Japan include single-parent households and children from these households, the elderly and young people, people with disabilities, and those in vulnerable circumstances. Japan highlights its Plan for Dynamic Engagement of All Citizens to leave no one behind. Under the plan, the government is implementing measures to build a new economic system that enhances child care support and social security as a broader economic policy. Special programmes have been developed to support single-parent households and households with multiple children, as well as people with disabilities.

Raising awareness, creating ownership
According to the report, the Ministry of the Environment regularly convenes stakeholders’ meetings to share information between stakeholders and raise awareness of the SDGs. Japan plans to raise public awareness through communication campaigns in collaboration with others. To engage youth, Japan is promoting Education for Sustainable Development, as well as encouraging learning about the SDGs in all settings including schools, households, workplaces and local communities.

Japan has selected national priorities and indicators. Its eight priority areas include: empowerment of all people; good health and longevity; creating growth markets, revitalisation of rural areas, and promoting science technology and innovation; sustainable and resilient land use and promoting quality infrastructure; energy conservation, renewable energy, climate change countermeasures, and a sound material-cycle societies; conservation of the environment; achieving peaceful, safe and secure societies; and strengthening the means of implementation of the SDGs.

The government plans to support local governments to contribute to the SDGs. Certain cities have developed initiatives, some of which are highlighted in the report.

Stakeholder engagement
According to the report, non-state actors were engaged in identifying national priorities and preparing the VNR report. A civil society report was also prepared in response to global civil society platform Action for Sustainable Development’s questionnaire on SDG implementation and the VNR process.

Civil society validity check
A civil society report notes that most local governments are waiting for directions from the national government and not engaged. A few exceptions exist for local governments with powerful independent leaders.

Implementing the 2030 Agenda
The government plans to use financial resources as policy incentives to foster individual and collective efforts of government institutions to implement the SDGs.

According to the report, Japan provided approximately US$16.8 billion in official development assistance on a gross basis in 2016. A national Advisory Board for the Promotion of Science and Technology Diplomacy recommended that Japan increase efforts to help meet the technology needs of partner countries through international cooperation.

Partnership to realise the SDGs
The report includes a government commitment to cooperate with local governments, non-governmental and non-profit organisations, academia, the private sector, international organisations and other entities, parliamentarians, scientists and cooperatives to implement the SDGs. The report highlights a range of initiatives by stakeholders, including parliamentarians, civil society, the private sector and the media.

Measurement and reporting
Japan expects to be able to cover around 40% of the global SDG indicators, provided that proxy indicators (which use data produced in the national context that are not exactly the same as those used for a global indicator) are included.

Japan plans to follow up and review progress with a focus on the High-level Political Forum Summit in 2019. Specific implementation measures will be monitored to discern whether they are being implemented in accordance with the main principles of the SDG Implementation Guiding Principles.
In 2017, Jordan submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
To implement the 2030 Agenda for Sustainable Development, the government developed a SDG Roadmap that focuses on community awareness, prioritisation and mapping, capacity development, mainstreaming in national and sub-national planning frameworks, costing, strengthening the national statistical system, and monitoring and evaluation. The report does not mention the universal, human-rights based nature of the 2030 Agenda or the importance of leaving no one behind.

**Leadership, governance and institutions**
The Higher Steering Committee for Sustainable Development Goal (SDG) implementation is headed by the prime minister and includes relevant ministers, parliamentarians and representatives of the private sector, civil society organisations, women, youth, and local communities. This committee is a restructured version of the Higher National Committee for Sustainable Development. A Coordination Committee with 18 working groups was also established. The Ministry of Planning and International Cooperation serves as the focal point for SDG implementation.

**Baseline or gap analysis**
According to the report, mapping and ensuring coherence of SDGs, targets and indicators with national policy and planning frameworks are part of the SDG Roadmap. The government engaged in mapping the goals, targets and indicators with those in the Jordan 2025 document as well as the objectives, policies, initiatives and indicators of the Executive Development Programmes, which constitute the country’s national plan for the coming years. The mapping demonstrated that all goals and most targets are important for Jordan, albeit to varying degrees, especially at the target and indicator levels.

**Integration and policy coherence**
The report does not examine the SDGs but provides a detailed analysis based on people, planet, prosperity, peace and partnership with equal attention to the economic, social and environmental dimensions of sustainable development, including references to
applicable linkages between dimensions. It does not mention policy coherence for sustainable development, but includes an assessment of domestic and foreign policies towards the realisation of the SDGs globally, with a particular emphasis on Jordan’s contributions in terms of hosting refugees.

Leave no one behind
The status of data to meet the commitment to leave no one behind is unclear. Jordan identifies women, youth, children, people with disabilities and the working poor as at risk of being left behind. The report notes that Jordan’s SDG consultation process gave special attention to ensuring the inclusion of women, youth, children, people with disabilities, and representatives of Syrian and other refugee communities. Jordan provides limited direct interventions to support those most in need. The government is also making use of decentralised approaches to address the needs of and regional disparities among governorates.

Raising awareness, creating ownership
According to the report, the government used the VNR and nationalisation processes to raise awareness through consultations and other ways, such as social media.

Four main areas emerged as critical for the population in the upcoming period: strengthening links between education and the labour market, and entrepreneurship to reduce unemployment and ensure decent work; combating stereotypes to achieve gender equality and decrease geographical disparities, reducing poverty and ensuring equal access to social services; enhancing accountability, respecting human rights and contributing to regional stability; and enhancing awareness of environmental issues, promoting renewable energy and addressing water scarcity. The government is planning to include SDG indicators directly into its plans going forward.

In terms of localisation, the SDG Roadmap includes mainstreaming the SDGs within sub-national plans or at the governorate level, starting with two governorates on a pilot basis and then gradually reaching all governorates. There is a need for greater engagement in SDG implementation at the sub-national level.

Stakeholder engagement
The Ministry of Planning and International Cooperation prepared a stakeholder engagement strategy to ensure the widest participation from all stakeholders in SDG implementation and preparation of the VNR report.

The strategy laid out consultation plans and took into account challenges for meaningful participation, namely difficulties in reaching the most marginalised, the tendency to involve larger non-governmental organisations rather than smaller community-based organisations and individuals, and time constraints.

Implementing the 2030 Agenda
Jordan highlights a number of lessons learned for SDG implementation, including the importance of genuine partnership and an increased role for the private sector, strong coordination among all government institutions and non-state actors to avoid duplication of efforts, the importance of quality technical assistance and capacity development, and the need for an increased focus on promoting ownership and raising awareness.

A key challenge highlighted in the report is the adverse effect of regional instabilities on Jordan. Financing for development has become critically important in light of Jordan’s role in hosting Syrian refugees. Jordan is working on tapping into and leveraging traditional and non-traditional sources of finance such as official development assistance, public and private partnerships, and Islamic finance. The government calls on development partners to implement their commitments under the Jordan Compact adopted in London in 2016 and in the Jordan Output Document adopted in Brussels in 2017.

Partnership to realise the SDGs
Civil society organisations have been heavily engaged in strengthening national ownership through awareness raising and consultations. Jordan is also working with its development partners to combine financing for development with stronger policy guidance, more effective technical assistance and enhanced capacity building. The United Nations Country Team in Jordan provided support for the VNR process.

Measurement and reporting
Data availability is unclear from the report, but the SDG Roadmap mentions strengthening the national statistical system and improving data availability through technical and financial support. A monitoring system is under development, the outputs of which will include regular progress reports and an online monitoring dashboard.
In 2017, Kenya submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

Kenya Vision 2030 is well aligned with the 2030 Agenda for Sustainable Development and its implementation is directly linked to achieving the Sustainable Development Goals (SDGs). Under Kenya Vision 2030, the Second Medium Term Plan for the 2013–17 period was in its third year when the SDGs were adopted, but early consultations on the 2030 Agenda informed the plan. The Third Medium Term Plan is set to mainstream international and regional commitments, including the 2030 Agenda and Africa’s Agenda 2063. The SDGs have been incorporated in government institutions’ performance contracts and strategic plans. A SDGs road map was also prepared to guide the transition process from the Millennium Development Goals to SDGs.

**Leadership, governance and institutions**

Following on its role in the implementation of the Millennium Development Goals, the Ministry of Devolution and Planning is mandated to coordinate SDG implementation and monitoring in Kenya. The ministry is supported by the Inter-Agency Committee on the SDGs, which comprises representatives of government, United Nations agencies, civil society and the private sector. A SDG Inter-Agency Technical Working Group provides strategic oversight of SDG programme design and implementation. It makes decisions on strategic programme choices at the national level and has the responsibility of ensuring that various government institutions implement the SDGs and report on progress in a timely manner.

**BEST PRACTICE SPOTLIGHT**

Kenya developed a SDGs road map to guide implementation in consultation with national and local governments, civil society and development partners. Activities covered by the road map include mapping stakeholders and establishing partnerships, advocacy and sensitisation, localisation, mainstreaming and accelerating implementation, resource mobilisation, tracking and reporting, and capacity building.
Baseline or gap analysis
The VNR report notes that Kenya has baseline data between 2009 and 2014 for most SDG indicators. There is a lack of baseline data to measure progress on the implementation of environment-related SDGs, including with respect to marine life. Areas where additional efforts are needed to realise the SDGs include ensuring healthy lives and well-being, adequate, safe and reliable water, and access to electricity.

Integration and policy coherence
The report covers the economic, social and environmental dimensions of sustainable development in its detailed analysis of all 17 SDGs. However, there are limited references to the linkages between the dimensions in the discussions of specific goals.

Policy coherence for sustainable development is not discussed. Yet, the report notes that Kenya will take an integrated approach and ensure that local-national linkages are coherent in implementation.

Notably, the importance of addressing climate change features strongly in the report, which outlines a wide range of efforts to address climate change and its impacts.

Civil society validity check
Agenda 2030 has not been officially translated into local languages. Civil society organisations would like this issue to be addressed by the government and development partners to ensure no one is left behind when implementing the SDGs in Kenya.

Leave no one behind
The report includes a chapter on leaving no one behind. It notes the importance of ensuring progress for poor people, women, youth and people with disabilities, as well as social protection programmes that target particularly vulnerable groups to ensure no one is left behind. The government sees social protection as a key way to address domestic inequality.

Raising awareness, creating ownership
According to the report, the government supported a number of consultations with a wide range of local stakeholders during the lead-up to the adoption of the SDGs and the development of the SDGs road map.

To ensure ownership of the SDGs, the government examined the extent to which the global goals converge with Kenya’s development objectives. National priorities are organised around three pillars – economic, social and political – that capture the main elements of the SDGs. The SDGs are being localised in Kenya through mainstreaming into County Integrated Development Plans.

Stakeholder engagement
According to the report, non-state actors were consulted throughout the process of identifying national priorities for the SDGs and during the preparation of the VNR report. They were invited to prepare inputs and reports for the VNR process and part of the VNR report drafting team. Civil society organisations prepared a spotlight report ahead of the High-level Political Forum as well as a shadow report.

Implementing the 2030 Agenda
The report mentions four main challenges for SDG implementation – inadequate disaggregated data, high stakeholder expectations, inadequate funding, and ensuring proper mainstreaming of the SDGs into policies, plans and budgets.

Partnership to realise the SDGs
The report notes the formal involvement of civil society in SDG implementation including through the Inter-Agency Committee on the SDGs. A private sector SDG Forum is being planned and a youth caucus is at the early stages of formation. A Parliamentary SDGs Caucus will also be formed. The report does not set out priorities for support by development partners or the role that they should play. It does, however, note that the United Nations country office and civil society organisations provided financial and technical support during the VNR process.

Measurement and reporting
Kenya has 128 indicators available to monitor the SDGs, but whether the report refers to global or national indicators in this context is unclear. Data are specifically unavailable for neglected tropical diseases, cancer, outbreak diseases, water-related issues and climate issues.

The SDGs will be tracked at the national and sub-national levels through monitoring and evaluation of policies, projects and programmes outlined in Second Medium Term Plan using a results-based monitoring framework. SDG indicators will be integrated into regular surveys.
In 2017, Luxembourg submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
In 2017, the government adopted a 2030 Agenda implementation report. The report was prepared by the Interdepartmental Commission for Sustainable Development as the starting point for analysing the effectiveness of policies put in place and developing the means and tools required for Sustainable Development Goal (SDG) implementation.

The VNR report is a first step towards the elaboration of Luxembourg’s next national plan for sustainable development that will be aligned with the 2030 Agenda for Sustainable Development. The country intends to develop a new general strategy for cooperation, accompanied by a development effectiveness action plan, and bring related instruments into compliance with the 2030 Agenda.

**Leadership, governance and institutions**
In Luxembourg, the Ministry of Sustainable Development and Infrastructure and the Ministry of Cooperation are responsible for leading the 2030 Agenda implementation process. The Interdepartmental Commission for Sustainable Development – a governmental entity composed of officials from ministries and departments – is the central instrument for coordination. Its composition has been reviewed, following the adoption of the 2030 Agenda, to include all ministers. The VNR report also notes that a close link has been established between the commission and the Inter-ministerial Committee for Development Cooperation to ensure coherence and complementarity.

Luxembourg also has the Superior Council for Sustainable Development, which represents civil society and acts on its own initiative or at the request of the government. It is mandated to provide research and studies in all areas related to sustainable development, and to advise the government on any measures related to national sustainable development policies and the implementation of the country’s international commitments.

**Baseline or gap analysis**
According to the VNR report, Luxembourg’s 2030 Agenda national implementation report provides a mapping of the SDGs and their
targets and analyses them for their national application. An annex in the VNR report includes a table that syntheses sustainable development trends discussed in the current National Plan for Sustainable Development and compares them with the SDGs to assess coherence between the plan and 2030 Agenda. The VNR report discusses priority areas where additional progress is needed and links them to the SDGs. The priority areas are social inclusion, diversification of the economy, sustainable transport, environment protection and climate protection.

**Integration and policy coherence**
The report looks at all of the SDGs and provides a detailed assessment, with equal attention to the economic, social and environmental dimensions of sustainable development. It provides an assessment of domestic and foreign policies on the realisation of the SDGs globally. It links national priorities to all of the SDGs except SDG 2 on zero hunger and SDG 14 on life below water and notes that the 17 SDGs will be the basis of the country’s cooperation policy and framework for general strategy.

The report refers to policy coherence, policy coherence for development and policy coherence for sustainable development. It states that an integrated approach will have the effect of ensuring political coherence by exploiting the gains from interconnections between different policy areas, avoiding difficult trade-offs and mitigating possible conflicts between certain objectives and their negative consequences. It also notes that the approach pursued by Luxembourg through its National Plan for Sustainable Development aims to take into account all policies that are likely to have an impact on the three dimensions of sustainable development.

**Leave no one behind**
The report notes that social equality and the protection of the poorest people are among the fundamental priorities of government policy, particularly in terms of social protection and security. Many examples of efforts taken by Luxembourg to meet the commitment to leave no one behind are outlined in the report in the context of social inclusion, including those on access to accommodation, modernisation of family policy and the integration of migrants. Groups targeted in the country’s efforts to leave no one behind include women, poor families, children and youth, migrants and refugees, and people with disabilities.

**Raising awareness, creating ownership**
The Superior Council for Sustainable Development has initiated a communication campaign on the 2030 Agenda in the form of an online platform to raise awareness and highlight opportunities and solutions related to the implementation of the 17 SDGs in Luxembourg.

Outlined in the VNR report and linked to several SDGs are Luxembourg’s national priorities, which include ensuring social inclusion and education for all, diversifying the economy, planning and coordinating land use, ensuring sustainable mobility, stopping environmental degradation and protecting the climate. The report indicates that the government initiated the process of selecting indicators to monitor the evolution of sustainable development at the national level.

**Stakeholder engagement**
The Superior Council for Sustainable Development is mandated to advise the government on how to involve national stakeholders in the implementation of the Agenda 2030 and the SDGs. The VNR report is unclear about whether non-state actors were engaged in its preparation or if they were consulted on national SDG priorities. The Superior Council for Sustainable Development plans to organise a workshop with young people from 16 to 26 years of age to discuss their expectations and priorities for Luxembourg and the world in 2030.

**Implementing the 2030 Agenda**
The report indicates that Luxembourg’s official development assistance has been 1% of its gross national income annually since 2009. It highlights the need to leverage complementary private investment to support development. The government is committed to financing sustainable development, notably by setting up a Luxembourg Sustainable Development Finance Platform aimed at bringing sustainable project promoters closer to their financial contributors and potential investors.

**Partnership to realise the SDGs**
The Superior Council for Sustainable Development established an inventory of actions for the 2030 Agenda that are implemented by the private sector and civil society organisations, municipalities and citizens. According to the VNR report, the Luxembourg Directorate for Cooperation holds meetings every six weeks with the Cooperation Circle of Development NGOs (le Cercle de Coopération des ONG de développement) to support the implementation of the 2030 Agenda. The report also includes specific examples of multi-stakeholder partnerships related to the SDGs.
**Measurement and reporting**

The report does not mention much about data availability, disaggregated data and national reporting on the SDGs. While unclear in the report, the next national plan for sustainable development that will be aligned with the 2030 Agenda might serve as a reporting tool on SDG implementation.
In 2017, Malaysia submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
To guide Sustainable Development Goal (SDG) implementation, the government formulated a National SDG Roadmap. The VNR report does not reference the universal, human rights-based nature of the 2030 Agenda for Sustainable Development.

**Leadership, governance and institutions**
The national multi-stakeholder governance structure for SDG implementation is led by the National SDG Council, which is chaired by the prime minister. The council plans and monitors implementation and is supported by a National Steering Committee, which includes five SDG Cluster Working Committees. Task forces were also established for each of the goals. The SDG Cluster Working Committees identify indicators for each goal, develop and implement programmes and report progress to the National SDG Council. Each committee includes representatives of government, civil society organisations (CSOs), the private sector, academia, United Nations agencies and youth.

**BEST PRACTICE SPOTLIGHT**
By including non-governmental organisations, CSOs and private sector representatives in SDG Cluster Working Committees, Malaysia has formalised their participation in the national development process.

**Baseline or gap analysis**
The report notes that Malaysia conducted studies on data readiness and gaps, but provides no further information on the approach to and results of the analyses. Gaps for the SDGs are presented throughout the report in terms of areas where further progress is needed, such as enhancing the social protection system and achieving holistic marine and coastal management at both the federal and state levels.
Integration and policy coherence

The report examines a limited set of SDGs:

SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water, SDG 15 on life on land and SDG 17 on partnerships for the goals. A summary of each goal is provided, with the economic, social and environmental dimensions of sustainable development being covered equally and references being made to applicable linkages between them. Policy coherence for sustainable development is not mentioned in the report. However, a study was conducted in 2015 on policy coherence, governance, human capital and data responses for the SDGs. Malaysia plans to replicate the multi-stakeholder governance structure for SDG implementation at the state level to enhance vertical and horizontal policy coherence.

Leave no one behind

Additional data are required to meet the commitment to leave no one behind in Malaysia. Those at risk of being left behind include the bottom 40% of households in terms of income, the elderly and people with disabilities. The report notes that efforts to increase the incomes of the bottom 40% of households have been made by the government and one of the pillars of the Eleventh Malaysia Plan 2016-2020 is to enhance inclusiveness towards an equitable society.

Raising awareness, creating ownership

According to the report, the government held several events to promote awareness and participation of non-state actors in SDG implementation. The government is also planning to organise “road shows” to raise awareness, increase knowledge and create a sense of ownership of the 2030 Agenda.

The Eleventh Malaysia Plan 2016-2020 is premised on the three goals of the country’s longer-term vision, namely high income, inclusivity and sustainability. According to the report, the plan puts people at the centre of all development efforts and aims to ensure that no segment of society is left behind in participating in and benefiting from the country’s development. Malaysia plans to localise the SDGs by replicating the national multi-stakeholder governance structure at the state level.

Stakeholder engagement

According to the VNR report, non-state actors were engaged in the identification of national priorities. A civil society shadow report notes that the government organised two national symposia, which were not explicitly stated in the VNR report, as well as set up the National Steering Committee to consult and get feedback from all ministries, civil society and the private sector in the preparation of the VNR report.

A civil society report was prepared in response to global civil society platform Action for Sustainable Development’s civil society questionnaire on SDG implementation and the VNR process.

Implementing the 2030 Agenda

While not specifically identifying what follows as best practice, the report notes that Malaysia’s development achievements have been made possible through the use of pragmatic and comprehensive development plans, recognition of inclusivity as critical for sustaining long-term prosperity and unity, and improvements to service delivery through collaborative partnerships with the private sector, non-governmental organisations and civil society. It also highlights four lessons, namely the importance of breaking down silos to address complex issues, local capacity, public participation and social trust, and balancing the costs and benefits of measuring all SDG indicators.

The report recognises that Malaysia has benefited from official development assistance, but notes that as Malaysia reaches developed country status, such assistance will no longer be accessible. In anticipation of this situation, the government is exploring alternative methods to finance development needs. The report also highlights Malaysia’s provision of South-South and triangular cooperation and its trade policy that allows almost 90% of products by least developed countries to enter the country on a duty-free basis.

Partnership to realise the SDGs

The Malaysian CSO-SDG Alliance is an informal grouping of CSOs that have come together for networking, joint cooperation, action and liaison with the government in commitment to the effective implementation of the SDGs in Malaysia. The alliance comprises four umbrella civil society organisations and 25 individual organisations and institutions, which means that there are more than 200 CSOs involved in discussions and mapping exercises intended to identify areas for grassroots involvement on the SDGs. The United Nations Global Compact Network Malaysia co-organised a one-day SDG Business Summit that brought together more than 300 business leaders, policy makers and corporate social responsibility practitioners for discussions and insights on the SDGs. In terms of international partners, Malaysia will need funding and technical assistance to develop national indicators and baselines to assess progress.
Measurement and reporting

Based on a preliminary assessment of data availability, 82% of the global SDG indicators are identified as available, partially available or partially available but in need of further development. The report notes the need to improve the availability and use of data disaggregated by gender. Malaysia plans to strengthen the national statistical system with the development of new indicators and assistance to government institutions to expand their data coverage. An integrated database system will be developed to enable systematic data compilation, monitoring, evaluation, reporting and sharing of SDG datasets and information across institutions and regions.
In 2017, the Maldives submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

### Incorporating the SDGs
The government will promote the mainstreaming of the Sustainable Development Goals (SDGs) in sectoral policies, plans and strategies, develop a review and follow-up mechanism to provide coherence between government institutions, and ensure the integration of the economic, social and environmental dimensions of sustainable development into the SDG implementation process. Some institutions overseeing certain sectors, namely education, health, energy, waste management, fisheries, water and sanitation, and local governance, have incorporated the SDGs into policy documents and action plans. The report does not reference the universal, human rights-based nature of the 2030 Agenda for Sustainable Development.

### Baseline or gap analysis
The report notes that a stocktaking of data availability was carried out, including an assessment of various ministries responsible for data collection. It identifies gaps in relation to strengthening the national statistical system. It also highlights gaps in terms of SDG progress in the goal-by-goal analysis.

### Integration and policy coherence
All SDGs are examined in the report, though only through a summary with limited details. The report gives equal attention to the economic, social and environmental dimensions of sustainable development but makes limited references to linkages between them. It does not mention policy coherence for sustainable development.

### Leave no one behind
The report notes that the gap between lower-income groups and the affluent is widening and there are considerable socio-economic
and socio-cultural divides between urban and rural islands, as well as genders and age groups, with regards to access to basic social services.

It highlights initiatives to address the needs of different vulnerable groups in the country, such as the creation of opportunities for people with disabilities in the job market and safety net mechanisms for vulnerable groups.

**Raising awareness, creating ownership**

According to the report, the current focus is on creating awareness of the SDGs among all stakeholders to improve engagement in the implementation process. Focused awareness sessions are planned for parliamentarians, local councils, members of the judiciary, non-governmental organisations, students and the general population for the third quarter of 2017. Efforts have also been made to forge new partnerships with the media and intensify existing ones.

The report does not set out national priorities, though notes that national priorities for SDG targets will be identified through consultations with implementing institutions and input from civil society and the private sector. In terms of localisation, the Local Government Authority has aligned its Development Plan (2017-2021) with the SDGs, which will be implemented by island councils.

**Stakeholder engagement**

The VNR report does not outline stakeholder engagement in setting national priorities or preparing the report. It does, however, note that stakeholders will be engaged in identifying national priorities for SDG targets.

**Implementing the 2030 Agenda**

According to the report, the lack of technical expertise, particularly in terms of data collection and management, remains a major hurdle in SDG implementation. This lack is compounded by the lack of trained staff and adequate resources for data collection and management. Other key challenges include securing funds required for SDG implementation and capacity building to achieve the goals throughout the implementation process. In addition, due to the population dispersion, additional efforts are needed to leave no one behind.

Financing and resource mobilisation from domestic sources and development partners are needed to attain SDG targets. Supported by international financial institutions, the government initiated ambitious and transformational reforms towards modern taxation in 2009. The report also references official development assistance and South-South cooperation as sources of finance.

**Partnership to realise the SDGs**

The report recognises that the realisation of the SDGs requires strong coordination and cross-sectoral collaboration between government institutions, development partners, local governments, the private sector and civil society. A national forum is being organised, which will bring together non-governmental and civil society organisations from across the country to discuss mechanisms for contribution and participation. The forum will focus on empowering and catalysing action on the ground while promoting the participatory nature of the SDGs.

The report also points to the importance of engaging the media and population in promoting national ownership of the SDGs. The government plans to continue engagement with the Public Service Media in disseminating information related to the SDGs. Furthermore, a capacity building workshop is scheduled for journalists from various media outlets in order to enhance their skills for reporting on the SDGs.

Information sharing and awareness sessions have been conducted for state-owned enterprises to encourage their participation in implementing the SDGs.

In terms of international partners, the country requires technical assistance and financial support for institutionalising a monitoring framework for the SDGs. Aligning monitoring of the SDGs with that of sectoral plans and other international reporting obligations will require capacity building in data collection and management.

**Measurement and reporting**

The report outlines data availability for the Maldives: 27% of SDG indicators have data that are collected through current statistical efforts, 23% of indicators require data that can be collected with additional effort, there is no established mechanism to compile data for 15% of indicators, and data are unavailable and no methodology for collection exists for 35% of indicators. The need to strengthen the maintenance of administrative data is a key priority. The report notes that development of a monitoring framework is planned for late 2017. The framework will be used to report on the SDGs and their targets.
In 2017, Monaco submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The report notes that achieving the Sustainable Development Goals (SDGs) is a priority for the government and five ministries worked together to carry out a SDG “diagnosis” (diagnostic). It does not specify how the SDGs are or will be articulated in national frameworks and policies more broadly, but based on the diagnosis, the government has already undertaken many efforts to implement the goals.

**Leadership, governance and institutions**
An inter-ministerial working group, under the authority of the Minister of State (head of government) and led by the Ministry of Foreign Affairs and Cooperation, has been created. It is composed of a representative from each ministry and involves the General Secretariat of the Government, General Inspectorate of the Civil Service and Monegasque Institute of Statistics and Economic Studies (Monaco Statistics).

**Baseline or gap analysis**
The VNR report and SDG “diagnosis” illustrate Monaco’s efforts to implement specific SDGs, namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 9 on industry, innovation and infrastructure, SDG 13 on climate action, SDG 14 on life below water and SDG 17 on partnerships for the goals.

The report also briefly outlines the outcome of an assessment of the 17 SDGs, which shows that four have partially been achieved in the country: SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 12 on responsible consumption and production and SDG 17 partnerships for the goals. According to the report, the other 13 SDGs have already been achieved.
innovation and infrastructure, SDG 13 on climate action, SDG 14 on life below water and SDG 17 on partnerships for the goals.

The report addresses the economic, social and environmental dimensions of sustainable development, but has a relatively greater focus on social aspects. It makes limited references to the linkages between dimensions in the analysis of the goals. It does not refer to policy coherence for sustainable development but assesses national and international initiatives towards the realisation of the SDGs globally.

Leave no one behind
People with disabilities, the elderly, children, refugees, women and girls, and poor populations are among the groups that are targeted by Monaco to meet the commitment to leave no one behind. As part of the measures to ensure that no one is left behind, the report notes Monaco’s international development efforts, including projects in Tunisia and Niger. The government offers support to all people who live in the country and cannot meet basic needs due to health, disability, age or exceptional circumstances. It also gives special attention to the poorest populations in marginalised areas in order to reduce social and territorial inequalities in access to health benefits.

Raising awareness, creating ownership
The report indicates that an inclusive approach has been adopted to encourage local stakeholders to take ownership of the SDGs and sustainable development issues, but does not provide details about the actions carried out. It notes that the government supports local non-governmental organisations to develop actions related to the 2030 Agenda, but does not elaborate further. It also outlines initiatives at the local level that are related to specific SDGs. For instance, it indicates that the Responsible Trade label “Commerce engagé” (Responsible Trade) was introduced in 2014 to encourage responsible consumption and promote local economies that generate less packaging, less waste and fewer greenhouse gas emissions.

Stakeholder engagement
No information is provided in the report on whether domestic stakeholders were consulted on SDG priorities or non-state actors were engaged in the preparation of the VNR report.

Implementing the 2030 Agenda
The report indicates that Monaco’s official development assistance will reach more than 500 per inhabitant in 2020 and that the country devotes more than 60% of its assistance to least developed countries.

According to the report, Monaco provides capacity development in developing countries in specific SDG areas. For example, it has developed support measures related to climate change adaptation and capacity building for the most vulnerable countries, particularly small island developing states.

The report outlines several initiatives put in place to strengthen scientific research, innovation, research and development and to provide support for technological innovation, including for the development of renewable energies and thalassothermy (SDG 14 on life below water). It also outlines efforts to facilitate access to information and communications technology nationally and in some LDCs.

Partnership to realise the SDGs
The report does not clearly specify how civil society organisations are or will be involved in SDG implementation, but notes their involvement in specific initiatives such as the Industry Observatory, an advisory entity created by the prince of Monaco to monitor the evolution of European regulations, which is related to SDG 9 on industry, innovation and infrastructure.

The report also refers to public-private partnerships in relation to initiatives currently in place to achieve the SDGs. For instance, it indicates that based on a public-private partnership, high school students benefit from the My Solidarity Class (Ma Classe Solidaire) project, which seeks to make them aware of sustainable development and social economy challenges as well as mobilise them around innovative and impactful solidarity projects. Other examples of partnership projects include the Monaco Blue Initiative, an international think tank co-organised by the Oceanographic Institute and the Prince Albert II of Monaco Foundation, which brings together experts and high-level political and economic decision makers to explore challenges related to the sustainable management of oceans and innovative solutions to address them.

Measurement and reporting
Measurement and reporting are not covered in depth by the report. With regards to data and indicators, the report mentions that Monaco complies with the global SDG indicators but notes that some of them cannot be applied at this time due to unavailability of data and statistics. It indicates, however, that complementary indicators will be considered to improve monitoring of the SDGs and government policies.
Nepal – Yellow

In 2017, Nepal submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The report notes that the government has begun to integrate the Sustainable Development Goals (SDGs) into the Fourteenth Plan (2016/17–2018/19). The annual programmes and budgets for 2016/17 and 2017/18 have been aligned with the SDGs by introducing SDG coding in all programmes. The report also lists a number of sectoral plans into which the SDGs are being integrated.

**Civil society validity check**
A civil society report states that there are no representatives from civil society organisations on the main SDG implementation committees.

**Leadership, governance and institutions**
According to the report, the government formed three levels of committees to implement the SDGs. The prime minister and chairman of the National Planning Commission chair the high-level SDGs Steering Committee. A SDGs Coordination and Implementation Committee and nine SDGs Implementation and Monitoring Thematic Committees were also established. Committees are mandated to include “invitee” members from the private sector, cooperatives, civil society and the media, among others.

**Baseline or gap analysis**
The report states that major medium- and long-term sectoral plans and strategies were reviewed for their alignment with the SDGs. The results of this review are not included, but unfinished business from the Millennium Development Goal period is noted.

**Integration and policy coherence**
The report examines SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure and SDG 17 on partnerships for the goals (all High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” goals, with SDG 14 on life below water excluded). It provides detailed examinations and covers the economic, social and environmental dimensions of sustainable development, but with a limited focus on the environment and limited references to the linkages between goals.
Leave no one behind
Additional data are required to meet the commitment to leave no one behind in Nepal. The government notes that sectoral plans, long-term strategies and perspective plans need further aligning with the SDGs, with attention to disaggregating targets and indicators at the sub-national level by sex, age, social group and disability. The report identifies poor and marginalised people, smallholder farmers, peasants, children and women as at risk of being left behind. The Constitution of Nepal is the main guiding document for all new policies, plans, programmes and other interventions that ensures no one is left behind. According to the report, prioritisation needs to be given to the SDGs that have multiplier effects and larger impacts on those being left behind.

Raising awareness, creating ownership
The report outlines civil society awareness-raising programmes on the SDGs and does not refer to government initiatives. The Fourteenth Plan has five major pillars that link to the SDGs: infrastructure (SDG 6 on clean water and sanitation, SDG 7 on affordable and clean energy, SDG 9 on industry, innovation and infrastructure and SDG 11 on sustainable cities and communities), social (SDG 3 on good health and well-being and SDG 4 on quality education), economic (SDG 1 on no poverty, SDG 2 on zero hunger, SDG 8 on decent work and economic growth, SDG 9 on industry, innovation and infrastructure, SDG 10 on reduced inequalities and SDG 12 on responsible consumption and production), governance (SDG 16 on peace, justice and strong institutions and SDG 17 on partnerships for the goals) and cross-cutting (SDG 5 on gender equality, SDG 13 on climate action and SDG 15 on life on land). According to the report, country-specific SDG targets and indicators have been developed.

New provincial and local government levels are being formed. As such, the SDGs have yet to be fully aligned and incorporated in planning and budgeting processes at the sub-national level.

Stakeholder engagement
The report does not mention stakeholder engagement in the identification of national priorities, but notes that the National Planning Commission invited comments, suggestions and feedback from all stakeholders on the VNR report by uploading a draft version for review on its website. In addition, a few consultation meetings were held with representatives of the private sector, cooperatives, civil society, youth and the media.

Two reports were prepared by civil society for the VNR process. Several civil society organisations submitted a joint report to the National Planning Commission. VSO Nepal and Beyond Beijing Committee responded to global civil society platform Action for Sustainable Development’s questionnaire on SDG implementation and the VNR process.

Implementing the 2030 Agenda
The report acknowledges that partnerships between the government, the private sector, cooperatives, civil society and development partners during the Millennium Development Goal period were instrumental in contributing to greatly reduced levels of poverty and improved social indicators. Nepal’s sector-wide approaches in health, education, and water and sanitation are highlighted as best practice since these sectors have demonstrated better results than others. The report also points to a number of challenges. The SDG indicators need to be aligned with the annual work plans of all government institutions to help monitor progress on the SDGs. The availability of disaggregated data needs to be improved. Large investments in infrastructure are also needed.

A SDG needs assessment, costing and financing strategy is underway to articulate financing needs. The report refers to domestic and external resources to support SDG implementation, including taxes and official development assistance. Nepal needs better coordination and cooperation with its development partners and the international community for technology transfer to enable it to achieve the SDGs. Partnerships are also being strengthened with the private sector, cooperatives, civil society, development partners and the international community to meet large capacity building needs.

Partnership to realise the SDGs
The constitution has a provision to form a parliamentary committee to monitor and evaluate the implementation of policies, including SDG implementation. Civil society organisations have formed a SDG forum. The private sector is seeking incentives to increase investments in production and infrastructure, while cooperatives have undertaken initiatives under the slogan of “Cooperatives for Sustainable Development” and organised many SDG-related initiatives.

Measurement and reporting
Nepal’s database of development information is limited and available statistics are insufficiently disaggregated. The government highlights the need for new surveys or to tailor existing surveys to fill data gaps and create baseline data for a number of targets. The national statistical office established an inter-ministerial SDG Indicators Coordination Committee to coordinate tracking progress on the SDGs.

The National Planning Commission and ministries use results-based monitoring frameworks to track progress using indicators mostly drawn from the SDGs.
In 2017, the Netherlands submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development as part of the submission by the Kingdom of the Netherlands.

**Incorporating the SDGs**
According to the report, the Netherlands has incorporated the Sustainable Development Goals (SDGs) into policies, but limited details are provided.

**Leadership, governance and institutions**
In the Netherlands, responsibilities for SDG implementation have been assigned to relevant ministries, with the minister for foreign trade and development cooperation in charge of overall coordination. According to the report, a SDG network of focal points with representatives from each ministry and the Association of Netherlands Municipalities has been established and meets regularly. It is chaired by a specially appointed high-level coordinator for national SDG implementation, who is assisted by a small secretariat. The report does not mention formal representation of non-state actors in governance or institutional arrangements.

**Baseline or gap analysis**
According to the report, the Netherlands was one of the first countries to conduct a baseline survey of national efforts to achieve the SDGs. The country is planning a report by the national statistical office that will highlight areas where implementation is lagging behind and help enhance data availability for SDG monitoring.

The Netherlands needs to accelerate progress in areas where it is underperforming, like increasing the use of renewable energy, climate action, gender equality and biodiversity. Data also show that there is room for improvement in the areas of social inclusion and addressing environmental pressures. In 2015, more people in the Netherlands were living below the national poverty line than in 2006.

**Integration and policy coherence**
The report provides a summary examination of all SDGs with equal attention to economic, social and environmental dimensions and reference to applicable linkages between dimensions. Each subsection in the review of SDGs discusses implementing the SDGs
at home and abroad, though information is provided at a summary level with limited details.

According to the government, the adoption of the SDGs has reinvigorated attention to policy coherence for development. Having aligned non-aid policies with the interests of the poor, it sees itself as a frontrunner in this context. In 2016, the Netherlands adopted an action plan on policy coherence for development with time-bound goals and actions aligned with the SDGs, which focuses on important areas such as climate, remittances, responsible business conduct, access to medicine and food security.

Leave no one behind
According to the report, delivering on the promise to leave no one behind requires effective and early actions to ensure that everyone benefits from economic growth. Men and women, rich and poor, straight and gay, young and old must all be involved in creating and sharing the benefits of sustainable development. The Netherlands has a broad set of policies aimed at contributing to the empowerment and participation of disadvantaged groups, such as policies encouraging women’s labour and social participation, ensuring safety of women and lesbian, gay, bisexual and transgender persons, and promoting gender equality in education.

Raising awareness, creating ownership
The government established a website (www.sdgnederland.nl) to inform the population about the SDGs, initiatives already underway and ways in which people can contribute to achieving the SDGs.

National priorities focus on areas where the Netherlands is underperforming (noted above). The SDG network of focal points with representatives from each ministry and the Association of Netherlands Municipalities is responsible for localising the 2030 Agenda. The report refers to the roles of provincial, municipal and water authorities in SDG implementation. In addition, the Association of Netherlands Municipalities launched the Municipalities4GlobalGoals campaign to promote awareness of the SDGs among municipalities and help them contribute to the goals. The report highlights specific initiatives for several municipalities.

Stakeholder engagement
The report does not mention the involvement of non-state actors in identifying national priorities or preparing the VNR report. However, a civil society report states that non-state actors were engaged in the VNR process through involvement in the first annual national SDG report provided to parliament. Civil society organisations contributed to sections in the report on their activities, alongside the private sector, research institutes, local and regional governments, and youth organisations. This report to parliament was used as a source for the VNR report, in which Partos (a platform for Dutch civil society organisations working in international development) ensured that the positions of civil society organisations were taken into account.

Implementing the 2030 Agenda
The report notes the ongoing challenges of ensuring broad involvement and collaboration between different sectors, further aligning the SDGs with existing policies and ensuring policy coherence for sustainable development.

The Netherlands notes efforts to support partner countries including promoting domestic resource mobilisation and innovative financing mechanisms, as well as building expertise to forge partnerships with the private sector to contribute to achieving the SDGs. Moreover, by combining foreign trade and development cooperation, the Netherlands sees itself as investing in a strong global economy and a safer, inclusive and more stable world, where extreme poverty will be eradicated and inequality reduced. Making global value chains sustainable is another part of the aid and trade agenda. The country’s official development assistance has remained above or close to the international target of 0.7% of gross national income for a number of years.

Partnership to realise the SDGs
In support of the SDG agenda, over 100 organisations signed up to the Netherlands’ SDG Charter, committing to form partnerships to contribute to the SDGs. The report provides a detailed description of how civil society, the private sector, academia and other stakeholders are supporting the SDGs.

Measurement and monitoring
According to the government, data are currently available for 37% of the SDG indicators. The national statistical office aims to support 50% of indicators with data in 2018.

The Netherlands issued its first annual national SDG report in May 2017, which included an overview of existing policies and activities by national and local governments, the private sector including the financial sector, civil society organisations, knowledge institutions and youth organisations. Members of parliament debated the report on 2017’s Accountability Day. According to a civil society report, the Committee for Foreign Trade and Development Cooperation examines the annual SDG report provided to parliament.
Nigeria – Green

In 2017, Nigeria submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
According to the report, the Medium-Term Plan (2017-2020) is consistent with the aspirations of the 2030 Agenda for Sustainable Development and the Sustainable Development Goals (SDGs). The plan provides a framework for harmonisation and coordination of federal policy initiatives aimed at economic recovery and the achievement of the SDGs, as well as initiatives at the sub-national level. The government prepared the SDGs Transitioning Strategy and Action Plan, the Millennium Development Goals End-point Report 2015 and national SDG indicator baselines.

**Leadership, governance and institutions**
Within the Presidency of the Federal Republic of Nigeria, the president established the Office of the Senior Special Assistant to the President on the SDGs. An inter-ministerial committee was established to ensure cohesion and coordination and a Presidential Council on the SDGs will be established to provide high-level political and policy guidance and leadership. The CSO (civil society organisations) Advisory Group on SDGs liaises with the Office of the Senior Special Assistant to the President on the SDGs. The office has a number of objectives with respect to facilitating civil society engagement on the SDGs.

**Baseline or gap analysis**
The government has begun a SDGs needs assessment and policy analysis to establish baseline data and collect information for public investments across sectors and regions. The government also carried out a SDG data-mapping exercise to assess data availability.

**Integration and policy coherence**
The report includes a detailed examination of a limited set of SDGs with a relatively greater focus on the social dimension of sustainable development: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water, SDG 16 on peace, justice and strong institutions and SDG 17 on partnerships for the goals.

**Leave no one behind**
The report identifies the poor, women, the elderly, people with disabilities and internally displaced people as those being left
behind. To leave no one behind, Nigeria identified poor and vulnerable households through the establishment of a National Social Register. The government is providing a monthly conditional cash transfer of 5,000 naira to identified households as part of a national social safety net programme. The medium-term plan includes objectives to meet the commitment to leave no one behind, namely enhancing the social safety net and addressing region-specific exclusion challenges. An overview of programmes to ensure no one is left behind is available in the report.

**Raising awareness, creating ownership**
According to the report, the Office of the Senior Special Assistant to the President on the SDGs undertook numerous publicity and advocacy programmes to create and enhance awareness about the SDGs in partnership with others. Media briefings were coupled with publications in newspapers and electronic media as well as on social media platforms.

Nigeria’s national priorities include restoring growth, investing in people through social inclusion, creating jobs and improving human capital, building a globally competitive economy through investment infrastructure and improving the business environment, building strong governance institutions and driving performance and results through vigorous delivery. The report outlines national SDG targets for 2020 and 2030.

In terms of localising the SDGs, all 36 state governments, along with the Federal Capital Territory, have replicated the same organisational and institutional structures for SDG implementation as those at the national level. SDGs Offices have been created within state and local governments following success stories using this approach during the Millennium Development Goal period. The federal government is using the Conditional Grants Scheme to incentivise state and local governments to respectively set aside and utilise 50% and 20% of the costs of select SDGs-related projects in their annual budgets.

**Stakeholder engagement**
According to the report, non-state actors were engaged in identifying national priorities and preparing the VNR report. The report provides significant details on consultations for the VNR process and the government sees the report as a joint statement by multiple national stakeholders.

A civil society report was prepared in response to global civil society platform Action for Sustainable Development’s civil society questionnaire on SDG implementation and the VNR process. The VNR report also includes a civil society validation statement as an annex.

**BEST PRACTICE SPOTLIGHT**
A Core Working Group was established to lead on the VNR process, with members from relevant government institutions, development partners, civil society organisations, the private sector, and a consultant assisting in drafting the VNR report.

**Implementing the 2030 Agenda**
Key lessons from SDG implementation include the importance of technology-based, open and transparent progress tracking and reporting systems, innovative and adaptive practices and programme delivery mechanisms, domestic resource mobilisation and new sources of financing, assessing data availability and ensuring that baseline data are available. Major challenges include over-reliance on the oil and gas sector, the infrastructure deficit and technology gaps, economic recession, weak government institutions, and weak data production and management systems across the three levels of government. A huge financing gap for full SDG implementation is also anticipated. The government plans to estimate the cost of SDG-related programmes, projects and activities.

**Partnership to realise the SDGs**
Although the CSO Advisory Group on SDGs endorsed the report, it also noted that Nigeria needs to be more committed to strengthening ownership and deepening awareness of the SDGs with more engagement of civil society and the private sector. The report outlines activities by parliament, civil society, the private sector and development partners to support SDG implementation.

**Measurement and reporting**
The report contains the results of the SDG data-mapping exercise – baseline data are available for 120 indicators. The Office of the Senior Special Assistant to the President on the SDGs aligned the national statistical system with the SDGs by collaborating with partners. Priority was given to administrative data through support to various government institutions to improve routine data collection.

The report notes that the government is progressing towards the establishment of a Presidential Committee on the Assessment and Monitoring of the SDGs to serve as the top national monitoring, review and performance accountability body for the SDGs. The committee will formulate a framework for performance tracking, reporting and accountability.
In 2017, Panama submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The government adopted the Sustainable Development Goals (SDGs) as a guideline for leading its national development efforts. To that end, it advanced a process of national ownership and strengthened links with citizens and civil society organisations. The national strategic plan Panamá 2030 aligns the SDGs, Strategic Government Plan 2015-2019 and priorities defined in the National Agreement for Development. As a consequence, regulatory and institutional changes were introduced, among them the implementation of an investment plan focused on the sectors of greatest need and the creation of a permanent SDG progress monitoring system.

The principles of universality, human rights and leave no one behind are considered in the VNR report.

**BEST PRACTICE SPOTLIGHT**
In June 2017, Panama released its first version of the Multidimensional Poverty Index. The government now not only has better knowledge about the number of people living in income poverty in the country, but has also generated useful information that allows it to improve the management and integration of social policies, which will in turn facilitate alignment between different government institutions and between the government and non-state actors.

**Leadership, governance and institutions**
The Inter-institutional and Civil Society Commission for the Support and Follow-up of the SDGs was created in 2015 and has been operational since 2016. Its main bodies are the Superior Directorate and Technical Committee. The first is composed of the minister of Social Affairs Office, the executive secretary of the Office of the
Secretary for Presidential Goals and the president of the National Consultations for Development. The second gathers the Technical Secretariat of the Social Cabinet, a high-level delegate of the Office of the Secretary for Presidential Goals and the executive secretary of the National Consultations for Development. Established in 2008, the National Consultations for Development brings together representatives of the private sector, workers, non-governmental organisations, churches, academic institutions, indigenous peoples, political parties and the government.

**Baseline or gap analysis**

According to the report, Panama’s inventory of SDG indicators is scheduled to be finalised in the second half of 2017. It will include the definitions of baselines, national objectives, measurement methodologies and the first draft of data management protocols.

**Integration and policy coherence**

The report examines the SDGs covered by the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world,” namely SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 17 on partnerships for the goals.

Panama’s VNR gives equal consideration to the economic, social and environmental dimensions of sustainable development. Nevertheless, the analysis of goals pays hardly any attention to possible interactions between those dimensions, even when the integration of the three pillars of sustainable development is pointed-out as part of national development policies and SDGs alignment process.

Without referring to policy coherence for sustainable development, the report indicates that the government promotes a national cooperation plan called Panamá Coopera 2030, which is linked to the Strategic Government Plan 2015-2019 and the SDGs. In the same line, the report mentions the Paris Agreement on climate change as a tool to tackle climate change and promote development and the Addis Ababa Action Agenda as a means of implementation.

**Leave no one behind**

The principle of leave no one behind is not mentioned in the report. Several references to inequality are made, but concrete efforts to reduce inequalities are not noted.

**Raising awareness, creating ownership**

The report does not include references to efforts to raise awareness of the SDGs by the government. National priorities for the SDGs have not yet been defined. The government announced that a process aimed to determine national baselines as well as intermediate and final targets will soon be launched.

**Stakeholder engagement**

The report does not discuss how non-state actors will be involved in defining national priorities for the SDGs beyond being engaged by government institutions. Regarding non-state actors’ engagement in the drafting of the VNR report, interested groups were met and interviews with relevant socio-political actors were conducted. However, meeting participants and interviewees are not clearly identified.

**Implementing the 2030 Agenda**

The report notes two lessons learned: public policy in Panama, rather than facing budgetary challenges, seems to face problems in terms of its adequacy and relevance for offering effective services; and universal public policies’ capacities to work under different socio-cultural realities are limited.

Some challenges are also highlighted, such as: building a monitoring and evaluation mechanism for public policy; moving towards result-oriented planning, managing and investing; guiding the public policy cycle towards results; designing integral and aligned policies that can cover different dimensions of well-being; and considering social interventions’ cultural relevance.

Although technology, capacity development and international public finance are considered as means of implementation, only the latter is examined in detail.

**Partnership to realise the SDGs**

Even though the key roles of civil society and the private sector are mentioned several times, the report lacks specific tasks and ways in which they can participate in SDG implementation. Neither academia nor parliamentarians are mentioned as stakeholders in the implementation of the 2030 Agenda for Sustainable Development implementation.

**Measurement and reporting**

According to the report, data for monitoring and follow-up of SDG implementation at the national level are available for 75 of the global indicators (31%). There are no references to data disaggregation or efforts to improve data availability.

There is no mention of how the government will continue reporting in the future.
Peru - Green

In 2017, Peru submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

At the time of adopting the 2030 Agenda for Sustainable Development, the government had the Bicentennial Plan: Peru to 2021, which was adopted in 2011 and is in force until 2021. After the adoption of the 2030 Agenda, the government decided to align the plan with the Sustainable Development Goals (SDGs) and extend its validity until 2030. The alignment process began in 2017.

According to the VNR report, both SDG implementation and the alignment of the Bicentennial Plan with the SDGs have taken into account the principles of human rights and leave no one behind and even made references to the principle of common but differentiated responsibilities. However, there are no references to the universality of the 2030 Agenda in the report.

**Leadership, governance and institutions**

The Presidency of the Council of Ministers is responsible for promoting and coordinating national policies at the national level, but the main responsibility for implementing and following up the SDGs is the National Centre for Strategic Planning. The centre is the head institution of the Peru’s National Strategic Planning System, which also includes national and sub-national institutions and the Forum of the National Accord. that involves government officials, political parties with representation in parliament and civil society organisations. The institutional framework is completed by the Government Compliance and Sector Innovation Office attached to the Presidency of the Council of Ministers, the national statistical office and a Roundtable for Consultation on the Fight against Poverty.

Civil society organisations, experts, academics and representatives of political parties participate in the implementation of the 2030 Agenda. The government also works with civil and business associations representing the private sector.

**Baseline or gap analysis**

According to the report, the national statistical office presented a technical document showing Peru’s progress on the global SDG indicators, the definition of national baselines, and data availability for each indicator.
Integration and policy coherence

The report does not analyse specific SDGs, but rather provides a general analysis of the SDGs based on critical areas for sustainable development: people, planet, prosperity, peace and alliances. It addresses the economic, social and environmental dimensions of sustainable development in a general but balanced way. It only mentions policy coherence once, pointing out the Organisation for Economic Co-operation and Development’s investment policy framework as a tool to improve policy coherence at the international level.

Leave no one behind

The report does not address the principle of leave no one behind in a systematic way. Nevertheless, Afro-descendants, indigenous Amazonian peoples, high Andean women, children, people with disabilities, people living with HIV/AIDS, youth and domestic workers, among others, are identified as vulnerable groups. The government seeks to address domestic inequalities in an inclusive way by coordinating efforts of the national and regional governments, public and private universities, research centres and regional consultation groups.

The government also adopted the 2017-2021 United Nations Development Assistance Framework, which is guided by three cross-cutting axes -namely interculturality, gender and human rights; and is aimed to reach vulnerable groups in the country, explicitly spelling out the leave no one behind principle.

Raising awareness, creating ownership

In order to raise awareness and increase ownership of the SDGs, the government invited civil society organisations, the private sector and local governments to develop a social dialogue in which perspectives on national development paths were exchanged.

At the same time, a concerted follow-up on the SDGs through the Roundtable for Consultation on the Fight against Poverty was carried out, which took into account the national, regional, provincial and district levels.

National SDG priorities have not yet been established.

Stakeholder engagement

To contribute to the drafting of the VNR report, the government held consultation workshops with non-state actors. Regarding the implementation of the 2030 Agenda, non-state actors participate in the ongoing definition of national priorities through their representatives in government institutions, consultation spaces and seminars.

Implementing the 2030 Agenda

There are no references to lessons learned in the report.

Some challenges are identified, such as updating the Bicentennial Plan, ensuring disaster risk management processes are in government policies and plans, coordinating technical teams of different institutions to define or improve common indicators and procedures, and improving the quality and coverage of administrative records.

International technical cooperation, which is identified as a tool to support the country’s development, is the only means of implementation addressed in the report. Some general references to international public finance and trade as support for development can be found in an annex.

Partnership to realise the SDGs

In order to mobilise and engage the population to follow up and work towards SDG implementation, civil society organisations, academia, the private sector and local governments have created networks intended to broaden, democratise and enhance the debate on the SDGs and means of implementation in Peru.

Measurement and reporting

According to the report, the government is still evaluating the adequacy of its databases to monitor progress on the SDGs. As of April 2017, 110 of the global indicators (45%) had available data and national baselines. The report highlights that the government is better placed on indicators around “people” (47 of 77 indicators defined), than “planet” (only 12 of 55 indicators defined). The indicators are detailed in the report’s statistical annex. The government will produce annual follow-up reports that cover lessons learned, information about indicators and actions undertaken by stakeholders.

In the same way, the National Statistics and Information Institute is building a situational matrix of SDG indicators, including references to the sectors and institutions that generate relevant information, and a set of indicators with local coverage.
In 2017, Portugal submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The Council of Ministers adopted the first intra-governmental guidelines on the 2030 Agenda for Sustainable Development in 2016. Portugal’s Sustainable Development Goal (SDG) priorities are embodied in the National Reform Programme and streamlined into national strategies, plans and policies. The country recognises the universal, human rights-based nature of the 2030 Agenda and the importance of leaving no one behind.

**Leadership, governance and institutions**
The Ministry of Foreign Affairs and Ministry of Planning and Infrastructure are responsible for overall coordination of SDG implementation. Respectively, their roles are played out through two commissions, one responsible for inter-ministerial coordination on foreign policy and development cooperation and the other for domestic and international components of the 2030 Agenda. A network of focal points at different government institutions has been established to enable better coordination and exchange of information in a consistent and integrated manner, which contribute to monitoring progress and provision of regular updates.

**Baseline or gap analysis**
According to the report, Portugal’s baseline analysis of the implementation of the 2030 Agenda began with the collection of data and information on all 17 SDGs, after which national policies contributing to their implementation were mapped. The report identifies gaps in the goal-by-goal analysis such as disparities in education outcomes and the need to increase renewable energy.

**Integration and policy coherence**
All 17 SDGs are examined in detail in the report, though trend data are not covered. The report gives equal attention to the economic, social and environmental dimensions of sustainable development and makes reference to applicable linkages between goals.

The report refers to policy coherence for development in line with the SDGs, noting that Portugal has already achieved relevant legal and institutional milestones and granted the necessary political support involving both government and civil society. A National Plan
for Policy Coherence for Development, aligned with national SDG priorities, will intensify joint work between ministries, parliament and representation in other countries.

Leave no one behind
The report identifies senior citizens, people in extreme poverty, people with disabilities, low-income workers and Roma communities as at risk of being left behind. Women and refugees are also mentioned with respect to education outcomes. Portugal prioritises the fight against poverty and social exclusion among vulnerable groups, with a particular focus on child poverty through support provided to families with children and ensuring access to all levels of education. The report notes specific strategies that address the needs of different vulnerable groups such as people with disabilities and homeless people. A significant number of initiatives are highlighted under SDG 10 on reduced inequalities, including combating social, economic, political and cultural inequalities.

Raising awareness, creating ownership
The report does not mention efforts to raise awareness of the SDGs. National priorities, however, have been selected: SDG 4 on quality education, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 10 on reduced inequalities, SDG 13 on climate action and SDG 14 on life below water.

Local authorities play a significant role in SDG implementation within their territories through local-level initiatives. In line with the 2030 Agenda, the 2020 Sustainable Cities Strategy aims to advance sustainable urban planning and development and take action to strengthen territorial development, including economic, social, environmental, cultural and governance dimensions.

Stakeholder engagement
According to the report, a public consultation on the implementation of the 2030 Agenda at the national and local levels took place in 2016. It was led by a group of non-governmental organisations with support from the Institute for Cooperation and Language and the United Nations Regional Information Centre for Western Europe. The process included online and offline opportunities for engagement. The main recommendations drawn from the consultation were presented during a seminar in parliament in 2017, thereby contributing to the planning of and debates on implementation of the 2030 Agenda in the country. Non-state actors were consulted during the preparation of the VNR report.

Implementing the 2030 Agenda
The report highlights efforts to improve technology transfer to partner countries and contributions through official development assistance. In 2016, Portugal’s official development assistance amounted to 0.17% of gross national income. Least developed countries were the main beneficiaries (53.2%), followed by lower-middle-income countries (30%). Portugal focuses on intensifying trilateral cooperation as a way to promote the pooling of resources, knowledge and the sharing of experiences.

Partnership to realise the SDGs
The government indicates that the empowerment of civil society organisations and collaboration with them are priorities. Several partnerships between civil society organisations and partner countries, other European Union countries, and government institutions, foundations, universities, municipalities and the private sector have been encouraged and supported. The United Nations Global Compact Network Portugal coordinates the SDG Alliance Portugal, a multi-stakeholder platform that informs, implements, monitors, evaluates and raises awareness about the contributions of civil society organisations and the private sector to the SDGs at the national level.

Measurement and reporting
Official statistics are not available for all indicators. According to the report, statistical information for the majority of global SDG indicators is available (with information being identical, similar or partial). A quarter of the indicators are out of the national scope (like indicators to measure the specific circumstances of developing countries) and the remaining indicators do not have statistics available or are under consideration.

The national statistical office has made available on its portal (www.ine.pt) a thematic file on “Sustainable Development Goals” that provides an overview of SDG indicators. No further information on SDG reporting is presented in the report.
Qatar - Yellow

In 2017, Qatar submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
According to the report, the Sustainable Development Goals (SDGs) are part of the second National Development Strategy for the 2017–22 period. Qatar adopted sustainable development as a strategic choice in Qatar National Vision 2030. The Ministry of Development Planning and Statistics has incorporated the 2030 Agenda for Sustainable Development (the 17 SDGs and 169 targets) into the work of national task teams and sector projects.

**Leadership, governance and institutions**
The report highlights the creation of several mechanisms to support SDG implementation. A supervisory committee representing all ministries, an advisory committee representing non-governmental organisations and the private sector, and eight national task teams were created to develop sector strategies representing ministries, other government institutions, the private sector, civil society organisations and others. Another team was created to develop the performance management system for the National Development Strategy through regular monitoring and tracking with national stakeholders.

**Baseline or gap analysis**
The report does not include baseline or gap analysis.

**Integration and policy coherence**
The report includes a detailed review of a limited set of SDGs: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 5 on gender equality, SDG 6 on clean water and sanitation, SDG 7 on affordable and clean energy, SDG 8 on decent work and economic growth, SDG 9 on industry, innovation and infrastructure, SDG 10 on reduced inequalities and SDG 17 on partnerships for the goals. It has a limited focus on environmental dimensions of sustainable development and does not mention linkages between economic, social and environmental dimensions in the goal-by-goal analysis. It does not refer to policy coherence for development, but outlines Qatar’s foreign policy contributions to the SDGs. It does not mention the Paris Agreement on climate change or Addis Ababa Action Agenda.
Leave no one behind
The report identifies people with disabilities and women as at risk of being left behind. The government highlights mandatory hiring of people with disabilities (2% of total labour) as one initiative to leave no one behind.

Raising awareness, creating ownership
The report does not mention awareness-raising activities. National priorities noted include: social protection, family cohesion and women’s empowerment; economic infrastructure; a comprehensive health-care system; cultural enrichment and sports excellence; quality education and training; a qualified and committed labour force; natural resources; infrastructure; global partnerships for development; a sustainable environment; security and public safety; and institutional development and modernisation. National indicators have been selected and are accessible through a key performance indicator dashboard that contains the most important indicators related to sustainable development according to the government.

Stakeholder engagement
According to the report, non-state actors were engaged in identifying priorities through the national task teams. Sector strategies were prepared to serve as inputs for planning the second National Development Strategy. The extent to which non-state actors were engaged in the preparation of the VNR report is unclear.

Implementing the 2030 Agenda
The report highlights lessons learned during SDG implementation with respect to integrating the goals into national plans, involving non-state actors, working to accelerate preparations and establishing ownership of implementation. A key challenge is avoiding duplication of efforts. To address it, the government promoted participation by all stakeholders in sector project planning and design and ownership was determined against sound and consensual principles, with projects incorporated into annual action plans. Other challenges include adequate human resources, data availability, effective communication in all sectors, non-state actor involvement in implementation, and establishment of an enabling legal framework.

The report highlights efforts to build science and technology infrastructure and invest in human capital through several national and international universities, allocating a research and development fund and committing around 2.8% of annual government spending to these purposes.

Qatar considers assisting the least developed countries to achieve the SDGs to be a major objective of several initiatives. Its official development assistance in 2015 amounted to 0.78% of gross domestic product.

Partnership to realise the SDGs
While the report mentions participation in the identification of national priorities and governance by non-state actors and a commitment by the government to further engage them in implementation efforts, it does not mention specific activities and partnerships.

Measurement and reporting
The report does not provide an overview of data gaps, though it notes that gaps in health care data exist. The Ministry of Development Planning and Statistics has undertaken efforts to improve data availability in collaboration with the United Nations Statistics Division and regional and Arab organisations. These efforts include a roadmap outlining the SDG indicators to be used to monitor implementation progress and inform reports. The roadmap also outlines efforts to strengthen the national statistical system.

By the end of 2022, Qatar will review the goals and targets that have been achieved in order to incorporate those that remain unattained into the third National Development Strategy for the 2023–28 period. In line with international best practices, a central monitoring mechanism in the form of a performance measurement dashboard will be developed, regularly updated and shared with officials and decision makers. The focus will be on the top five to eight priorities under the second National Development Strategy with a limited number of related key performance indicators (a maximum of 15 to 20). Indicators will be monitored on a monthly basis where possible and quarterly basis.
In 2017, Sint Maarten submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development as part of the submission by the Kingdom of the Netherlands, of which it is a constituent country.

**Incorporating the SDGs**
The government is currently integrating the Sustainable Development Goals (SDGs) into its National Development Plan, which will focus on the national priorities of human development, good governance, environmental protection and the preservation of cultural heritage. According to the report, the government will launch initiatives to mainstream the SDGs as part of the plan’s implementation strategy and organisational governance.

**Leadership, governance and institutions**
A “Think and Act” commission, which represents the three ministries that are most involved in SDG implementation, has been established. The report does not outline engagement by non-state actors in governance and institutional SDG implementation mechanisms.

**Baseline or gap analysis**
An initial assessment linked the government’s policy programmes and results to the SDGs. In addition, an SDG report is being drawn up by the Department of Statistics to help guide future implementation. The SDG report will highlight areas where implementation is lagging, thus clarifying where political decisions need to be made. According to the VNR report, the SDG report will also help gradually enhance data for SDG indicators.

More progress is needed in further reducing poverty among vulnerable groups, enhancing environmental protection of water and land, and improving the effectiveness and accountability of government institutions.

**Integration and policy coherence**
The report provides a summary examination of all SDGs except SDG 2 on no hunger. Equal attention is given to economic, social and
environmental dimensions overall, though few references are made to the linkages between dimensions in the goal-by-goal analysis. The report includes an assessment of domestic and foreign policies on the realisation of the SDGs globally, though very limited information is provided. Climate change policies and the Paris Agreement on climate change are explicitly linked to the SDGs.

Leave no one behind
According to the report, Sint Maarten embraces its responsibility to promote sustainable and inclusive development that leaves no one behind. Delivering on this responsibility requires early and effective actions to ensure that everyone benefits from economic growth. Men and women, rich and poor, straight and gay, young and old must all be involved in creating and sharing the benefits of sustainable development. The government will concentrate on using fiscal, wage and social protection policies and reforms to ensure sustained income growth for the bottom 40% of the population at a rate higher than the national average. Policies are being adjusted to empower groups such as women and girls and promote social, economic and political inclusion. An action plan to implement the Integrated Youth Policy aims to reduce youth unemployment and promote young people’s health. The government supports youth organisations that are working to reduce high-risk behaviour among young people.

Raising awareness, creating ownership
The report notes that the government developed a communication plan to inform the population about the SDGs, which focuses on reaching young people by including the SDGs in school curricula. It also introduced the StMaartenInfo database to compile development data as well as a user portal for policy development initiatives. In its initial three-year phase, the “Think and Act” commission will conduct an information and communication campaign using a bottom-up approach to make the SDGs more widely known and obtain inputs from groups inside and outside government. While it has identified national priorities, the government has not developed national targets and indicators.

Stakeholder engagement
Efforts to engage non-state actors in the identification of national priorities and preparation of the VNR report are not outlined in the report.

Implementing the 2030 Agenda
The report identifies the provision of public goods and services and the government’s ability to deal with a changing natural environment as key challenges for governance. Although the SDGs are increasingly well known within government, the population is not yet familiar with them. Collaboration between different sectors is an ongoing challenge that sometimes requires external support and exchanges of lessons learned between countries. The government notes that SDG implementation must be better aligned with existing policies.

There is no Sint Maarten-specific information for most sections on means of implementation in the report. However, to the extent that Sint Maarten contributes to the Kingdom of the Netherlands’ international development efforts, the combination of foreign trade and development cooperation is highlighted as a positive contribution.

Partnership to realise the SDGs
Sint Maarten acknowledges that it is no longer enough to act only at the national level. It has therefore taken on responsibility as a Regional Authorising Officer for the European Union-funded 11th European Development Fund Regional Programme, in which 12 overseas countries and territories take joint action to enhance marine biodiversity and promote sustainable energy. This partnership is expected to achieve more than individual countries could by themselves. The programme ties in with multiple SDGs.

The report does not outline the efforts of parliamentarians, civil society organisations or the private sector.

Measurement and reporting
The report makes reference to annual reporting but does not provide specific details.
Progressing national SDGs implementation: Annex 3. Country Profiles

Slovenia - Green

In 2017, Slovenia submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
According to the report, Slovenia used the preparation of the VNR report to contribute to the Slovenian Development Strategy 2030, a new national development strategy that will align all Sustainable Development Goals (SDGs) with national priorities and targets. Also, the 2030 Agenda for Sustainable Development is closely aligned with the Vision of Slovenia 2050. The country recognises the universality of the SDGs and the need to leave no one behind.

Leadership, governance and institutions
The Permanent Inter-ministerial Working Group on Development Planning was established by the government at the beginning of 2017 as a coordination mechanism to promote policy coherence. It is coordinated by the Government Office for Development and European Cohesion Policy and composed of two representatives from each ministry who work as focal points for development policies and the 2030 Agenda. The report does not outline how non-state actors are engaged in governance or institutional mechanisms related to SDG implementation.

Baseline or gap analysis
A preliminary gap analysis of the government’s policies and existing measurements, including the 17 SDGs and 169 targets, was initiated in 2016 and used to inform the mapping of the objectives of the new national development strategy. According to the VNR report, all ministries have been asked to analyse their existing strategies and activities in light of the 2030 Agenda.

In addition, a comprehensive analysis for the VNR report identified where Slovenia stands, which indicators are already measured and what actions the country is taking towards achieving the SDGs. Gaps identified in the report include poor nutritional status, tobacco use, mental health, energy efficiency, productivity, sustainable mobility and use of public passenger transport, establishing a circular economy, corruption, and judicial efficiency.

Integration and policy coherence
The report provides a detailed examination of all SDGs, with equal attention to economic, social and environmental dimensions, and refers to applicable linkages between dimensions in analysis of specific goals.
The report notes that policy coherence for sustainable development will be checked at the policy-making stage. Slovenia’s next step is to establish an integrated and coherent policy framework for sustainable development to ensure synergies among sectoral, domestic and foreign policies.

Leave no one behind
The report identifies children and adolescents, the elderly, women who experience domestic violence, people with mental health problems, homeless people, at-risk users of illicit drugs, people with various forms of functional disability, Roma, and immigrants as at risk of being left behind. It highlights preventive, curative and so-called maintenance social security programmes for the most vulnerable groups with high risk of social exclusion. These programmes, which are carried out by non-governmental organisations, complement the social security services and measures carried out by the government. Special attention is given to people with mental health problems who are part of vulnerable groups.

Raising awareness, creating ownership
According to the report, Slovenia embraced the VNR process as a significant and helpful way to raise awareness among stakeholders and internalise ownership by ministries. By the end of 2017, analysis of progress on the SDGs against existing policies will be added to national targets and action plans that will serve as guidelines towards achieving the SDGs. The country prioritises high quality of life reflected in good opportunities for work, education and creativity, living a decent, safe and active life in a healthy and clean environment, and inclusion in democratic decision making and the co-management of society. The new national development strategy will seek to balance five strategic directions: a resilient, inclusive, safe and responsible society, a highly productive economy that provides value for all, learning for and through life as a value and driver of development, efficient and competent governance driven by cooperation, and a well-preserved natural environment.

Stakeholder engagement
According to the VNR report, although its preparation was government-led and -driven, the report was also informed by contributions from representatives of civil society, the private sector and youth. Representatives of these groups were also included in the process of drafting the Vision of Slovenia 2050, upon which the new national development strategy is based. The report mentions several consultation events.

Implementing the 2030 Agenda
The report highlights that the most important lesson learned during the VNR process was the need for an integrated approach. One of the economic, social and environmental dimensions of sustainable development should not prevail over the other two and consideration of inter-linkages between economic, social and environmental policy areas, as well as ensuring consistency with international engagements, is of great importance for successful SDG implementation.

Regarding means of implementation, Slovenia’s action plan includes the gradual increase of official development assistance as a share of gross national income with a view to meet its commitments. Its official development assistance in 2016 was estimated to be US$80 million, which represents 0.18% of gross national income.

Partnership to realise the SDGs
The report does not provide details about the contributions of most stakeholder groups to the SDGs. It does, however, point to the creation of a dialogue mechanism to engage non-state actors going forward and a systematic assessment of areas where partnerships can be established. In preparing the report, gaps in the area of partnership were identified and, above all, the need for a more comprehensive approach to dialogue with civil society, which would promote sustainable development at the national level. Aspects of international development cooperation were also highlighted. It includes a special chapter on Slovenian youth and the 2030 Agenda that was prepared by representatives of the National Youth Council of Slovenia. The council conducted a survey of youth priorities for the SDGs, the results of which are presented in the report.

Measurement and monitoring
According to the government, Slovenia will strive to increase the amount of available data for SDG indicators. Future efforts will focus primarily on the establishment of a mechanism for the systematic collection of data by the national statistical office and all government institutions that have relevant databases.

Slovenia plans to report on the SDGs as a regular part of annual reporting on the implementation of the new national development strategy. More detailed analysis in future VNR reports is also planned.
In 2017, Sweden submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

The government signalled its intention to design a national action plan for the implementation of the 2030 Agenda. A draft action plan was introduced in 2017. Parliament has taken note of and adopted several of the government’s communications and bills that have bearing on the 2030 Agenda for Sustainable Development, such as communications about the Policy for Global Development. A national government procurement strategy with seven directional goals that contribute to Sustainable Development Goal (SDG) implementation has been produced. Guidelines for the annual dialogue between government institutions include discussing the implementation of the 2030 Agenda as well as goals and targets that concern specific institutions. All ministries have produced action plans.

**Leadership, governance and institutions**

According to the report, the national cabinet is responsible for implementing the 2030 Agenda and each cabinet minister has an area of responsibility. The minister for public administration is responsible for coordinating and promoting implementation nationally. The minister for international development cooperation and climate leads the work on Sweden’s contributions to implementation internationally. Immediately under the ministers is a smaller consultation group for the 2030 Agenda comprising state secretaries from the Ministry of Finance, the Ministry for Foreign Affairs, the Ministry of the Environment and Energy and the Ministry of Enterprise and Innovation. An inter-ministerial working group for the 2030 Agenda, in which all ministries participate, exists.

In 2016, the government appointed a national delegation with a commission to support and stimulate the work on implementation of the 2030 Agenda both nationally and internationally. The delegation is responsible for dialogue on sustainable development with government institutions, municipalities and county councils, social partners, the private sector, civil society and the research community. Members of the delegation have broad experience and knowledge from different sectors.

**Baseline or gap analysis**

The report mentions the preparation of a comprehensive report on the basis of existing data and statistics to provide a preliminary
systematic assessment of Sweden’s progress on the SDGs. The national statistical office uses more than 120 indicators, of which around 100 have an exact, partial or approximate correspondence with the global indicators. Identified challenges include finding methods to quickly and effectively contribute to lowering greenhouse gas emissions and climate-resilient development, supporting sustainable oceans and marine resources, achieving sustainable consumption and production, reducing income disparities, increasing the disposable income of certain vulnerable groups, realising gender equality, and achieving equity in health and equal opportunities for lifelong learning.

Integration and policy coherence
The report provides a detailed examination of all 17 SDGs with equal attention to the economic, social and environmental dimensions of sustainable development, though few references are made to linkages in the goal-by-goal analysis. Sweden prioritises coherence for equitable and sustainable development – horizontally between policy areas and vertically from the global to the local level, and from goal formulation to implementation. The country plans to strengthen policy coherence.

Leave no one behind
People with disabilities, newly arrived immigrants, those born outside Europe and young people are identified as at risk of being left behind. Government institutions are required to work for all citizens to be able to participate, attain equality in society and counteract discrimination. One of the government’s objectives is to eliminate avoidable health inequalities within a generation. National strategies to ensure equal rights and opportunities have been produced for people with disabilities, LGBT persons, Roma, and people experiencing racism, related forms of hostility and hate crimes.

Raising awareness, creating ownership
The report mentions awareness raising as important but the government’s activities are not listed.

The draft action plan proposes the following national SDG priorities: an equitable and gender-equal society, sustainable cities, a circular economy of benefit to society, a stronger private sector with sustainable business models, sustainable and healthy food, and enhanced knowledge and innovation. National indicators for all 169 targets in the 2030 Agenda and an integrated follow-up system will be developed and adopted.

Some municipalities are in the first phase of linking the 2030 Agenda to their operations, while others have included the SDGs in their management systems and strategies. The report also includes specific examples of efforts by county councils.

Stakeholder engagement
Non-state actors are engaged in the identification of national priorities and the VNR process according to the report.

Implementing the 2030 Agenda
The report does not outline best practices, lessons learned and challenges. With respect to means of implementation, it notes that Sweden’s official development assistance has amounted to about 1% of gross national income annually since 2006. Sweden works for open and equitable global trade. The country also wants low- and middle-income countries to have greater influence in international economic and financial institutions in line with their growing role in the global economy.

Partnership to realise the SDGs
Many non-state actors are active in terms of efforts on the SDGs. Civil society is driving opinion and critically reviewing the actions of the government and other authorities to ensure that they are living up to the 2030 Agenda. The government has engaged representatives of the financial sector about that sector’s role in implementing the SDGs and Addis Ababa Action Agenda. The private sector is committed to the SDGs through, for example, the Swedish Leadership for Sustainable Development, a network working for good leadership in the field of sustainable development. In 2015, the government established the Scientific Council for Sustainable Development, which includes a panel of prominent researchers representing multidisciplinary and cross-sectoral approaches. The council supports dialogue between the government and research community. The report also highlights contributions from trade unions.

Measurement and reporting
Data availability for the global SDG indicators is unclear from the report.

The government notes that it has intensified its work to integrate the 2030 Agenda into institutions’ follow-up processes. In 2017, all ministries summarised and reported their implementation efforts. The government submits communications about the Policy for Global Development, which includes references to SDG implementation, to parliament every two years.
In 2017, Tajikistan submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The National Development Strategy for the period up to 2030 and the Mid-term Development Program of Tajikistan for 2016-2020 are the two key national policies that integrate the SDGs. The report notes that Tajikistan now faces the task of incorporating the Sustainable Development Goals (SDGs) into sectoral policies and localising the SDGs at the regional level. SDG implementation will be ensured through the implementation of three five-year medium-term development programmes.

**Baseline or gap analysis**
Tajikistan has assessed all of the SDGs except SDG 14 on life below water, noting that the goal is not important for the country since it does not have access to open water. In 2016, the Rapid Integrated Assessment of national-level strategies and sectoral programmes and plans was carried out to ensure that the SDGs were integrated. It found that about 64% of relevant SDG targets are reflected in the two key national policies. A broad review of 10 national strategies showed that 78% of relevant SDG targets are being mainstreamed.

**Leadership, governance and institutions**
The Ministry for Economic Development and Trade, which is acting as the secretariat of the National Development Council under the president, leads on SDG implementation, formation of technical working groups and assignment of government institutions to implementation tasks. Within the framework of coordination, the country plans to establish a platform for interaction among development partners that involves a larger number of stakeholders and enables timely decision making. The report does not mention inclusion of non-state actors in formal governance or institutional mechanisms.

**Integration and policy coherence**
The report provides a summary examination of a limited set of SDGs with equal attention to the economic, social and environmental dimensions of sustainable development and reference to the linkages between dimensions in the goal-by-goal analysis. Following an overview of progress on the Millennium Development Goals, the report examines SDG 2 on zero hunger, SDG 5 on gender equality, SDG 7 on affordable and clean energy, and SDG 9 on industry, innovation and infrastructure.
Leave no one behind
Tajikistan requires additional data to meet the commitment to leave no one behind. The report notes that women, children and the elderly, rural communities and people with disabilities are at risk of being left behind. It notes that Tajikistan should pay special attention to monitoring and evaluation of disaggregated data as well as SDG localisation issues in order to meet the needs of vulnerable groups. It outlines the need to empower women economically, politically and socially and mentions that attention should be paid to the elimination of regional discrepancies and multidimensional poverty to overcome inequality.

Raising awareness, creating ownership
The report notes the need to raise awareness of the SDGs through a targeted approach. It also identifies four strategic goals for the next 15 years, namely ensuring energy security and efficient use of electricity, moving out of the communication deadlock and transforming Tajikistan into a transit country, ensuring food security and access to quality nutrition, and expanding productive employment. The selection of national targets and indicators is identified as future work for the government in the report.

Stakeholder engagement
According to the VNR report, national consultations allowed Tajikistan to draw conclusions based on analysis of the implementation of the Millennium Development Goals, review the previous national development strategy and determine future priorities for long- and medium-term development. Based on the work done and inputs from stakeholders, Tajikistan has started working on a long-term national development strategy. The VNR report was prepared through a series of consultations at the national level, with the participation of representatives of the government, parliament, sectoral bodies, local authorities, development partners, civil society, academia, the private sector and the media.

Implementing the 2030 Agenda
Sectoral strategic, programme and budget priorities do not currently match new national strategies or Tajikistan’s international obligations for the SDGs. The report notes that this mismatch hampers practical implementation of national strategies, makes monitoring and evaluating outcomes difficult, and hinders effective coordination of donor assistance. Other challenges include coordination of actions, development of the monitoring and evaluation system with consideration of the SDGs, introduction and implementation of the SDGs at the local level, and financing SDG implementation. The report also notes challenges related to individual SDGs.

National strategies, as well as national and regional budgets, envision significant improvement of the investment climate for both foreign and domestic investors, which would increase budget capacities to meet social needs.

The government notes the need for capacity building to speed up accomplishments in social development through the SDGs and highlights the importance of funding from development partners. It expects development partners to increase funding through grants in light of the SDGs.

Partnership to realise the SDGs
The report mentions that participation of non-state actors in SDG implementation is planned but does not mention existing activities. It notes that ensuring stakeholder participation is critical, so that parliament, civil society and the private sector contribute alongside government institutions. The government hopes development partners will support the development of a monitoring and evaluation policy that serves as the basis for planning, implementation, monitoring and evaluation of development programmes funded by the government as well as initiatives funded by development partners.

To prepare the VNR report, a working group composed of experts from government institutions was created. United Nations agencies, development partners, civil society representatives, scientists and others contributed to discussions and provided thematic information.

Measurement and reporting
The status of data for SDG monitoring is unclear. The report notes that developing a single list of SDGs and associated indicators that will be priorities over the next five years, as well as monitoring them alongside progress on the two key national policies, is critical.
Thailand – Green

In 2017, Thailand submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
According to the report, the Sustainable Development Goals (SDGs) have been integrated into the 20-Year National Strategy Framework and Twelfth National Economic and Social Development Plan (2017-2021). As a result, the plans and budgets of all government institutions will be aligned with the SDGs. The report notes the universal nature of the 2030 Agenda for Sustainable Development and the importance of leaving no one behind.

Leadership, governance and institutions
The National Committee for Sustainable Development, chaired by the prime minister, is responsible for formulating policies and strategies on sustainable development at the national level, including the SDGs, and oversight of their implementation. It established three sub-committees to advance mobilisation of the SDGs, raise awareness, and compile data and statistics to support the implementation and monitoring of the 2030 Agenda. The Office of the National Economic and Social Development Board is the national focal point for the SDGs and serves as the secretariat of the National Committee for Sustainable Development. The committee has 37 members from government institutions, the private sector, academia and civil society.

Baseline or gap analysis
The National Committee for Sustainable Development examined gaps and discrepancies between national indicators and baselines and proposed global SDG indicators. As of March 2017, most SDGs and 180 indicators had been analysed, with 113 national-level indicators found to comply with the global indicators.

Integration and policy coherence
The report provides a detailed examination of all 17 SDGs with equal attention to economic, social and environmental dimensions and reference to applicable linkages between dimensions in the goal-by-goal analysis.

The report notes that a review of Thailand’s readiness to achieve the SDGs reveals the need to enhance policy coherence for sustainable development despite having some mechanisms in place to support policy coherence.
Leave no one behind

Thailand requires additional data to meet the commitment to leave no one behind. The report notes that under-privileged children, children with disabilities, children part of ethnic and other marginalised groups, the elderly, people with disabilities, and women are at risk of being left behind.

Civil society validity check

A civil society report states that there were no consultations on the VNR report but rather meetings on the SDGs more generally. In addition, the draft of the VNR report was not communicated and shared.

Stakeholder engagement

The report notes consultations on national priorities and the VNR process. Two civil society reports were prepared – one in response to the global civil society platform Action for Sustainable Development’s questionnaire on SDG implementation and the VNR process and the other looking specifically at SDG 1 on no poverty.

Implementing the 2030 Agenda

SDG implementation is mainly funded by the government’s annual budget. The government needs more resources to achieve the SDGs and aims to enhance the effectiveness of tax collection.

Partnership to realise the SDGs

The parliament established a sub-committee on monitoring the implementation of SDGs with a mandate to follow up and promote the role of the parliament in supporting SDG implementation. Civil society organisations organised their own SDG regional forums to present their views, concerns and priorities. Members of the United Nations Global Compact Network Thailand and other private entities are very active in mainstreaming the SDGs into business operations. Academia was instrumental in designing the methodology and processes for prioritising SDG targets in accordance with the national context as well as statistical methods, which ensure objectivity. The Ministry of Foreign Affairs supported youth in organising a youth forum on sustainable development to voice their opinions on SDG implementation.
Measurement and reporting

Although the report notes the need for disaggregated data, such as by age, sex and disability, data availability for SDG monitoring is unclear. Efforts are being made to improve data availability through improving inter-agency cooperation, developing datasets, using technology, building capacity and mobilising additional funding.

Monitoring and reporting the results of SDG implementation every six months is listed as a next step in the VNR report.
In 2017, Togo submitted its second voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**
The report highlights Togo’s commitment to the Sustainable Development Goals (SDGs) and ownership over the goals through its National Development Plan for the 2018–22 period. The plan integrates the goals based on their associated targets, 60 of which have been prioritised by the country. Certain sectoral policies or plans have been or are currently being updated to reflect the SDGs based on their associated targets.

**Leadership, governance and institutions**
Togo has an existing institutional mechanism for the coordination, monitoring and evaluation of development policies, namely the National Steering Committee on Development Policies, which is chaired by the prime minister. A unit was established at the Presidency of the Republic in charge of monitoring sustainable development and international agreements and determining the broad guidelines for matters relating to development. According to the report, through the National Steering Committee on Development Policies, the government presents an annual balance sheet on development progress to its partners, notably civil society, the private sector, and cooperation and development partners.

**Baseline or gap analysis**
The report does not refer to baseline or gap analysis.

**Integration and policy coherence**
The report provides a detailed examination of SDGs under the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world,” specifically SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water, and SDG 17 on partnerships for the goals. It gives equal attention to economic, social and environmental dimensions of sustainable development but makes limited references to the linkages between dimensions. Policy coherence for sustainable development is not mentioned.
Leave no one behind

The report does not mention the availability of data to meet the commitment to leave no one behind. However, it notes that young people, women, people with disabilities, people living with HIV, people living in rural areas, farmers and the elderly are at risk of being left behind. The Community Development Emergency Programme is the backbone of a number of inclusive projects and remains one of the key components of the National Development Plan that aims to leave no one behind. The programme’s objective is to intensify socio-collective and economic infrastructure in areas with little or no access to safe drinking water, energy, schools, health centres, rural feeder roads and markets, among other things. The needs to eradicate poverty, address inequality and achieve social inclusion in Togo are also priorities in the National Development Plan.

Raising awareness, creating ownership

According to the report, Togo carried out several awareness and outreach activities dedicated to the SDGs to ensure a shared vision at all levels. The activities included training and sensitisation workshops at the national, regional and local levels for the benefit of national and regional administration, parliament, civil society, the private sector, and technical and financial partners. In addition, awareness campaigns that specifically targeted Togolese youth were carried out.

The government used a SDG target prioritisation grid to adapt the SDGs. As a result, 60 SDG targets were adopted in the National Development Plan. The plan includes five strategic axes: improve the well-being of the people and enable them to fulfil their potential; improve the productivity and competitiveness of growth sectors; strengthen infrastructure that supports growth; ensure sustainable management of the territory, the environment and living conditions; and strengthen governance and consolidate peace.

The report does not identify specific measures related to localising the 2030 Agenda for Sustainable Development, but notes the importance of the country’s decentralisation process for SDG implementation and regional data collection efforts.

BEST PRACTICE SPOTLIGHT

Togo’s government undertook a stakeholder mapping process to analyse how it can engage different stakeholders to facilitate progress on the SDGs. This initiative identified stakeholders and determined the role that they can play in the development, implementation, monitoring and evaluation of development policies and strategies oriented towards the SDGs. This process also identified stakeholder expectations, notably in terms of development issues and challenges, and reflected on strategies and actions that will meet them.

Stakeholder engagement

The report refers to consultation processes with non-state actors on national priorities and the VNR process, as well as engagement through the National Steering Committee on Development Policies. However, when asked whether there has been regular policy dialogue with relevant ministries during the preparation of the VNR report and since the adoption of the 2030 Agenda, a local civil society organisation noted that this has not really been the case. A civil society report was prepared in response to the global civil society platform Action for Sustainable Development’s civil society questionnaire on SDG implementation and the VNR process.

Civil society validity check

A civil society report notes that while local governments are involved, their participation is very limited and selective, with only mayors and prefects participating largely through workshops organised occasionally at the regional level by the regional directorates of the Ministry of Planning and Development.

Implementing the 2030 Agenda

The report highlights the need for Togo to optimise its resource and partner mobilisation strategies for the realisation of its development objectives. The government has embarked on the implementation of reforms geared at mobilising both domestic and external resources for economic emergence. The report notes several challenges including inadequate financial, technical and human resources and the persistence of social-cultural constraints.
Partnership to realise the SDGs
Parliamentarians have participated in events on the SDGs. Civil society has been active in awareness raising and promoting ownership of the goals. A civil society report notes that the private sector’s commitment has not yet been defined because it lacks understanding of the SDGs.

Measurement and reporting
Data availability for SDG monitoring is not mentioned in the report. Nevertheless, the report notes that Togo aims to strengthen statistical production by operationalising the National Institute of Statistics, Economic and Demographic Studies.

A unit was established at the Presidency of the Republic to monitor sustainable development and international agreements.
In 2017, Uruguay submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

**Incorporating the SDGs**

Throughout 2016, Uruguay developed a social dialogue that brought together government, civil society organisations, academia, the private sector and international organisations, among others. The government decided to work on the implementation of the Sustainable Development Goals (SDGs) in a cross-cutting way at all levels of government to guide policies towards the full implementation of the 2030 Agenda for Sustainable Development. As a result, the SDGs are expected to be incorporated into the strategic planning of each government institution.

The VNR report does not mention universality or human rights as principles, but the link between the SDGs and human rights is reflected in Uruguay’s consideration of international agreements on human rights when analysing each of the SDGs considered in the report. Uruguay considers the leave no one behind principle to be of high relevance.

**Leadership, governance and institutions**

The Council of Ministers is the main political body responsible for the implementation of the 2030 Agenda. The Office of Planning and Budget monitors and articulates SDG promotion actions. The Uruguayan Agency for International Cooperation oversees matters related to international cooperation, while the national statistical office is in charge of the elaboration of national indicators.

Regarding regional-level involvement, several experiences are listed, such as the national statistical office’s participation in the Statistical Conference of the Americas, the country’s engagement in an ad hoc working group in charge of preparing a proposal regarding indicators for the regional follow-up to the Montevideo Consensus on Population and Development, and the country’s data being included in the Ibero-American Integrated Data System on South-South and Triangular Cooperation. The regional level is examined in the analysis of each SDG considered in the report.
Baseline or gap analysis
The report does not make relevant references to baseline or gap analysis.

Integration and policy coherence
The VNR report covers the 2017 High-level Political Forum theme “Eradicating poverty and promoting prosperity in a changing world” SDGs plus SDG 16 on peace, justice and strong institutions, on which the country carried out an implementation pilot experience. Each goal is analysed according to the following structure: presentation of the objective, normative framework and public policies, status of goals and indicators, and main advances and challenges.

The VNR dedicates equal attention to the economic, social and environmental dimensions of sustainable development. Nevertheless, limited references are made to linkages between economic, social and environmental dimensions in the analysis of each particular goal.

The report also establishes a clear link between the 2030 Agenda and Paris Agreement on climate change but does not mention the Addis Ababa Action Agenda. There are no references to policy coherence for sustainable development.

Leave no one behind
Data, targets or efforts to meet the commitment to leave no one behind are not articulated in the report. However, the following groups are mentioned throughout the analysis of the SDGs: women, people with disabilities, children, the elderly, people deprived of their liberty, Afro-descendants, and people and households living in poverty or highly vulnerable to poverty.

Raising awareness, creating ownership
Concerning the establishment of national SDG priorities, the report merely states that the end of work on the Millennium Development Goals and the launch of the 2030 Agenda offer an excellent opportunity to analyse the country’s current situation and set national objectives for the years to come.

Regarding awareness of the 2030 Agenda and ownership promotion, the key mechanism adopted by the government was the 2016 social dialogue, a series of open meetings established by the Presidency of the Republic of Uruguay to discuss perspectives on national development.

In the report, the analysis of each SDG includes references to sensitisation actions.

Stakeholder engagement
The preparations for the VNR report involved a consultation process with various government institutions, civil society organisations, the private sector, academia, and international organisations. The United Nations Development Programme supported the process.

Even though national SDG priorities are not yet set, multi-stakeholder dialogues for their determination are ongoing.

Implementing the 2030 Agenda
The report neither identifies lessons learned nor general challenges for SDG implementation, but refers to challenges faced by each SDG considered. It mentions technology as a MoI. The only references to best practices are in the analysis of SDGs, namely SDG 2 on zero hunger, SDG 3 on good health and well-being, and SDG 16 on peace, justice and strong institutions. There are no references to capacity development, international public finance or trade as means of implementation.

Partnership to realise the SDGs
The private sector, civil society organisations and academia participated through the 2016 social dialogue. The VNR report refers to specific alliances with each of them in the analysis of SDGs. It highlights the role of the United Nations Development Programme in backing the social dialogue and the support of the UN system in Uruguay in drafting the VNR report. It underlines that Uruguay was a pilot country in a United Nations Development Programme initiative on designing national sets of indicators for SDG 16 on peace, justice and strong institutions.

Measurement and reporting
An annex in the VNR report examines the availability of indicators and data for each of the 17 SDGs. It highlights that 44% of the 241 global indicators are available in the national statistical system, 32% have data that are not regularly collected and 25% do not have an established methodology for data collection. Indicators are available for SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 5 on gender equality, SDG 9 on industry, innovation and infrastructure, SDG 14 on life below water and SDG 16 on peace, justice and strong institutions. The report does not mention data disaggregation, efforts to improve data availability or how the government plans to report on the SDGs in the future.
Zimbabwe – Green

In 2017, Zimbabwe submitted its first voluntary national review (VNR) report to the United Nations High-level Political Forum on Sustainable Development.

Incorporating the SDGs
The Zimbabwe National Position Paper on Sustainable Development Goals (SDGs) was prepared in 2015. According to the VNR report, the SDGs have been mainstreamed and integrated into the Zimbabwe Agenda for Sustainable Socio-Economic Transformation for ease of implementation and to ensure synergies between the SDGs and the country’s economic plans.

Civil society validity check
A civil society report notes that the SDG realignment process was very government-centric.

Leadership, governance and institutions
Thematic clusters were established for mainstreaming and localising the SDGs. Clusters are supported by the SDG Secretariat, which consists of the Office of the President and Cabinet, Ministry of Macroeconomic Planning and Investment Promotion, United Nations Development Programme and the national statistical office. A steering committee, chaired by the chief secretary to the president and cabinet, was established to provide overall guidance and strategic leadership on SDG implementation. It includes representation by permanent secretaries of all ministries, heads of the United Nations agencies, cluster chairs and co-chairs, the private sector, civil society, parastatals and development partners. A technical committee was established to spearhead technical processes and provide technical backstopping. The National Association of Non-Governmental Organisations has come up with 10 thematic sectors covering the SDGs that are part of the government’s thematic clusters.

Baseline or gap analysis
According to the report, Zimbabwe mapped and selected 244 country-specific indicators. The country adopted 2015 as the base year and progress is underway to generate baseline data for the indicators. The report refers to gaps in the goal-by-goal analysis such as seasonal food insecurity, maternal mortality, access to electricity, and forest degradation and deforestation.
Integration and policy coherence
The report provides a detailed examination of country-selected SDGs: SDG 1 on no poverty, SDG 2 on zero hunger, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 5 on gender equality, SDG 6 on clean water and sanitation, SDG 7 on affordable and clean energy, SDG 8 on decent work and economic growth, SDG 9 on industry, innovation and infrastructure, SDG 13 on climate action, SDG 15 on life on land, SDG 16 on peace, justice and strong institutions and SDG 17 on partnerships for the goals. It covers the economic, social and environmental dimensions of sustainable development but has a greater focus on the economic dimension. All priorities for SDG implementation selected by the government are framed in terms of how they contribute to the economy.

Civil society validity check
A civil society report notes that the SDGs are only available in English, yet the Constitution of Zimbabwe recognises 16 official languages.

Leave no one behind
Additional data are required to meet the commitment to leave no one behind in Zimbabwe. The report notes that the country has insufficient timely and disaggregated data for most indicators, which makes tracking and monitoring progress difficult. It identifies women with disabilities, widows and children as the most vulnerable groups, though does not mention the guiding principle of leaving no one behind or efforts to target these groups specifically.

Raising awareness, creating ownership
According to the report, the Zimbabwe National Position Paper on Sustainable Development Goals aims to raise public awareness of the 2030 Agenda for Sustainable Development. Activities include an advocacy campaign involving parliamentarians, consultations and a public awareness campaign on the SDGs conducted through the media.

Civil society validity check
According to a civil society report, participation was not effective since the process was rushed, with insufficient time for civil society to effectively organise and provide meaningful inputs for the process.

Zimbabwe is committed to all of the SDGs with emphasis on the following goals listed in order of priority: SDG 8 on decent work and economic growth, SDG 7 on affordable and clean energy, SDG 2 on zero hunger, SDG 9 on industry, innovation and infrastructure, SDG 6 on clean water and sanitation, SDG 17 on partnerships for the goals, SDG 3 on good health and well-being, SDG 4 on quality education, SDG 13 on climate action and SDG 5 on gender equality. National priorities are elaborated in national development policies and strategies.

Plans are in place to strengthen the capacities of sub-national authorities to align policies and strategies at that level to achieve the SDGs.

Civil society validity check
One civil society report notes that to date initiatives on the SDGs have been ad hoc and limited to ministries at the national level. However, another civil society report mentions that through support from the United Nations Development Programme, local governments were sensitised on the SDGs to assist in developing policies.

Stakeholder engagement
According to the report, non-state actors were engaged in the identification of national priorities and preparation of the VNR report. Regarding the VNR process, the report mentions consultations and interviews as well as a SDG dialogue with civil society.

Implementing the 2030 Agenda
Zimbabwe has learned that prioritisation is key for SDG implementation. The integration and alignment of goals are essential for effective implementation, which means mainstreaming the SDGs in national development plans and budgets. Parliament plays a vital role in promoting ownership of the goals. Challenges include limited fiscal space, urbanisation, relatively low per capita allocations to enabling factors such as health and education, gaps in policy implementation and coherence, and insufficient timely and disaggregated data for most indicators. Donors provided US$800 million in 2016, which somewhat eased the tight fiscal situation in Zimbabwe. The report mentions the need to enhance the capacities of civil society and the national statistical office to contribute to the SDGs.

Partnership to realise the SDGs
A Parliamentary Thematic Committee on SDGs, which brings together chairs of portfolio committees, was established. The report makes reference to specific contributions by civil society (some noted above), the private sector and youth. There are opportunities and scope to
Progressing national SDGs implementation: Annex 3. Country Profiles

strengthen South-South partnerships by promoting regional cooperation and integration, technology transfers and knowledge sharing.

Measurement and reporting
The report does not mention data availability, but notes the need to improve the collection, analysis and dissemination of high quality, reliable and timely data disaggregated by sex, ethnicity, disability, region and other relevant characteristics. The national statistical office requires technical assistance to strengthen its capacity in terms of incorporating SDG targets and indicators into the national statistical system. The report does not outline provisions for national reporting.
